.

<sup>&</sup>lt;sup>3</sup> Net Response (NR) is computed as the difference of percentage of banks reporting increase/optimism and those reporting decrease/pessimism in respective parameter. The weights of +1.0, 0.5, 0, -0.5 and -1.0 are assigned for computing NR from aggregate per cent responses on 5-point scale, *i.e.*, substantial increase/ considerable easing, moderate increase/ somewhat easing, no change, moderate decrease/ somewhat tightening, substantial decrease/ considerable tightening for loan demand/loan terms and conditions parameters respectively. NR ranges between -100 to 100. Any value greater than zero indicates expansion/optimism and any value less than zero indicates contraction/pessimism. Increase in loan demand is considered optimism (Tables 1), while for loan terms and conditions, a positive value of net response indicates easy terms and conditions (Table 2).
