Report of the Internal Working Group on RRBs

CONTENTS

- 1. Introduction
- 2. An overview of role and performance of RRBs
- 3. Major recommendations of the earlier Committees/ Working Groups on RRBs
- 4. Factors influencing the performance of RRBs
- 5. Recommendations
- 6. Conclusion

ANNEXES – Background Papers

- A. Suggestions received during Governor's meeting with Chairmen / Nominee Directors of RRBs.
- I. Review of performance of RRBs : State-wise and sponsor bank- wise analysis
- II. Recommendations of various committees on RRBs relevant to the Terms of Reference Action taken thereon
- III. Restructuring of RRBs
- IV. Repositioning of RRBs in the credit delivery system in India: Issues and options
- V. Recapitalisation, change of sponsor bank, amalgamation and liquidation of RRBs -Legal position and possibilities
- VI. Road map for RRBs

1. Introduction

1.1 Agriculture and rural sector play an important role in India's overall development strategy in terms of income and employment generation and poverty alleviation, and great significance has therefore, been placed on developing appropriate institutions and mechanisms for catering to the credit requirements of that sector. Setting up of Regional Rural Banks (RRBs) in the mid-seventies was a major initiative in this direction. The RRBs are specialized rural financial institutions for developing the rural economy by providing credit to small and marginal farmers, agricultural labourers, artisans and small entrepreneurs. Besides the RRBs, commercial and co-operative banks have been catering to the credit requirements of the rural sector. While the commercial banks, with their focus on profitability had certain limitations in accelerating agricultural credit, the cooperative banks efforts were also hampered by several financial weaknesses. Though over the years the RRBs have been able to expand their outreach and business and meet the credit requirements of the poor, several weaknesses have emerged, eroding their profitability and viability. The recent focus of the Government of India on doubling the flow of credit to the agricultural sector has warranted a re-look at the relative roles of co-operative banks, RRBs and commercial banks. As the very objective of setting up RRBs was to extend adequate credit to the rural borrowers and particularly the economically weaker sections, owing to their rural orientation, there is a growing realization that RRBs could be used as an effective vehicle for credit delivery in the rural areas. There is, therefore a need to devise ways and means to improve the health and viability of RRBs so as to reposition them in the credit delivery mechanism in India.

1.2 In this context, as desired by the Governor, an Internal Working Group was set up within the Reserve Bank with the following members :

| Shri A.V. Sardesai, Executive Director | : | Chairman |
|--|---|---------------------------|
| Shri P. Vijaya Bhaskar, CGM, DBOD | : | Member |
| Shri K.D. Zacharias, Legal Adviser | : | Member |
| Shri S.S. Mishra, Adviser, DESACS | : | Member |
| Smt. Asha P. Kannan, Director, DEAP | : | Member |
| Shri K.K. Saraf, GM, RPCD | : | Member-Secretary |
| Shri R. Sudeep, AGM, RPCD | : | Member of the Secretariat |

1.3 The Terms of Reference of the Group were:

- To go through the recommendations made by various committees constituted in the past on the subject;
- To make a comprehensive state-wise/ sponsor bank-wise review of the performance of the RRBs, especially after the process of recapitalisation of these banks;
- iii) To explore the possibilities for restructuring of RRBs through
 - Merger/ consolidation,
 - Change of sponsor banks, and
 - Offering sponsorship of RRBs to private sector banks;
- iv) To examine the Regional Rural Banks Act, 1976 and suggest methods for carrying out the suggested restructuring possibilities;
- v) To determine the minimum capital requirements of the RRBs;
- vi) To suggest methods for better governance of RRBs; and
- vii) To suggest suitable regulation and supervision of the RRBs.

The Governor met members of the Group and indicated that in the context of the great emphasis placed by the Government of India on agricultural and rural development, the Group had been constituted in order to examine the working of RRBs and suggest various measures required to strengthen and reposition RRBs in the credit delivery mechanism.

Approach of the Group

1.4 The Group adopted a broad-based approach. Besides considering the recommendations of the earlier Committees on RRBs having current relevance, the Group held discussions with some sponsor banks of RRBs, chairmen of RRBs and members of faculty of the College of Agricultural Banking, Pune. The Group also derived benefit from the suggestions, which emerged during the Governor's meetings with Chairmen of RRBs, CMDs of sponsor banks and Nominee Directors of RRBs. These are summarised in Annexure A. The members of the Group prepared individual papers on the Terms of Reference and the suggestions/recommendations that emerged from the papers have been incorporated in this Report. The individual papers constitute Annexures I to VI of the Report. To gain first hand information of the reasons for State-wise and sponsor bank-wise divergences in the performance of RRBs, the Group requested the Regional Offices of the Reserve Bank at Mumbai, Bhubaneswar, New Delhi, Lucknow, and Patna to conduct a guick study for finding out the reasons for contrasting performances of RRBs in the States of Maharashtra, Orissa, Haryana, Uttar Pradesh, Bihar and Jharkand. Two good and two weak RRBs were selected in the States of Orissa and Maharashtra. Furthermore, two RRBs, one having good performance and the other having relatively poor performance sponsored by the same bank, viz., Bank of India and Punjab National Bank, were also selected for the quick study in other States. The Group also had detailed discussions with officials of NABARD and obtained their views on several issues as also data and other relevant information relating to RRBs.

2. An Overview of Role and Performance of RRBs

2.1 The Government of India promoted Regional Rural Banks (RRBs) through the RRBs Act of 1976 to bridge the gap in the flow of credit to the rural poor. Despite the various measures taken by the Government and the Reserve Bank through social control and the nationalisation of 14 major commercial banks, a large proportion of the rural poor remained outside the banking fold. A Working Group was appointed in 1975 under the Chairmanship of Shri M. Narsimham, to explore the possibilities of evolving an alternative rural credit agency to benefit the rural poor. The group recommended formation of a new set of regionally oriented rural banks which would combine the local feel and familiarity of rural problems characteristic of cooperatives and the professionalism and large resource base of commercial banks. Following the recommendation, RRBs were set up in 1975.

2.2 The RRBs have a special place in the multi-agency approach adopted to provide agricultural and rural credit in India. These banks are state-sponsored, regionally based and rural-oriented. The RRBs were established "with a view to developing the rural economy by providing, for the purpose of development of agriculture, trade, commerce, industry and other productive activities in the rural areas, credit and other facilities, particularly to small and marginal farmers, agricultural labourers, artisans and small entrepreneurs, and for matters connected therewith and incidental thereto" (RRBs Act,1976). Their equity is held by the Central Government, concerned State Government and Sponsor bank in the proportion of 50:15:35.

2.3 RRBs have played a key role in rural institutional financing in terms of geographical coverage, clientele outreach, business volume as also contribution to development of the rural economy. A remarkable feature of their performance over the past three decades has been the massive expansion of their retail network in rural areas. From a modest beginning of 6 RRBs with 17 branches covering 12 districts in December 1975, today, there are 196 RRBs with 14,446 branches working in 518 districts across the country . RRBs have a large

branch network in the rural area forming around 43 per cent of the total rural branches of commercial banks. The rural orientation of RRBs is evident from the fact that their rural and semi-urban branches constituted over 97 per cent of their branch network.

2.4 RRBs, with their wide outreach in rural India, region-centric banking activities and close relationship with the local authorities and population, were expected to cater to the credit requirements of the rural areas and provide necessary banking infrastructure. Though the RRBs have been able to mobilize small savings of the rural sector, they have been relatively less successful in enhancing the flow of credit to the targeted rural poor.

2.5 Aggregate deposits of RRBs increased from Rs.4,151 crore in 1990 to Rs.56,350 crore by March, 2004 owing mainly to their geographical spread and opening of new branches in unbanked areas. The advances of RRBs increased from Rs.3,554 crore to Rs.26,114 crore during the above period. Notwithstanding the sharp increase, RRBs advances constituted just around 2 per cent of the banking systems credit portfolio. The share of RRBs in total agriculture credit (given by scheduled commercial banks, cooperatives and RRBs) has remained at around 9 per cent, despite their strong rural outreach. The average per branch advances increased from Rs.25 lakh in March 1990 to Rs.154 lakh in March 2003. There are wide state-wise differences in credit deployment by RRBs.

2.6 During the year 2003-04, 163 RRBs earned profits amounting to Rs.953 crore while 33 RRBs incurred losses to the tune of Rs.184 crore. Ninety RRBs had accumulated losses as on March 31, 2004. Aggregate accumulated losses of RRBs amounted to Rs. 2,725 crore during the year 2003-04. Of the 90 RRBs having accumulated losses, 53 RRBs had eroded their entire owned funds and also a part of their deposits (i.e., to the extent of Rs.1,660 crore or 11.75 per cent of the total deposits of these banks).

2.7 The percentage of recovery to demand has progressively improved in the RRBs from as low as 57 per cent as on June 30, 1997 to more than 75 per cent as on June 30, 2003. The percentage of gross NPAs which was as high as 27.8 per cent as on March 31, 1999 declined to 12.6 per cent during the year ending March 31, 2004. NPAs in absolute terms stood at Rs.3,299 crore as on March 31,2004. 103 RRBs had percentage of gross NPAs less than the national average, while 93 RRBs had NPAs more than the national average. The Credit- Deposit (CD) Ratio stood at 46.3 per cent as on March 31, 2004. There were 50 RRBs having CD ratio of more than 60 per cent as on that date while 87 banks had a ratio of less than 40 per cent.

3. Major Recommendations of the Earlier Committees/ Working Groups on RRBs

3.1 During the 30 years of existence of RRBs, several Working Groups and Committees were set up at various points of time to deliberate on issues relating to RRBs and suggest measures to address the same. The focus has varied over time depending on the immediate concerns and the prevailing policy regime. While some of the issues relating to RRBs have lost their significance over time, others have become more relevant. Some of the recommendations of earlier committees which continue to be important in the context of repositioning of RRBs in the credit delivery system were examined afresh by the Group.

3.2 Some of the important recommendations currently relevant are as follows:

- The Board of Directors of RRBs should have district development officials, persons with local knowledge and bank officials so as to have a proper mix of technical, banking and local needs/ aspirations.
- Chairman should be appointed by the Board of RRB, with the concurrence of RBI.
- Small and uneconomic RRBs should be merged in the interest of economic viability.
- There is a need for professionalisation of the Boards of RRBs.
- Adequate autonomy should be given to the Board of Directors for decisions on all matters relating to business and staff matters, without having to refer to apex authorities.
- Very weak RRBs may be viewed separately and possibility of their liquidation be recognized.
- Role overlap between RBI, NABARD and Sponsor banks should be avoided
- Deputation of staff from surplus to deficit RRBs, outsourcing and redeployment of staff, to manage manpower surplus/shortage in different RRBs may be considered
- The entire system of RRBs may be consolidated, while retaining the advantages of regional character of these institutions. As part of the process, some sponsor banks may be eased out.
- In the post-consolidation scenario, RRBs may be permitted to set up currency chests.
- Each RRB must evolve its own operational policies, including those on staff matters. They should also undertake exercises on succession planning and age group analysis of their staff to take care of the large-scale vacancies in the near future.

4. Factors influencing the performance of RRBs

4.1 Since their inception, the financial health of RRBs has been indifferent. A host of factors, both internal and external, have had a bearing on the performance of RRBs. Some of the major factors that had a bearing on the performance of RRBs are as follows:

- i) Area of operation: The RRBs are constrained in their operations by their limited area of operation. This coupled with their narrow base of business activities and the low clientele base, has resulted in high risk exposure of RRBs.
- ii) Clientele base: The customers of RRBs comprise small and marginal farmers, smallscale sector, small transport operators, SHGs, etc., whose credit requirements are mostly small. RRBs are unable to cross-subsidise their lending business as they do not generally provide credit to wealthy borrowers with large needs, thereby affecting their capacity to earn higher incomes.
- iii) Capital base: RRBs as a group have a low capital base, and their authorised capital of Rs.1 crore places serious limitations on their business size. Furthermore, in the case of some of the RRBs their deposit liabilities are very large compared to their capital base. For instance, as as on March 31, 2004 while 2 RRBs had deposit liabilities of over Rs 1,000 crore, 24 RRBs had a deposit base ranging between Rs.500 to Rs.1,000 crore, and 146 RRBs had deposit liabilities between Rs.100 to Rs.500 crore. In view of their low capital base, in the event of inefficient use/misuse of funds resulting in a financial problem, the stakeholders would have to bail out the bank.
- iv) Organisational structure: The size of financial assets, as well as linkages which are necessary for effective banking services has been limited by the small organisational structure of RRBs. This has also come in the way of growth in business volumes and garnering a larger share of the rural financial market.
- v) Loan delinquencies: RRBs loan recovery rates have declined over the years, resulting in a large over hang of NPAs (around Rs.3,200 crore) as discussed earlier, which has come in their way of recycling funds and increasing the flow of credit to the rural sector. The directed lending policy for RRBs has resulted in low quality of assets. This coupled with high cost of funds and below cost interest rates on loans has led to high accumulated losses and piling up of bad assets in the case of many RRBs.
- vi) **Cost structure:** RRBs are characterized by high cost of servicing numerous small accounts and high wage cost. Furthermore, RRBs get credit from sponsor banks and

refinance from NABARD at rates of interest higher than the market rates. This places limitations on their ability to reduce the rates they charge to their ultimate borrowers, although they are compelled to do so on account of competition from banks.

- vii) **Perceived as specialised bank:** There has been an uneven growth of RRBs due to the diffusion in the perceived objectives of RRBs over time. Despite the pressures of credit expansion, improvement in recovery performance, profit orientation and strict compliances to banking norms, the general perception has been that RRBs have got only social objectives, without any viability consideration, which has to be changed.
- viii) *Financial management skills:* Poor financial management skills, coupled with pressures from various quarters (like sponsor banks) appears to have resulted in inefficient allocation of resources by RRBs which in turn is reflected in the high incidence of NPAs and parking of large funds with sponsor banks (policy changed in 2002-03).
- ix) Staff structure: Limited exposure and lack of appropriate training, has resulted in RRBs staff lacking the necessary skills and capacity to cater to the changing requirements of the rural sector. Furthermore, the ban on recruitment has also resulted in ageing staff structure constraining efficiency in operations. Uniform norms and personnel policies have been applied to RRBs through out the country ignoring local touch thereby causing staff unrest, poor industrial relations, innumerable litigations and lowering of staff morale as also their involvement with the development tasks (Rao Committee, 2002).
- x) Dependence on sponsor banks: Another weakness observed in the case of RRBs is their failure to adequately integrate with the financial markets of the country due to their heavy dependence on sponsor banks for financial/ business initiatives. RRBs are also some times perceived as potential competitors, due to the presence of the sponsor banks in the same area of operation. Despite the best intentions at the policy levels in sponsor banks, the RRBs have suffered at the ground level wherever there has been any conflict of business interests of RRBs and their sponsor banks. RRBs have therefore, not been able to establish systems and procedures required for providing efficient services to their clients, as also for efficient management of their financial resources.
- xi) Professionalism in management: The Chairmen of most of the RRBs are from sponsor banks, which limits the freedom and decision making capacity of the RRBs. Even for small matters RRBs have to refer to their sponsor banks, which leads to delay in decision-making and reduces efficiency. Furthermore, the Board of Directors

of RRBs may not always function effectively as some of the members do not have necessary skills and expertise to take important financial decisions.

xii) *Erosion of deposits:* In the case of few RRBs, there has also been an erosion of public deposits, besides capital.

4.2 Besides the above, functioning of RRBs has also been affected by certain legacy problems and policy constraints. The administered interest rate regime prevalent in the system for a considerably long time influenced the performance of RRBs. These banks were required to lend at low interest rates as they were financing the weaker sections and at the same time allowed to pay a slightly higher rate of interest on deposits.

4.3 The RRBs were required to maintain their local character or flavour with a view to identifying more with the rural populace. This was initially embedded in the wage structure designed for these banks. However, the change in the wage structure of RRBs by bringing them on par with the commercial banks led to higher wage costs, thereby affecting the performance of these banks.

4.4 To address the problem of poor performance of the RRBs, several RRBs were recapitalised between 1994-95 to 1999-2000. Simultaneously, prudential guidelines were made applicable to them and certain restrictions were imposed on them with a view to improving the quality of their assets and ensuring better recovery of loans. This affected the flexibility of the banks, which were already reeling under severe operational difficulties. It would appear that the performance of RRBs cannot be judged on the basis of the same parameters as applicable in the case of commercial banks, without taking into account the policy and administrative constraints impinging on their performance.

4.5 A quick study carried out by a few Regional Offices of the Rural Planning and Credit Department has revealed that the factors leading to positive performance of RRBs can be summed up as follows:

- Reduction in cost of funds increase in low cost deposits;
- Expansion of credit portfolio;
- Leadership provided by the Chief Executive and the Board;
- Higher staff and branch productivity; and
- Low level of NPAs.

5. Recommendations

5.1 The RRBs, set up with the intention of extending credit to the rural poor, have succeeded in the objective of taking banking services to the villages, but have failed to make a clear dent on credit to the rural poor during the past 30 years of their existence. This has to be viewed in the context of the policy framework for rural development adopted in India with focus on income and employment generation and poverty alleviation. The renewed emphasis on agricultural and rural development by the Government of India would lead to a growing demand for different types of financial services in the rural areas, as the financial needs of the rural economy become diversified. The present structure of rural credit may not be able to fully cater to the same. The cooperative credit structure suffers from many infirmities and, hence, the RRB network will have to be leveraged for benefitting the rural areas. RRBs, therefore have to provide a larger share of credit disbursed calling for much larger resource mobilization as also greater efforts for their institutional strengthening. Thus, on the one hand, the concept of RRBs has to be pursued in the interest of the rural economy and on the other, the RRBs have an opportunity to cash in on the gap between demand and supply of banking services.

5.2 The Group examined various alternatives available within the existing legal framework for strengthening and improving the health of RRBs and converting them into viable rural financing institutions. The suggestions/options of the Group are given below. They form a comprehensive package of measures and may not yield the desired effect if implemented in isolation.

Restructuring Options

i) Merger/ Amalgamation

5.3 There is a large variation in the number of districts covered and the branch network of the RRBs. While 47 RRBs cover only one district each, 111 RRBs cover 2-3 districts, 29 RRBs 4-5 districts and 9 are operating in 6-9 districts. Similarly, 72 RRBs have up to 50 branches, 87 RRBs have 51-100 branches, 21 RRBs have 101-150 branches and 16 have more than 150 branches.

5.4 As many as 6 sponsor banks have only one RRB sponsored by them. While 11 sponsor banks have 2-4 sponsored RRBs, 3 sponsor banks have up to 10 RRBs and 8 sponsor

banks have more than 10 RRBs sponsored by them in various States. Of these, only 2 sponsor banks have more than 20 RRBs.

5.5 To improve the operational viability of RRBs and take advantage of the economies of scale (by reducing transaction cost, etc.), the route of merger/amalgamation of RRBs may be considered taking into account the views of the various stakeholders. The merged entities will have a larger area of operation and the merger process will help in strengthening some of the weak RRBs. The following options are available :

- Merger between RRBs of the same sponsor bank in the same State.
- Merger of RRBs sponsored by different banks in the same State.

The process will bring down the number of RRBs and make it more convenient for the sponsor banks to manage the affairs of the RRB. Merger of RRBs with the sponsor bank is not provided for in the RRBs Act 1976 and further, such mergers would go against the spirit of setting up of RRBs as local entities and for providing credit primarily to weaker sections.

ii) Change of Sponsor Banks

5.6 An analysis of the performance of RRBs has revealed that there has been variations in their performance across the States and sponsor banks. While performance of RRBs under some sponsor banks are markedly better than those under the others, the Group is of the view that a change in sponsor banks may in some cases help in improving the performance of RRBs. A change in sponsorship may inter alia improve the competitiveness, work culture, management and efficiency of the concerned RRBs. For this, new banks-both public and private sector banks- could be considered.

5.7 The RRBs Act, 1976 does not specifically provide for the transfer of sponsorship from one sponsor bank to another. However, provisions have been made under Section 23 A of the Act for the Central government to effect amalgamation of Regional Rural Banks. Accordingly, the Central Government may, after consultation with the National Bank, the State Government concerned and the Sponsor bank amalgamate two or more RRBs into a single RRB in the public interest or in the interest of development of the area served by the RRBs or in the interest of RRBs themselves by notification in the Official Gazette. The constitution, property, powers, rights and liabilities of the transferee (the amalgamated entity) shall all be as specified in the Notification. The Government may, in the process of amalgamation, consider bringing in new banks, as mentioned in Para 5.6, as sponsors of the merged RRBs.

iii) Balance sheet strengthening

5.8 The merged entities and the existing RRBs that have accumulated losses can be capitalized to wipe out the loss and satisfy the minimum capital requirement. The additional capital shall be subscribed in the same proportion as the issued capital by the different stakeholders, as provided in the RRB Act, 1976.

iv) Other options

5.9 For those RRBs which do not turn around within a specified time limit, say 3 years, an exit route may be considered subject to extant legal provisions. The fact that there could be an exit route may be made explicit, so that all the stakeholders are aware and well prepared for the same.

Minimum capital requirements

5.10 RRBs are public entities with the avowed objective of providing credit in rural areas to small and marginal farmers, artisans, etc. The fundamental principle that owners' stake in business should be in proportion to the size and risk of the business should be observed. At present there is no capital to risk weighted asset ratio (CRAR) prescription for RRBs. Thus, RRBs could be advised to maintain a desirable level of capital adequacy. However, it is felt that while RRBs are required to maintain CRAR, the ratio may not be as high as that of commercial banks and may be initially kept at 5 per cent as about 100 RRBs are falling short of 5% CRAR. Over time, they may be expected to align themselves with the Basle I norms. The level of additional capital required for various levels of CRAR are indicated below.

| | 3% | 5% | 8% |
|--|------|------|------|
| Number of RRBs not meeting CRAR of | 87 | 98 | 111 |
| Additional capital required for meeting CRAR at (Rs. in crore) | 2840 | 3050 | 3430 |

(As on March 2004)

5.11 To wipe out accumulated losses, provide for the NPAs, and maintain 5 per cent CRAR for the RRBs in the existing scenario, capital to the extent of around Rs.3,050 crore would have to be infused with appropriate conditionalities. The capital to be infused is to be shared

by the stakeholders as per the respective proportions as provided in the Act. RRBs having CRAR more than 5 per cent and making profits in the last 3 years and having no accumulated loss may be allowed to raise funds by way of instruments in the nature of Tier II capital also.

Governance and Management

5.12 Various issues pertaining to governance, business development, human relations and other aspects were examined by the Group and the following measures could be considered for addressing these issues:

- i) As the Chairmen of RRBs are from the sponsor bank, there could be several potential areas of conflicts of interest. In this context, the process of appointment may be reexamined to explore the possibility of appointing a Chairman from the open market through a transparent process.
- ii) The lack of freedom to take any commercial decisions has resulted in apathy of the Boards towards the RRBs (Khusro Committee, 1989). The Committee also noted that Boards of RRBs did a poor job of monitoring their performance because they did not have any interest in the affairs of the bank. Some of the earlier committees on RRBs have emphasized the need for professionalisation of the Boards of RRBs. It has also been observed that in certain cases appointees not familiar with technical and operational aspects of banking and finance were inducted in the Boards of RRBs. For strengthening the Boards of RRBs, the composition of the Board may be changed. This could be done by making the Board broad-based through inducting professionals such as agricultural experts, bankers, management experts, etc.
- iii) One of the constraints in improving the performance of RRBs is the relatively unskilled and ageing staff structure. To address this, an appropriate recruitment policy providing for greater flexibility and freedom may be required for RRBs. This would enable them to recruit competent and skilled staff from the open market.
- iv) The sponsor bank should provide appropriate advice in the matters relating to human resources management viz., promotions, posting, transfer, etc., in order to enable them to deal with all situations arising out of restructuring of these banks mentioned above.

- v) The sponsor bank may consider posting appropriate number of specialized staff to help the RRBs in professionalising their advances portfolio, risk management, etc.
- vi) The Chairman and other officials posted in RRBs may have a fixed tenure of 3-5 years to ensure continuity in planning and execution of various policies.
- vii) There is at present no adequate incentives for managers and staff of RRB to put in greater efforts to convert their branches into profit centres. An appropriate incentive structure and career planning may be evolved to increase the productivity and profitability of RRBs.
- viii) In order to improve the productivity and efficiency of the employees of RRBs, relevant training, especially in areas like skill upgradation and information technology, may have to be provided to them. This would also enable them to take up new activities with the newly acquired skills.
- ix) In order to meet the challenge of increasing the credit dispensation and to bring about greater efficiency in operations, RRBs may consider introduction of new products and also streamline their business processes.

Regulation and Supervision

5.13 In terms of the Banking Regulation Act, 1949, the powers relating to inspection 'as exercisable by the Reserve Bank in relation to RRBs, are exercised by NABARD without prejudice to the exercise of such powers by the Reserve Bank in relation to any RRB whenever it considers necessary to do so'. This was done on the recommendations of Committee to Review Arrangements for Institutional Credit for Agriculture and Rural Development (CRAFICARD) for the reason that it would be convenient to entrust the work of statutory inspection and its follow up to NABARD, which in any case has to undertake assessment on similar lines of the institutions financed by it (as stated in Appendix-III of the report of CRAFICARD). However, there is a clear distinction between the supervision to ensure that the affairs of the RRBs are carried out in a manner which is not detrimental to the interests of the depositors, and that done by a refinancing institution to satisfy itself that the on-lending operations have been conducted with due care and diligence. There could also be situations where potential conflicts of interest may arise between the supervisory and developmental functions of NABARD. By virtue of the provisions of RBI Act 1934, certain

responsibilities are cast upon RBI in the case of scheduled banks. RRBs, by inception are scheduled and hence it would be appropriate if both the regulatory and supervisory functions relating to RRBs are exercised by the RBI.

Improving profitability

5.14 RRBs, to be on a sustainable business model in the long run, need risk management tools (including ALM), albeit on a less sophisticated scale as compared to commercial banks. Certain basic guidelines on risk management may, therefore, be made applicable to them. Furthermore, to facilitate their balance sheet management, RRBs may be encouraged to employ certain instruments like Certificates of Deposit / Inter-bank Participation Certificates, etc., wherever necessary.

5.15 To increase their non-interest income, RRBs may be encouraged to actively consider distribution of products of mutual fund/insurance companies, etc. and also participate in referral arrangement therefor. RRBs could also focus more on other non-fund based business like offering consultancy services to farmers, issuing drafts, etc.

5.16 In order to improve profitability and productivity, RRBs may rationalize their branch network.

5.17 With a view to increasing the avenues for credit deployment, RRBs may be encouraged to participate in consortium lending within their area of operation.

5.18 State Governments may consider empowering RRBs to collect their taxes.

5.19 RRBs may strengthen their recovery mechanism with necessary support from the State Governments.

5.20 RRBs may be considered for currency chest facility.

5.21 New initiatives are being taken in rural areas by institutions/ organizations which are active in rural development. RRBs may actively consider fostering links with such organizations to provide avenues for innovative financing.

6. Conclusion

6.1 After nearly three decades of existence, the RRBs are facing many constraints warranting an over haul and a serious consideration on the part of the policy makers for their strengthening. In order to reposition the RRBs as effective instruments within the existing legal framework, a number of options have been explored in the Report by the Group which includes merger / amalgamation, change of sponsor banks, balance sheet strengthening, maintaining minimum capital, governance and management issues, regulatory and supervisory aspects and methods for improving profitability of RRBs. These options are not mutually exclusive, but complementary to each other. In the context of the need to increase rural credit and to deliver better services in the rural areas there is a sense of urgency to reposition the RRBs in the financial system. Only then can RRBs meet the expectations of becoming vibrant rural financial institutions capable of meeting the growing requirements of rural India.

Review of performance of RRBs - State wise and Sponsor Bank wise analysis

1. INTRODUCTION

1.1 The Regional Rural Banks (RRBs), with focus on serving the rural areas, form an integral segment of the Indian banking system. As on 31 March 2004, 196 RRBs operated with a network of 14446 branches covering 518 districts. Most of the branches of the RRBs, constituting more than one third of the total rural branches of all the scheduled commercial banks, operate in rural areas.

1.2 RRBs are jointly owned by Government of India, the concerned State Government and Sponsor Banks (27 Scheduled commercial banks and one State Cooperative Bank). The issued capital of a RRB is shared by them in the proportion of 50%, 15% and 35% respectively. The RRBs grant loans and advances mostly to small and marginal farmers, agricultural labourers and rural artisans.

1.3 The State wise and Sponsor bank wise distribution of RRBs is as under:

| 21 | RAJASTHAN | 14 | 21 | S.B.P | 1 | |
|-----|---------------|-----|----|-----------------|--------|--|
| 22 | TAMILNADU | 3 | 22 | S.B.S | 3 | |
| 23 | TRIPURA | 1 | 23 | SYNDICATE | 10 | |
| 24 | UTTAR PRADESH | 36 | 24 | U.B.I | 11 | |
| 25 | UTTARANCHAL | 4 | 25 | UCO BANK | 11 | |
| 26 | WEST BENGAL | 9 | 26 | U.P.S.C.BANK | 1 | |
| | | | 27 | UNION BANK OF I | NDIA 4 | |
| TOT | AL | 196 | | TOTAL | 196 | |

1.4 The 196 RRBs spread over 518 districts vary widely in coverage and size. While 45 RRBs cover just one district each, 109 cover 2-3 districts each, 29 RRBs services 4-5 districts while 13 RRBs have a service range of 6-9 districts each. Further, 70 RRBs have up to 50 branches each, 109 RRBs have between 51-150 branches each, while 17 RRBs have over 150 branches each. The rural and semi urban branches of RRBs constitute 98% of their branch network.

1.5 RRBs have witnessed far-reaching changes in their functioning since the introduction of the banking sector reforms as part of the financial sector reforms. RRBs which were lending only to target groups were allowed to finance non-target groups to the extent not exceeding 40% of their incremental lending w.e.f. 12.9.1992 which was subsequently enhanced to 60% w.e.f. 1.1.1994. Lending targets under Priority Sector at 60% was also fixed effective from the year 2003-04.

A brief description of the working results of RRBs is presented in the following paragraphs, State wise and Sponsor Bank wise. The state wise and sponsor bank wise details of the parameters mentioned below are given in Annexures A & B respectively.

31. Restructuring of RRBs- Recapitalisation support

31.1 As a part of comprehensive restructuring programme, recapitalisation of RRBs was initiated in the year 1994-95. The process continued till 1999-2000 and covered 187 RRBs with aggregate financial support of Rs.2188.44 crore from the shareholders (Gol/Sponsor Banks/State Governments). While Government of India and Sponsor Banks have fully released their share (50% and 35%) of recapitalisation amounting to Rs.1860.16 crore to all the selected RRBs, 3 State Governments had not released Rs.24.90 crore, their proportionate share in respect of 9 RRBs as at end of February 2005. The details are as under:

| SI.N o | State | No. of RRBs | Amount to be released (Rs. in crore) |
|-----------|--------|----------------|--------------------------------------|
| 1 | Assam | 5 | 14.37 |
| 2 | Jammu& | 3 | 4.53 |
| 3 | Orissa | 1 | 6.00 |
| | Total | 9 | 24.90 |

Of the total 187 RRBs recapitalised earlier, 99 RRBs has turned around as on March 2004. These 99 RRBs were not having accumulated losses, had positive net worth and profits during the last two years. The State wise and sponsor bank wise details of RRBs in this regard is furnished in Annexure E & F respectively.

Of the total 163 banks that earned profit of Rs.952.33 crore in 2003-04, 158 had been recapitalised earlier. The profits earned by these 158 banks as on March 31, 2004 amounted to Rs. 927.70 crore.

Out of the 33 RRBs that had recorded losses to the tune of Rs.183.65 crore during 2003-04, 29 RRBs were recapitalised earlier. The loss recorded by these 29 banks were to the tune of Rs. 149.36 crore as on March 31, 2004.

Of the ninety RRBs that were having accumulated losses to the tune of Rs.2725.35 crore as on March 31,2004, 83 had availed recapitalisation benefits earlier. The accumulated loss of these 83 RRBs were to the extent of Rs. 2309.86 crore as on March 31, 2004.

As on March 31, 2004, the gross NPA in absolute terms was Rs.3298.66 crore, of which Rs. 3146.05 crore (95.37 %) pertained to the 187 RRBs recapitalised earlier.

Annexure-A

Annexure II

Recommendations of various committees on RRBs relevant to the Terms of Reference – Action taken thereon

| SI No. | Recommendation | Made by | Action taken |
|-----------|---|--|--|
| 1 | Establishment of RRBs. | Working Group on | 1. RRBs established in 1976 |
| 2 | Emphasis on viability with recognition that in initial years the rural bank might suffer losses. | Rural Banks, 1975 (Narasimham Committee) | 2. Viability is being emphasised now; 163 RRBs reported profit and 33 in loss as of 31 March 2004. |
| 3 | A certain degree of flexibility of operation may be permitted with exemption in existing banking laws and regulations. | | 3. The RRBs enjoyed initial exemptions as a matter of policy in respect of regulatory norms. However, in the wake of financial sector reforms, the RRBs are now being subjected to same regulatory norms as commercial banks. |
| 4 | The qualitative and quantitative dimensions of the credit gap are so large that neither the commercial banks nor cooperatives would be able to fill them up. RRBs are needed to make good some of the inadequacies in the existing rural credit system and they should become an integral part of rural credit structure. | The Committee on Rural Banks, 1978 (Dantwala Committee) | 4. The number of RRBs has gone up to 196 in 1987 and this expansion made RRBs an integral part of rural credit delivery system. |
| 5 | Board to have district development officials, persons | | 5. Amendments in 1988 in RRBs Act resulted in induction of two non-official directors in the boards of RRBs. |

| | with local knowledge, bank officials so as to have a proper mix of technical, banking and local | |
|---|---|---|
| 6 | needs/aspirations. Chairman to be appointed by the Board of RRB with concurrence of RBI. | 6. The chairmen of RRBs were appointed by Gol in consultation with RBI. On formation of NABARD, this was in consultation with NABARD. Later on, Sponsor Banks were empowered to appoint Chairmen in consultation with NABARD. |
| 7 | A separate institution for training needs of RRBs may be set up by sponsor banks. | 7. Sponsor Banks set up the Training Centres with focus on RRB staff. However, in due course of time, NABARD set up BIRD for focused training of officers of RRBs. |

| 9 | The losses incurred by a RRB should be made good annually by the shareholders in the same proportion of their shareholdings. In areas where the terrain is difficult, the accessibility is limited, the area itself requires further monetisation and particularly all families belonging to weaker sections in the North Eastern Region, the approach to RRB may have to be different and it mat be allowed to cover larger areas and also finance all the categories of borrowers fro all purpose. | Committee to Review Arrangement s for Institutional Credit for Agriculture and Rural Development (CRAFICAR D), 1981 | 8. This was not accepted. However, under the ascheme of recapitalisation, financial support was provided by the shareholders in the proportion of their shareholdings. 9. In the course of time, RRBs have been allowed financing all categories of borrowers. |
|---|--|---|--|
|---|--|---|--|

| 10 | Small and uneconomic RRBs to be merged in the interest of economic viability. Accumulated losses of RRBs to be shared by the shareholders in the form of grants to RRBs in proportion of their equity holding. | Working Group on RRBs (Kelkar Committee), 1984 | 10. The issue of merger of RRBs is under consideration of the Government of India. 11. Not implemented. However, under the ascheme of recapitalisation, financial support was provided by the shareholders in the proportion of their shareholdings. |
|----|---|---|---|
| 12 | The weaknesses of RRBs are endemic to the system and non- viability is built into it, and the only option was to merge the RRBS with the sponsor banks. The objective of serving the weaker sections effectively could be achieved only by self-sustaining credit institutions. | Agricultural Credit Review Committee, 1989 | 12. This recommendation was not accepted. |

| 13 | Evolve a rural banking structure, which would combine the | Committee on Financial System | 13. The concept of Local Are Banks was brought in, albeit with limited success. |
|----|--|-------------------------------------|---|
| | advantage of the local character | (Narasimham | However, the |
| | of the RRBS and the strength | Committee), 1991 | recommendation of rural subsidiaries of commercial |
| | and organization/ managerial | | banks was not accepted. |
| | skills of the commercial banks. | | |
| | The Committee saw the solution | | |
| | in the form of rural banking | | |
| | subsidiaries of public sector | | |
| | banks. | | |
| 14 | It was left to the RRBs and their | | |
| | sponsor banks as to whether the | | 14. Not implemented. |
| | RRBS should retain their | | |
| | separate identity or be merged | | |
| | woth such subsidiaries. | | |
| | | | 15. Over a period of time, |
| 15 | To impart viability to the | | RRBs were allowed to |
| | operations of RRBs, they should | | |
| | be permitted to engage in all | | finance non-target group, |
| | | | non-farm sector and non- |
| | | | |

Restructuring of Regional Rural Banks

Regional Rural Banks (RRBs) were introduced and promoted by the Government of India with the noble objective of promoting savings habits and providing credit delivery mechanism to the rural India. The target groups were small and marginal farmers, agricultural labourers, artisans and small entrepreneurs for development of agriculture, trade, industry and other commercial activities in rural India. RRBs have wide reach in rural India and with their region-centric banking activities and closer relationship with the local authorities and population, they were expected to provide necessary banking infrastructure. They cover 516 districts across the country operating through 14443 branches and account for 43 per cent of the total rural branches of the scheduled commercial banks. They have been successful in mobilizing small savings in the rural sector.

However, RRBs as a credit delivery channel to the targeted rural poor seems to be less successful. Their credit growth measured in terms of Credit-Deposit ratio and in terms of yearly growth rates indicate a clear slow down. There could be various impediments in reaching its objectives. It is generally recognized that the following factors are major disabling factors:

The target rural group has been one of the most weaker and lowest strata of the Indian society. Smaller and marginal farmers and agricultural labourers always run short of money even for meeting their daily needs of life. Given the fact that most the villages in India still does not have clean drinking water and sanitation facilities, top it with lack of basic health facilities, makes them one of the most vulnerable groups in India. In any nature-made or man-made calamities, they are the most affected.

Thus, credit facilities taken by the rural poor are mostly not utilized for specified productive objective for which it was made available. For instance, when an agricultural labourer takes a small loan from an RRB for the purpose of buying a cow and small portion of it only being utilized for the stated purpose, with the remaining amount used for household needs or for tending the sick. Such misappropriation seems very common and ultimately the labourer who took the loan would be unable to repay it. This naturally leads to substantial non-performing and lost assets in RRBs.

This is further substantiated by the strong correlation between the accumulated loss of RRBs as percentage of gross loan and head-count poverty ratio. Figure 1 above presents the scatter-plot for the two variables, based on 1991 poverty ratio. The correlation between the accumulated loss and poverty ratio is 0.35. After excluding the two outlying observations, the correlation turns out to be 0.45, which is statistically significant. Thus, states with lower levels of incidences of poverty have lower accumulated losses and, naturally, the overall health of RRBs in such states are better than their counterparts in states with much higher incidences of poverty. For instance, RRBs in states with lower poverty ratio such as Haryana, Punjab, Gujarat, Karnataka have substantially lower accumulated loss as compared to their counterparts in Tripura, Madhya Pradesh, Bihar and Orissa.

This indicates that the problem faced by RRBs in terms of lower credit, lower recovery rates and higher accumulation of losses are highly reflective of the socio-economic background of their operations.

Further, by curtailing of any of the present activities of RRBs amounts to curtailing one important channels of reaching out to the rural poor. Thus, despite substantial difficulty in meeting the needs of RRBs by regularly pumping money through capital infusion into these entities, there is a need to strengthen the existing system of RRBs.

Factors of nonperformance of RRBs: A statistical analysis

In order to understand the difficulties faced by RRBs in a rigorous fashion, it seems appropriate to look at them based on their past performance both in terms of standard financial ratios and also based on statistical models. Towards this, first we look at the financial ratios of 16 RRBs which have been making consistent performance in terms of net profit during a financial year. There are 16 RRBs which have made net losses during last three years (2001-02, 2002-03 and 2003-04). We also select top 16 profit making banks during 2003-04. Tables 1-2 present financial ratios such as CD ratio, operating

profit, net profit, net interest income, all as percentages of total assets. Salient observations based on these financial ratios are the following:

Credit-Deposit ratios of profit making banks are much higher than loss making banks. Average CD ratio of the former in 2003-04 was 56.3 per cent while that of loss making banks was at 37.7 per cent. Also, average CD ratios of profit making banks have improved substantially across the years. Average CD ratio of profit making RRBs was at 48.7 per cent in 2001-02, which increased to 53.1 per cent in 2002-03 and further to 56.3 per cent in 2003-04. For loss making banks, it has been stagnant around 37.7 per cent, with a tendency to decline.

For profit making banks, both operating profits and net profits (excluding profits carried over) have been increasing. However, for loss making banks, such a pattern has not been visible.

Further, net interest income as percentages of total assets, which is one of the most important indicators of health of a bank capturing the available spread, has been stable at 4.6 per cent for profit making banks. However, for loss making banks, this important ratio is stagnant at a much lower level of 0.9 per cent.

In order to analyse major reasons for what makes an RRB perform badly which results in poor spread and thus negative overall profitability, it is essential to look at expenditures incurred in terms of interest expenditure and operating expenditure. Tables 3-4 present important expenditure indicators for both the set of selected banks. Salient features are the following:

Loss making RRBs incur comparatively lower expenditure towards interest payments than their profit making counterparts.

There has been marginal increase in operating expenditure as percentage of total expenditure for both the set of banks with loss making RRBs incurring much higher operating expenditures.

One of the major reasons for making a bank loss making one is the increasing wage bill, which as percentage of total expenditure for profit making RRBs increased from 24.8 per cent in 2001-02 to 25.4 per cent in 2002-03 and marginally declined to 25.0 per cent in 2003-04. However, the respective numbers for the loss making RRBs were 29.2 per cent, 35.7 per cent and 32.4. Thus, even though there is a marginal decline the total wage bill during 2003-04, it is still higher for loss making RRBs. Besides, wage bill as percentages of operating expenditure has been more or less stagnant and much higher for this group.

Thus, even though they have lower interest expenditure, loss making RRBs incur much higher wage bills. This, along with lower credit off-take and narrow net interest income, hurt the bottom line of loss making RRBs and further deteriorate their health.

It is worthwhile to look at the problem statistically and analyse net profit of profit making and loss making RRBs separately in terms of major profitability ratios and expenditure ratios. For this exercise, any RRB with net loss (excluding accumulated profit/loss) during 2003-04 is considered as a loss making one and, a profit making bank otherwise. Objective here is to identify most prominent factor that makes a bank sick. The regression equations are the following: Loss making banks: Net profit for 2003-04 =0.22 + 0.71 Net interest income for 2003-04 (0.33) (6.29) + 0.4 Other expenses for 2003-04 - 1.07 Wage bill for 2003-04 (1.78) (-4.80) DW statistic: 1.51 Profit making banks: Net profit for 2003-04 = 0.54 + 0.84 Net interest income for 2003-04 (1.68) (12.66) - 0.77 Other expenses for 2003-04 - 0.74 Wage bill for 2003-04 (-3.54) (-6.96)

DW statistic: 2.1

Here, 'Other expenses' stands for operating expenses other than wage bill. All variables are taken as percentages of total assets. Figures in parentheses indicate respective t-values.

The most significant observation based on these models is the effect of wage bills. Both for profit making banks and for loss making banks, wage bills play a statistically significant role in net profits with a negative sign, rightly indicating that it reduces profitability substantially. Also, net interest income (spread) plays a positive role in net profit. However, for profit making banks, other expenses other than wages also play important role in profitability; this is not the case with loss making banks. In terms of t-values, the most significant variable is net interest income followed by wages. In this context it may be mentioned that high wage expenditure and low interest income were not entirely the result of the internal functioning of RRBs but in part, it devolved on them from outside by way of wage settlement for the sector and administered interest rates prevailing in the past – legacy issues.

In the light of the above, to make the functioning of RRBs more economically viable, a two-pronged approach can be adopted. First, providing good trainings on banking & finance, costing, IT, Business Management etc. would enhance the productivity and efficiency of the employees enabling them not only to streamline the present work areas (work process reengineering) but also to take up new activities with the newly acquired skill. These efforts would translate into better profit commensurate with pay bill. Second, fresh recruitments can be restricted when the process of normal retirement will commence in near future (most of the staff and officers were recruited during 1975). Use of IT in larger RRBs (with more than 100 branches – about 40) may lead to better assessment of credit risk, monitoring and transparency thus profit. Since the operations of RRBs are similar, a common software package can be developed for the sector taking advantage of economy of scale.

It is observed that for loss making RRBs, the ratio of net interest income to total assets is far lower at 0.9% while for profit making RRBs the ratio is 4.6%. This fact has been further corroborated by above statistical models. Thus to boost their profitability, RRBs may be allowed flexibility in their business model; that is, to provide more funds to any credit-worthy project outside the target group.

Capitalisation: Some views

RRBs are public entities with avowed objective of providing credit in rural areas to small and marginal agricultural farmers, artisans, etc. Considering their asset quality, risk

profile, credit concentration, it is necessary that they may not be allowed to garner public deposits unfettered. The fundamental principle that owners' stake in business should be in proportion to the size and risk of the business should be observed. Thus, RRBs should be advised to maintain a desirable level of capital adequacy. While prescribing a desired level, the following aspects may be kept in view.

Owners' are central and state governments and commercial banks.

Operation is confined to a particular region and credit is made available to a targeted group (social obligations).

Assets are risky.

At present 90 out of 196 RRBs are having accumulated losses.

In view of the above, it is felt that while RRBs are required to maintain capital adequacy, the ratio may not be as high as that of commercial banks. In this context it is observed that

if all the losses are to be wiped out and NPAs are to be provided for and a minimum paid up capital of Rs. 1 crore has to be maintained, then about Rs. 2629 crore has to be provided for.

If capital adequacy is to be maintained at the rate of 3 per cent, 5 per cent, and 8 per cent then Rs.2840 crore, Rs.3050 and Rs.3426 crore, respectively, are to be provided for.

The state-wise and sponsor bank-wise fund requirements are annexed. In the above computation, all the loans and advances were attached 100 per cent risk weight. Since majority of the investments of RRBs are in government securities, no risk weight has been attached to them.

To make capital infusion efficacious following considerations may be taken into account.

RRBs having CAR more than 5% and making profits in the last 3 years and having no accumulated loss may be considered as good banks and such RRBs be allowed to raise funds by way of bonds, debentures etc. or other instruments in the nature of tier II capital.

RRBs made loss in the last 3 consecutive years and having high NPA and accumulated loss (call it bad/ not viable) can be capitalized to wipe out loss and NPA but should be monitored closely. If turn around is not visible in 2/3 years' time then liquidation can be recommended. In case the concerned state government is not comfortable with the remedy, they may be requested to take care of the depositors' interest, indicating that deposit insurance may not be available.

For the rest of the RRBs, possibility of merger within a state can be explored. It is envisaged that by merger cost of operation in respect of housekeeping can be reduced and staff deployment from surplus to deficit branches could be more effective. Services of specialized staff (employed on contract basis in the areas of IT, legal etc.) can be used as a common pool. These efforts would improve the operational efficiency and profits of RRBs. Mergers can be between RRBs of same sponsor bank or different banks (may be with contiguous area of operation or not).

Summary

Given the milieu of rural India, it seems necessary that regional rural banks have to be repositioned and carry out their entrusted responsibility of meeting the credit requirement in the rural sector. However, there are various constraining factors such as low credit off-

take, small ticket business, low recovery rate and high employee cost. In order to reposition RRBs, following steps may be taken:

Loss making RRBs should take steps for enhancing productivity by improving the skill and performance of their employees by better and specialized trainings in the areas of banking & finance, IT, management etc. and taking up new areas operation. To keep wage bill and loss in control, fresh recruitments when retirements will commence in near future can be planned strictly on the basis of business.

Flexibility in business model like providing funds for creditworthy projects out side the target area and taking up commission based activities like financial consultancy, insurance, mutual funds etc. can be introduced.

An appropriate rating model (one suggested above, CAMELS currently followed) can be implemented to categorize the RRBs depending on their performance. Based on their ratings, course of restructuring like a) strengthening of capital base by raising funds from outside or b) merger and amalgamation or c) recapitalization and close monitoring could be planned.

Implementation of a desired (workable) level of capital adequacy ratio say at

5% is desirable.

To wipe out accumulated loss and to maintain 5 per cent capital adequacy ratio and to provide for the NPAs, owners would be required to infuse capital to the extent of Rs.3050 crore.

Repositioning of Regional Rural Banks in the Credit Delivery System in India: Issues and Options

Considering the role and importance of agriculture in Indian's overall economic development in terms of income and employment generation and poverty alleviation, great significance has been placed on developing appropriate institutions and mechanisms to cater to the credit requirements of the rural sector. Setting up of Regional Rural Banks (RRBs) in the mid- seventies was a major initiative in this direction. The RRBs are specialized rural financial institutions for developing the rural economy by catering to the credit requirements of small and marginal farmers, agricultural labourers, artisans and small entrepreneurs. Besides the RRBs, commercial and co-operative banks have been catering to the credit requirements of the rural sector. While the commercial banks with focus on profitability had certain limitations in accelerating agricultural credit, the cooperative sectors efforts were also hampered by several financial weaknesses; the conditions of cooperatives are particularly alarming in many states resulting in a vacuum of financial services, multiple layers and political interference. The recent focus of the Government of India on doubling the flow of credit to the agricultural sector has warranted a relook at the relative roles of co-operative banks, RRBs and commercial banks. Though over the years the RRBs have been able to expand their outreach and business and meet the credit requirements of the poor, several weaknesses emerged in their functioning, eroding their profitability and viability. Several Working Groups in the past have reviewed the working of RRBs and have made significant recommendations and many initiatives were also taken, particularly since mid-nineties, to improve the performance of RRBs, which however, have met with limited success. In the context of the great emphasis by the Government on agricultural and rural development, there is a need to examine if the RRBs are to be repositioned in the credit delivery mechanism. As the very objective of setting up RRBs was to extend adequate credit to the rural borrowers, particularly the economically weaker sections, as it had rural feel and character and was staffed by people mostly from the rural areas, RRBs could be used as an effective instrument for credit delivery in rural areas.

2. It is by now well recognized that a broad-based rural development strategy is the key to poverty reduction, employment and income generation, and increasing access of the rural poor to financial services. In this context, the need has emerged to evolve a

systemic response to address the issues and weakness of RFIs for reviving the rural economy through investments in agriculture and rural enterprises for promoting economic growth. One of the critical elements in this regard is to devise ways and means to improve the health and viability of RRBs so as to reposition them in the credit delivery mechanism in India. Against this background, the paper attempts to review the performance of RRBs, highlight their problems and weaknesses and suggest alternatives for restructuring and reviving them. While Section I discusses the trends in outreach and overall performance of RRBs. Section II analyses the factors responsible for the weak financial health of RRBs. Section III sets out the road map and contains few suggestions for improving the functioning of RRBs.

Section I : Overview of Performance of RRBs

3. The RRBs have a special place in the multi-agency approach adopted to provide agricultural and rural credit in India. These banks are state-sponsored, regionally based and rural-oriented. The RRBs were established in 1975 with the mandate to develop the rural economy by providing credit and other facilities for the development of agriculture, trade, commerce, industry and other productive activities in the rural areas, particularly to small and marginal farmers, agricultural labourers, artisans and small entrepreneurs.

4. RRBs have played a key role in rural institutional financing in terms of geographical coverage, clientele outreach, business volume as also contribution to development of the rural economy.

Expansion of Branch Network

5. A remarkable feature of RRBs performance over the past three decades has been the massive expansion of its retail network in rural areas. From a modest beginning of 6 RRBs with 17 branches covering 12 districts in December 1975, today, there are 196 RRBs with 14,446 branches working in 518 districts across the country (Statement). RRBs have a large branch network in the rural area forming around 43 per cent of the total rural branches of commercial banks. The rural orientation of RRBs is evident from the fact that their rural and semi-urban branches constituted over 97 per cent of their branch network.

6. The physical expansion of RRBs has been accompanied by a considerable increase in human resources. The large staff strength (70,294 in March 2000) has enabled

RRBs to serve a larger number of clientele. It has, however, declined continuously there after and stood at 69,249 in March 2004.

Deposits

7. In line with the objective of mobilising rural savings and channelising it for productive purposes, there has been a substantial increase in the volume of business of RRBs – their deposits and credit have increased manifold. Aggregate deposits of RRBs increased from Rs.0.20 crore in December 1975 to Rs.4,151 crore in March 1990 and further to Rs.56,350 crore by March 2004, owing mainly to their geographical spread and opening of new branches in unbanked areas.

8. Around 46 percent of RRBs deposits in March 2004 were generated though various types of savings products, while fixed deposits accounted for less than 50 per cent and current deposits about 5 per cent.

Advances Portfolio

9. Though the RRBs were originally conceived to develop the rural economy by providing credit to rural poor with small means, in keeping with the financial rector reforms process in the nineties, the RRBs were allowed to extend credit facilities to the rural non-target group to a limited extent. In 1997, the guidelines on priority sector lending were issued to the RRBs, which brought them almost on par with commercial banks with regard to their domestic credit portfolio.

10. RRBs account for a very small proportion (around 3 per cent) of the total assets of the banking sector, despite their significant branch network. Advances of RRBs witnessed an over 7-fold increase from Rs.3,554 crore in March 1990 to Rs.26,114 crore in March 2004. Despite this, RRBs advances constituted just 2 per cent of the banking system's credit portfolio. Between 2000 to 2004, loans disbursed by RRB's more than doubled (from Rs.6,960 crore to Rs.15,579 crore) reflecting the efforts taken by the banks to improve credit flow to the rural sector. The average per branch advances increased from Rs.25 lakh in March 1990 to Rs.154 lakh in March 2003.

11. There is wide State-wise differences in credit deployment by RRB's. State-wise performance of credit disbursements in 2004 indicated that Andhra Pradesh (19 per cent) ranked first, followed by Uttar Pradesh (16.1 per cent) and Karnataka (11.0 per cent).

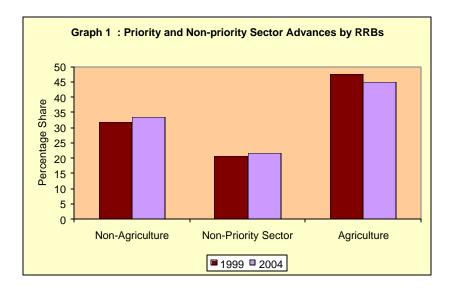

Credit disbursements in the North-Eastern States like Manipur, Mizoram, Nagaland, Jammu & Kashmir, Tripura and Uttranchal have been relatively low.

Credit- Deposit Ratio

12. During the first decade of their operations, the RRBs concentrated on expanding credit services as reflected in the credit-deposit ratio of more than 100 per cent up to 1987. Thereafter, the C-D ratio has been lower, reflecting a reorientation in their activities. During the recent years, however, there has been an improvement in the credit-deposit ratio, which went up from around 40 per cent in March 2000 to over 46 per cent in March 2004. Despite the impressive deposit growth, credit disbursals of RRBs have been lagging behind which is a matter of concern.

Priority Sector Lendings

13. RRBs have a priority sector lending target of 60 per cent. Total priority sector advances of RRBs more than doubled from Rs.10,111 crore in 2000 to Rs.20,470 crore in 2004. Agricultural loans (44.8 per cent) accounted for bulk of the priority sector advances in 2004, while the share of non-agricultural advances was 33.5 per cent (Graph.1).

14. Agricultural credit grew at an average of 33 per cent annually during the period 2000 to 2004, while non-agriculture credit rose sharply by 126 per cent annually, mainly on account of a sharper growth in credit to SHGs, SSIs and others. Short-term loans accounted for a larger proportion of agricultural loans (Table 1). Short-term agriculture credit increased at about 28 per cent per annum during the period, while term loans increased by around 5 per cent a year.

Table 1 : Growth in Advances of RRBs

Source : NABARD

15. The comparative position of share of agriculture in total advances of RRBs and public sector banks is given in Graph.2.

Graph 2 : Share of Agriculture in the Total Advances by PSBs and RRBs

Agricultural Credit

16. The proportion of loans extended by various institutions over the years to the agricultural sector, *inter alia*, reflected the impact of the evolving concept of "multi-agency approach". While the predominance of co-operatives as a source of credit has come down significantly, that of commercial banks and RRBs rose sharply (Table 2). Despite the strong rural branch net work, RRBs share in the total agriculture credit at the national level has remained abysmally low right from their inception.

| | | (Per cent) | | |
|---------|---------------|-------------|------------------|--|
| | Co-operatives | RRBs | Commercial Banks | |
| 1970s | 79.5 | 2.3 | 21.0 | |
| 1980s | 55.9 | 5.3 | 38.9 | |
| 1990s | 51.5 | 6.2 | 42.3 | |
| 2002-03 | 34.0 | 9.0 | 57.0 | |

Table 2: The Decadal Average Share of Institutions in Agricultural Credit

Investments

17. RRBs have shown a tendency to move away from their traditional task of providing loans and increased their investments, particularly since mid-nineties. This however, had a salutary effect on their bottom lines. Their investment – deposit ratio which touched 72 per cent in 2001 declined thereafter and stood at 64 per cent in 2004 (Statement).

Financial Performance

18. Recent improvements in the financial performance of RRBs have helped in shoring up their bottom lines. Over a period of three years (2001-03), aggregate reserves of RRBs increased significantly (85 per cent), while their deposits (31 per cent), borrowings (18 per cent) and investments (20 per cent) too picked up. During the above period, loans and advances outstanding increased by 40 per cent while loans issued increased by 43 per cent.

19. The net profit of 196 RRBs declined by 15 per cent to Rs.519 crore as on March 31,2003. As at end-March 2003, 103 RRBs showed improvement in their performance either by way of increase in profits or reduction in losses or by shifting from loss to profit as compared to 121 as at end-March 2002. The number of RRBs which had wiped off accumulated losses and attained sustainable viability¹ increased to 97 as at end-March 2003 (from 86 during the previous year) and these RRBs together built up reserves to the extent of Rs.2,335 crore as at end-March 2003. Another 59 RRBs attained current viability² and reduced their accumulated losses to Rs.1,203 crore as at end-March 2003 (Table 3).

¹ Sustainable viability refers to RRBs having profits and no accumulated losses.

² Current viability refers to RRBs with profit for the year but also having accumulated losses.

| Category | Number | Profit/ Loss | Accumulated Loss | NPAs |
|--------------------|--------|-----------------|---------------------|---------|
| 1 | 2 | 3 | 4 | 5 |
| Sustainably viable | 97 | 623.95 | - | 1518.91 |
| Currently viable | 59 | 110.01 | 1183.50 | 955.96 |
| Loss making | 40 | -214.67 | 1541.66 | 724.88 |
| Total | 196 | 519.29 | 2725.16 | 3199.75 |

Table 3 : Viability Status of RRBs (As on 31st March 2003)

(Rs Crore)

Source : NABARD

20. The accumulated losses of RRBs as a group however, increased marginally (2 per cent) as on March 31, 2003 over that in the previous year. The performance of RRBs, however, varied widely across the States. The problems faced by these banks include limited area of operation, preference for narrow banking, low level of recovery in certain regions, difficulty in effecting recoveries under government sponsored programmes, non-release of State Government's share (Rs.45.89 crore) towards recapitalisation, HRD related issues, etc.

Recovery Performance

21. The asset quality of RRBs has significantly improved over the past few years due to their improved recovery performance. The rate of recovery improved sharply from 64 per cent during 2000 to 73 per cent in 2004 (Statement).

22. During the year ending June 2003, over Rs.3500 crore had to be recovered by RRBs at the aggregate level. (Table 4).

| | | | | (Rs.crore) |
|------|----------|------------|---------|--------------|
| Year | Demand | Collection | Balance | Recovery (%) |
| 1 | 2 | 3 | 4 | 5 |
| 2001 | 9617.93 | 6789.53 | 2828.40 | 70.59 |
| 2002 | 11569.82 | 8274.34 | 3295.48 | 71.52 |
| 2003 | 13246.95 | 9738.80 | 3508.15 | 73.53 |
| 2004 | - | - | - | 73.00 |

Table 4 : Recovery Performance of RRBs (As on 30 June)

Source : NABARD

23. State-wise recovery performance of RRBs revealed that as on June 30, 2003, Punjab registered the maximum recovery rate (92.7 per cent), followed by Tamil Nadu

(89.3 per cent), Kerala (85 per cent) and Haryana (84.7 per cent). The number of RRBs having recovery above 80 per cent increased from 29 as at end-June 2001 to 49 as at end-June 2003. RRBs with recovery levels of below 40 per cent and 40 to 60 per cent have declined during the same period (Table 5).

| | | · | | (Rs.crore) |
|------|-------|---------|----------------|------------|
| Year | <40 % | 40-60 % | 60-80 % | > 80 % |
| 1 | 2 | 3 | 4 | 5 |
| 2001 | 14 | 41 | 112 | 29 |
| 2002 | 12 | 38 | 113 | 33 |
| 2003 | 6 | 35 | 106 | 49 |

Table 5 : Frequency Distribution of RRBs According to Range of Recovery (As on 30 June)

Source : NABARD

Non-Performing Assets

24. Constant follow-up by RBI, NABARD, sponsor Banks and other supervisory authorities created positive awareness among the RRBs about the quality of lending. This was reflected by the declining trend in the NPAs of these banks. RRBs showed steady improvement in this regard as witnessed by the gradual decline in their gross NPAs as a percentage to loans and advances outstanding from 18.8 as at end-March 2001 to 14.4 per cent as at end-March 2003 and further to 12.6 per cent in end-March 2004. The improvement in recovery of dues could, inter alia, be attributed to the various policy initiatives as also the micro-finance initiatives undertaken by RRBs. The cumulative number of SHGs financed by the RRBs as at end- March 31, 2004 was 4,05,998, accounting for 38 per cent of the total. The SHGs linkage has helped RRBs to increase their outreach and has become a platform for successful implementation of many other developmental programmes.

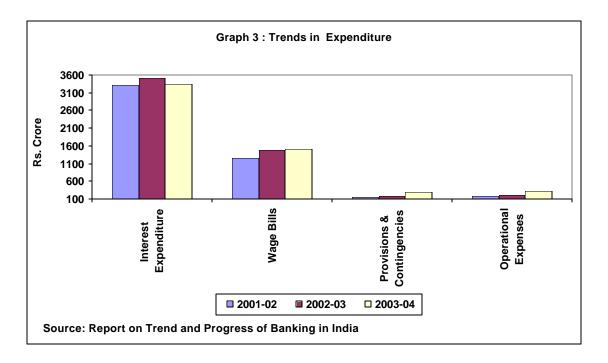

25. Despite the fact that as on March 31, 2003, 151 RRBs registered a decline in their NPA percentages, 88 RRBs (45 per cent) exceeded the all-India average of 14.4 per cent and 52 RRBs had NPA levels of more than 20 per cent of their outstanding loans and advances. However in absolute terms, the NPAs of RRBs increased from Rs.2,578 crore as at end-March 2001 to Rs.3,200 crore as at end-March 2003. Region-wise trends reveal wide variations in the position of total loans outstanding and NPAs. The NPA proportion was the highest in the North-Eastern region (26.4 per cent) and lowest in Northern region (7.9 per cent).

26. Some of the development initiatives which helped in improving the operational and financial efficiency of RRBs were (i) grant of exemption from the practice of mark to market norms in respect of Statutory Liquidity Ratio (SLR) approved securities up to March 31,2004 and (ii) policy of exemption from Service Area Approach for weak RRBs was reviewed and 54 RRBs were granted relaxation from the obligation up to March 31, 2004.

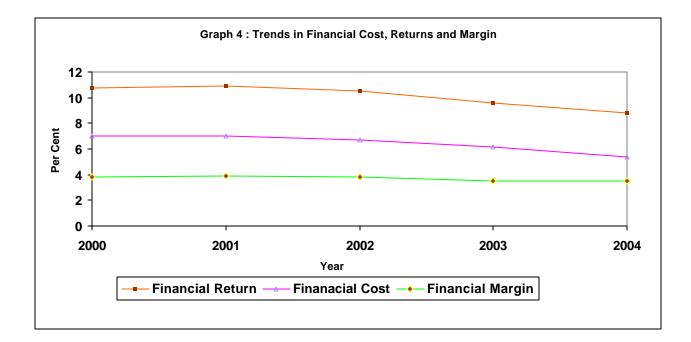

27. As a part of the restructuring exercise, a system of preparation of Development Action Plans (DAPs) on fixed time-frame is in place. Subsequent to the preparation of DAPs, RRBs have entered into MoUs with sponsor banks assuring performance according to the DAPs finalised by them.

Trends in Expenditure and Margins

28. RRBs have high a cost structure – in 2003-04, interest expended accounted for over 60 per cent of the total expenditure, followed by wage bill (28 per cent) (Graph 3).

29. Over the period 2000 to 2004, the financial returns of RRBs have declined faster than financial costs, resulting in a shrinkage of their margins (Graph 4).

30. RRBs cost of operations have been higher than that of commercial banks and DCCBs (Table 6).

Table 6 : Banks' Aggregate Margins

Percentage of

| Agency | Financial Margin | Cost of Operatio | Gross Margin n | Risk Costs | Net M |
|-------------------|---------------------|---------------------|-------------------|------------|----------|
| <u>argin</u> | | | | | |
| Com Bks [2002-03] | 2.91 | 2.24 | 2.33 | 1.35 | 0.98 |
| RRBs [2002-03] | 3.48 | 2.98 | 1.26 | 0.34 | 0.92 |
| DCCBs [2001-02] | 2.99 | 1.69 | 1.90 | 1.91 | (0.01) |

Total Assets

Source : Vyas Committee Report ,2004.

Support from NABARD

31. In addition to savings mobilisation and participation in government funded programs, RRBs access refinance assistance from NABARD for on lending. In 2003-04 refinance to RRBs (Rs.1,589 crore) accounted for 21 per cent of the total refinance disbursed by NABARD.

Section II : Issues and Concerns

32. There are several concerns relating to rural credit, viz., inadequate coverage, inadequacy of flow of credit, constraints on timely availability, high cost of credit, neglect of small and marginal farmers, low credit-deposit ratios in several States and continued presence of informal markets. Despite the various initiatives taken since the nineties to address these problems, there is an element of dissatisfaction that the progress has been tardy. "It is a matter of concern that cognizable success is eluding the policy-makers, at a time when increasing commercialization warrants a big thrust in institutional credit to agriculture. There is thus a discernible widespread intellectual recognition that while immediate measures are undertaken to increase the flow of credit to agriculture, there is a need to review the policy of rural credit in a comprehensive and thorough manner" (Reddy, 2004).

33. The basic thrust of the current strategy adopted by the RBI to enhance credit flow to the rural structure is through enhancing credit delivery in a regime of reasonable credit prices within the existing legal and institutional constraints. Some of the elements of the current strategy adopted by the RBI to increase the flow of credit are as follows :

- The coverage of rural credit is extended to include facilities such as storage as well as credit through NBFCs.
- ii) Procedural and transactional bottlenecks are sought to be removed, including elimination of Service Area Approach, reducing margins, redefining overdues to coincide with crop-cycles, new debt restructuring policies, one-time settlement and relief measures for farmers indebted to non-institutional lenders.
- iii) Kisan Credit Card Scheme is being improved and widened in its coverage while some banks are popularizing General Credit Cards (GCCs) which is in the nature of clean overdraft for multipurpose use, including consumption.
- Public and private sector banks are being encouraged to enhance credit delivery,
 while strengthening disincentives for shortfall in priority sector lending.
- v) The banks have been urged to price the credit to farmers based on actual assessment of individual risk rather than on a flat rate depending on category of borrower or end-use, while ensuring that interest-rates charged are justifiable as well as reasonable.

34. In this context, the RRBs have a key role to play. Commercial banks have focussed more on improving their efficiency and profitability and they have given relatively less importance to rural credit, though there has been some improvement in this situation during the current year. RRBs and cooperative banks on the other hand are facing serious problems of governance and operational efficiency. Though the RRBs have been able to fulfill their mandate in terms of outreach and savings mobilization from the rural areas, their performance with regard to providing access to credit has been far from satisfactory. The financial health of RRBs has also been a cause for concern since their inception due to various factors. The major shortcomings of the RRBs are as follows:

- xiii) *Limited Area of Operation*: The RRBs are constrained in their operations by the limited area of operation. This coupled with their narrow base of business activities and the low clientele base, has resulted in high risk exposure of RRBs
- xiv) **Narrow Clientele Base** : The customers of RRBs compromise of small and marginal farmers, small scale sector, small transport operators, SHG groups, etc, whose credit requirements are mostly small. RRBs are unable to cross-subsidise their lending business as they do not generally provide credit to wealthy borrowers with large needs, thereby affecting their capacity to earn higher incomes .
- xv) Under capitalized : RRBs as a group have a low capital base, and their authorised capital is Rs.1 crore placing limitations on their business size. Furthermore, in the case of some of the RRBs their deposit liabilities are very large compared to their capital base. For instance, as as on March 31, 2004 while 2 RRBs had deposit liabilities of over Rs 1,000 crore, 24 RRBs had a deposit base ranging between Rs.500 to Rs.1,000 crore, and 146 RRBs had deposit liabilities between Rs.100 to Rs.500 crore. This is not a healthy trend as in the event of inefficient use/misuse of funds resulting in a financial problem, the stakeholders would have to bale out the bank.
- xvi) Small Organisational Structure. The size of financial assets, as well as linkages which are necessary for effective banking services has been limited by the small organisational structure of RRBs. This has also come in the way of growth in business volumes and garnering a larger share in the rural financial market.
- xvii) Low Recovery and Large Non-Performing Assets : RRBs loan recovery rates have declined over the years, resulting in a large over hang of NPAs (around Rs.3,200 crore) as discussed earlier, which has come in their way of recycling funds and increasing the flow of credit to the rural sector. The directed lending

policy for RRBs has resulted in low quality of assets. This coupled with high cost of funds and below cost interest rates on loans has led to high accumulated losses and piling up of bad assets in the case of many RRBs.

- xviii) High Cost Structure: RRBs are characterized by high cost of servicing numerous small accounts and huge wage cost. Furthermore, RRBs get credit from sponsor banks and refinance from NABARD at rates of interest higher than the market rates. This places limitations on their ability to reduce the rates they charge to their ultimate borrowers, although they are compelled to do so on account of competition from banks.
- xix) **Perceived as Specialised Bank**: There has been an uneven growth of RRBs due to the diffusion in the perceived objectives of RRBs over time. Despite the pressures of credit expansion, improvement in recovery performance, profit orientation and strict compliances to banking norms, the general perception has been that RRBs have got only social objectives, without any viability consideration , which has to be changed.
- xx) Inadequate Financial Management Skills : Poor financial management skills, coupled with pressures from various quarters (like sponsor banks) appears to have resulted in inefficient allocation resources by RRBs which in turn is reflected in the high incidence of NPAs and parking of huge funds with sponsor banks (policy changed in 2002-03).
- xxi) Unskilled and Aging Staff Structure : Limited exposure and lack of appropriate training, has resulted in RRBs staff lacking the necessary skills and capacity to cater to the changing requirements of the rural sector. Furthermore, the ban on recruitment has also resulted in aging staff structure constraining constraining efficiency in operations. Uniform norms and personnel policies have been applied to RRBs through out the country ignoring local touch thereby causing staff unrest, poor industrial relations, innumerable litigations and lowering of staff morale as also their involvement with the development tasks (Rao Committee, 2002).
- xxii) Heavy Dependence on Sponsor Banks : Another weakness observed in the case of RRBs is their failure to adequately integrate with the financial markets of the country due to their heavy dependence on sponsor banks for financial/business initiatives. RRBs are also some times perceived as potential competitors, due to the presence of the sponsor banks in the same area of operation. RRBs have therefore, not been able to establish systems and procedures required for

providing efficient services to the clients ,as also for efficient management of their financial resources.

- xxiii) Lack of Professionalism in Management : The Chairman of most of the RRBs are from sponsor banks which limits the freedom and decision making capacity of RRBs. Even for small matters RRBs have to refer to sponsor banks, which leads to delay in decision making and reduces efficiency. Furthermore, the Board of Directors of RRBs are most often ineffective as they are either appointed by the stakeholders or are political appointees lacking necessary skills and qualities to take important portfolio decisions. They also lack the freedom in operational decision making hampering RRBs growth.
- xxiv) *Erosion of Deposits* : In the case of few RRBs there has also been an erosion of public deposits, besides capital.

Though many RRBs share the problems discussed above, there are few which are viable and vibrant institutions.

35. Besides the above, RRBs functioning has also been affected by other factors, *viz.*, legacy problems and other policy constraints. The administered interest rate regime which prevented these banks from lending at competitive rates, the change in the wage structure of RRBs by bringing them on par with the commercial banks resulting in higher wage costs, and various restrictions imposed on them by the regulators/supervisors while re-capitalising to monitor recovery further deteriorated their operational flexibility. It would , therefore, not be proper to judge the performance of RRBs *,vis-à-vis*, commercial banks , without considering the policy and administrative constraints impinging on their performance.

36. The various problems relating to RRBs have been well documented and several committees/working groups have made far-reaching recommendations to remedy the situation such as lending to non-target groups (Dantwalla Committee, 1978), recapitalisation and investment in high-yielding government securities (Kelkar Committee, 1986) and possible merger with rural subsidiaries of sponsor banks (Narasimham Committee, 1995).

37. Some of the suggestions have been implemented and other policy initiatives taken particularly since mid-nineties to revitalize RRBs. One such initiative was the contribution by stakeholders of RRBs of nearly Rs 2,200 crore as additional capital for

187 RRBs between 1994-95 and 1999-2000. There has been quantitative, as well as qualitative improvements in the performance of RRBs following the banking sector reforms process. The policy measures undertaken in respect of RRBs, viz., the permission to relocate loss making branches to better business centres and conversion of loss-making branches into satellite/mobile offices without impairing their performance in service areas has also had a salutary effect on their financial performance, especially profits, recovery and decline in their NPAs.

38. While there has been some improvement in the RRBs functioning in the recent years, there is significant room for improvement in their governance, transparency, human resources, and systems and procedures. There is generally no representation of experts and agricultural specialists on the board of directors to provide commercial expertise or orientation and an overbearing presence of officials from sponsor banks officials as directors. RRBs need to urgently focus on enhancing portfolio quality by reducing the non-performing loans and acquiring modern technology for credit appraisal and delinquency management. Without reducing subsidy dependence, RRBs will neither become autonomous nor sustainable. RRBs have to realize that the lower end of the rural finance market provides sufficient avenues for profitable operations and should refrain from diversifying into market segments and products for which they are ill equipped.

Section III : Repositioning of RRBs – Agenda for Future

The Rationale

39. RRBs which were set up with the intention of extending credit to the rural poor have succeeded in the objective of taking banking services to the villages, but have however, failed to make a clear dent on credit to the rural poor during the past 30 years of their existence. This has to be viewed in the context of the policy framework for rural development adopted in India with focus on income and employment generation and poverty alleviation. The renewed emphasis on agricultural and rural development by the Government of India would lead to a growing demand for different types of financial services in the rural areas, as financial needs of the rural economy becomes diversified. The present structure of rural credit may not be able to cater to the same. RRBs would be called upon to play a greater role in providing such services due to their rural character and feel. RRBs have to take over a larger share of credit disbursements calling for much larger resource mobilization, as also greater efforts for their institutional strengthening.

40. After nearly three decades of existence, the RRBs are facing many constraints warranting an over haul and a serious consideration on the part of the policy makers for their strengthening. This can be achieved not only through recapitalisation, but by simultaneously establishing a revamped legal, regulatory and supervisory framework with emphasis on high quality of governance and a management that recognises the real challenges confronting the RRBs. Only then can RRBs be expected to meet the expectations of becoming vibrant rural financial institutions capable of meeting the growing requirements of rural India

41. In this context the questions which arise are whether agricultural banks can be successfully reformed, what are the preconditions for the same and what measures need to be taken ? The international experience of successful reforming of agricultural development banks, viz., Bank for Agriculture and Agricultural Cooperatives (BAAC) in Thailand and the Bank Rakyat Indonesia (BRI), suggests that reforming agricultural development bank may be feasible and that financial performance and outreach can be greatly improved (Annex I and II). Certain preconditions for reform however, exist such as favourable financial sector environment, effective demand for rural financial services and a commitment to profitability and sustainability of operations.

The Agenda

42. In the Indian context, there is a need for repositioning and revitalizing RRBs to bridge the credit gaps in the rural areas to attain the overall macro-economic goals and help in poverty alleviation. The suggested road-map for reviving RRBs is as follows :
(1) Immediate measures to be taken within the existing legal framework.

(a) Governance issues :

i) As the Chairman of RRBs is mostly from the sponsor bank, it constrains their freedom and flexibility to take timely decisions thereby hampering the efficiency of RRBs. Hence the criteria for appointment of Chairman/Managing Director of RRBs has to be revisited, and the Chairman may be appointed from the open market through a transparent process. There are various options in this regard. One such option is to have a pool of experienced and knowledgeable persons from which a Chairman could be appointed. Another alternative could be to have a separate post of Chairman and CEO which would reduce to some extent, the interference of the sponsor bank in day to day operations of the RRBs.

- ii) The lack of freedom to take any commercial decisions has resulted in apathy of the Boards towards the RRBs (Khusro Committee, 1989). The Committee had noted that RRBs Board did a poor job of monitoring their performance because they did not have any interest in the affairs of the bank. In several cases, the Board consists of political appointees not familiar with technical and operational aspects of banking and finance, which in turn, has come in the way of RRBs adopting appropriate lending and financial policies, etc. For strengthening the Boards of RRBs, the composition of the Board may have to be changed. The Board has to be broad-based through inducting professionals such as agricultural and banking experts, CAs and MBAs, etc. Certain clear-cut policies and criteria may have to be stipulated for appointment of Directors to the Board of RRBs. Only committed persons/officials may be nominated by the State Government and Central Government on RRBs Board. Wherever needed, the RBI may consider writing to the State/Central Governments to nominate specialized person in agriculture/co-operation/ banking, etc. instead of IAS officials who do not regularly attend the Board meetings. The Central Government may be requested to appoint even retired persons with professional competence in the relevant fields on the Board.
- iii) One of the problems in the case of RRBs is the unskilled and aging staff structure which has adversely affected the performance of RRBs. This is the fallout of both policies (ban on recruitment) and other factors. For improving the viability of RRBs, the staff could actively participate in the restructuring process. There is, therefore, a need to change the human resources policies in RRBs and greater flexibility and freedom may be given to them to recruit competent and skilled staff from the open market, subject to some broad guidelines.
- iv) One of the problems in the case of RRBs is multiple ownerships which has resulted in a range of bureaucratic controls. It has at times resulted in faulty business policies and a plethora of reporting rules and regulations resulting in inefficient management practices(Thorat, 2004). For instance, the Government decides on various aspects of lending policy,

organisational structure and recruitment policies of the RRBs leaving very little freedom to them. There may be a case for addressing this issue.

(b) Structural / Management issues:

- To improve the operational viability of RRBs and increase economies of scale (by reducing transaction cost, etc.) there is a need for merger/consolidation of RRBs.
- ii) There may be a gradual segregation between ownership and management/ supervision, with emphasis on arms- length relationship.
- iii) There appears to be no specific incentives for managers and staff of RRBs to put in greater efforts to convert their branches into profit- centres. International experience in restructuring rural financial institutions have indicated that besides other conditions, the provision of incentives to staff is a key variable that facilitates success (Yaron, Benjamin and Charitonenko, 1998) The mindset of the officials in RRBs, needs to be changed through appropriate incentive structure and career planning.

(c) Operational issues :

- i) The demand for financial services is diverse and as such sustainable response would have to be pluralistic. (Seibel, 2001). Some borrowers require access to more capital, while others local savings systems. In such a set up, the RRBs may require flexibility in introducing different types of deposit and credit products to cater to the increasing diversification of agricultural products, markets and processes. This could go a long way in reducing costs and improving incomes.
- ii) The RRBs may have to focus more on non-fund based business like insurance, offering consultancy services to farmers, issuing drafts, etc.
- iii) Since mid-nineties RRBs appear to have moved away from their traditional function of providing credit and increased their investment portfolio. Though this has improved their bottom-lines, to reposition RRBs, proper incentive structure may have to be put in place to encourage them to increase their credit portfolio. This could be by way of recognition/ award/prizes to the best RRB based on some parameters like increase in credit flow, reduction in NPAs, higher credit-deposit ratio, etc.

- iv) Stepping up of efforts to clean the balance-sheet of RRBs through appropriate measures may be required which would enable them to recycle the funds locked-up in NPAs.
- v) Special recovery agency/incentives to staff for helping improve recovery performance, etc., may be considered.
- vi) There is a need for asset-liability management system for RRBs to help improve their viability.

(d) Other issues :

- International experience indicates that sustainable poverty reduction requires the political will of government, as also conducive policy framework. Furthermore, no poverty reduction programme can be sustainable without good governance and adequate policies. These are equally important for reforming RRBs in India.
- No unique business model for RRBs may be applicable due to various factors such as differences in socio-economic environment, geographical factors, availability of infrastructure, etc. As such, only broad guidelines and principles may be laid down with flexibility to RRBs to design their own products and techniques.
- (2) Medium-term measures to be taken in (next 2 to 5 years) :
 - The RRBs Act may have to be amended, particularly the provisions relating to ownership.
 - ii) There is a need for increasing the capital base of RRBs to enable them to provide more credit to the rural sector.
 - iii) RRBs dependence on concessional refinance and government sponsored schemes to be reduced and they have to be encouraged to mobilize more resources from the rural population and become viable institutions.
 - iv) As in some cases, State Government is playing a limited role, the scope for their gradual exit from RRBs need to be explored. The share of State Government may be taken up either by the sponsor bank or other banks.

Conclusion :

43. International experience of restructuring rural financial institutions indicate that only viable financial institutions with sustainable financial services can increase their outreach.

The issue of viability is thus not only of relevance to the health and survival of the institutions but also to the poor themselves. To reposition RRBs in the Indian Financial System, major initiatives may have to be taken to improve their financial viability and sustainability.

Experience of few countries in Reforming Rural Financial Institutions

1. Experience and Key Components of Reform*

Agricultural development banks were established 20-30 years ago to extend financial services, mainly credit at subsidized interest rates, to customers not considered creditworthy by commercial banks. They are largely state owned and funded by governments and international donor agencies. In general, agricultural development banks have focused on providing credit rather than on accepting deposits, a practice that has undermined their self-reliance as well as their viability. Agricultural development banks were established to extend credit and other financial services to customers not considered creditworthy by commercial banks. Although frequently unprofitable, they have played an important role in the fight against rural poverty.

Given the high cost of administering large numbers of small loans, the banks have tended to provide bigger loans to better-off farmers. Because farming is a seasonal occupation, agricultural lending institutions experience the boom and bust of cash flows, with loan requirements drastically increasing during the sowing season. In addition, an emphasis on providing loans strictly for agricultural activities, mainly crop production, as opposed to providing credit for other kinds of rural income-generating activities has limited the potential of agricultural development banks to serve a wider clientele. Such preferential credit programs have tended to curtail rather than expand their outreach to small farmers and other customers in rural areas.

Because they are government owned, agricultural development banks have frequently been subject to repressive financial measures, such as controlled exchange and interest rates, as well as to political expediencies and vested interests. Interest rate regulation has prevented them from covering their costs and has restricted the access of the poor to financial services. These banks have also remained largely unsupervised, and their de facto exemption from prudential banking regulations and from effective monitoring and supervision of their activities has brought many of them close to insolvency.

^{*} Extracts from "Agricultural Development Banks : Close Them or reform Them" by Hans Dieter Seibel, Finance & Development, IMF, June 2000.

Interestingly, these constraints have applied to institutions operating in both centrally planned and free-market economies.

With a few laudable exceptions, primarily in Asia, agricultural development banks have also suffered from the reluctance of both public and private sector interests to implement policies and reforms that recognize that the poor are bankable—that they can save, invest, and repay loans. To develop their agricultural activities and microenterprises, prepare for emergencies, and provide for the future, the poor need access to a range of microfinance services, in particular savings-deposit facilities, credit, and insurance. Agricultural development banks have often become unsustainable. In at least two regions—Africa and Latin America—a number of them have been closed down. Among those remaining, many are technically bankrupt but continue to limp along, unable to attract substantial new funding. They also lack the managerial wherewithal to diversify and enhance customer services—for example, by enabling women farmers and other traditionally disadvantaged groups to both save and borrow.

Successful Reform Stories

Reform—which requires operational autonomy and freedom from political interference—entails setting up an appropriate legal and regulatory framework with prudential norms and effective internal control and external supervision. Two agricultural development banks that reformed successfully are the Bank for Agriculture and Agricultural Cooperatives (BAAC) in Thailand and Bank Rakyat Indonesia (BRI).

Preconditions for Reform

The experiences of BAAC and BRI suggest that reforming the agricultural development banks may be feasible and that their financial performance and outreach can be greatly improved, but only if certain preconditions exist to facilitate their rehabilitation. Among these, a favorable financial sector climate, an effective demand for rural financial services, and a real commitment to profitability and sustainability of operations are essential. Any financial institution following sound practices can become sustainable and combine outreach and viability. But generally, institutions built on principles of self-reliance and private ownership have better prospects. To maximize their outreach, institutions must be financially sustainable: they must be able to cover all their costs, mobilize their own resources, protect their funds against erosion from inflation and nonrepayment of loans, and make a profit to finance their expansion. Clearly, the political will either to close loss-making institutions or to implement effective reforms is essential. Governments also need

to be pressured to implement reforms with implications for their own fiscal and prudential regulatory and supervisory policies.

Key Components of the Reform

- The political will to reform or close banks
- Adequate reform strategies (for example, privatization)
- An effective planning process
- Operational autonomy and freedom from political interference
- An appropriate legal and regulatory framework with prudential norms
- Financial restructuring
- Organizational restructuring
- Human resource development, including staff retraining
- Effective delivery system (decentralized network of branches as profit centers)
- Demand-driven deposit, credit, and other financial products
- Financial sustainability.
- Effective internal control and external supervision.

2. THAILAND

Bank of Agriculture and Agricultural Co-operation (BAAC) is recognized as one of the few successful examples of the specialized agricultural development banks in Asia and the developing world as a whole. In BAAC, the reform process as such has been a gradual one and has progressed in stages over more than 30 years, different from the "big-bang" type of reform experienced in other agricultural banks, for example BRI in 1983. At times, the reform process in BAAC moved slowly, and gained momentum in other periods.

In October 1998, **the Bank for Agriculture and Agricultural Cooperatives**, with 4.8 million clients representing some 86 percent of all farm households in the country, came under the supervision of the Bank of Thailand for the first time in its 34-year history. It is now subject to prudential regulation, such as capital-adequacy requirements and loan-loss provisioning. BAAC's reforms were actually staggered over more than thirty years. In the beginning, the bank depended almost exclusively on capital from the government for operating funds. Allocations often arrived late, and the inflow of funds was difficult to

synchronize with farmers' seasonal credit needs. The result was a chronic funding shortage. Loan- recovery rates dropped to as low as 51 percent in the early 1970s and, by 1974, administrative costs had risen to more than 8 percent, threatening BAAC's financial viability.

In 1975, the Bank of Thailand adopted an agricultural credit policy stipulating that commercial banks would initially have to lend 5 percent—and 20 percent subsequently—of their portfolios to the agricultural sector. Under this policy, the banks could either lend the amount directly to farmers or deposit with BAAC any portion of the quota that they could not disburse directly. This policy marked a turning point in BAAC's operations, and the increasing availability of commercial bank deposits made up for the BAAC's shortage of funds. Other measures were also taken, including shifting from wholesale lending through agricultural cooperatives, to retail lending to individual farmers organized into joint-liability groups. By 1987, BAAC had formed about 100,000 joint-liability groups involving 1.5 million members, compared with 821 agricultural cooperatives.

Between 1988 and 1996, the Bank of Thailand eliminated interest rate ceilings on the fixed deposits of commercial banks and eventually liberalized all interest rates. Restrictions were removed on the opening of branches, and commercial banks were allowed to offer a wide range of financial products in rural areas. By 1998, BAAC had increased the number of its branches to 535 from 82. While commercial banks were expanding their lending portfolios and reducing their deposits, BAAC was increasing its outreach and savings mobilization to the point where rural deposits became its main source of funds. Moreover, following Thailand's financial and economic crisis in 1997, BAAC was seen as a safer haven than its commercial competitors and received significant inflows of deposits.

The implementation of reform steps has resulted from both external and internal factors. In many cases, reform decisions and measures were taken in response to external influences such as government policy decisions and external shocks like the financial crisis most recently. However, a number of important reform steps originated from inside, some in adaptation or anticipation of a changing environment, others in response to lessons learned, including both failures and best practices. The shift from wholesale to retail lending in the late 1970s and the aggressive expansion of the branch network since the late 1980s are examples in point.

The development of BAAC and the internal reform process have been guided by a clear vision of achieving the dual objectives of (a) maximum outreach to the target clientele of farm households and (b) maintaining the financial viability of the bank. Political pressure and the strong role of the government has been the major force behind the outreach objective while the financial viability has been of vital interest to BAAC's management. Striking a balance between the two potentially conflicting objectives, has not been an easy task and involved compromises and compensations on either side.

In terms of focus and content, the reform process has been directed at the transition from agricultural credit to rural finance and at the institutional transformation of BAAC from a specialized credit institution to a diversified rural bank. The gradual diversification of financial services provides a clear indication of this evolution. In the early years, BAAC mainly provided short-term agricultural loans. During the 1980s the bank expanded into medium and long-term farm lending. Since 1993, BAAC has offered loans for farm-related activities and most recently opened the window for non-farm lending to rural micro and small enterprises. Since the mid-1980s, BAAC has added savings deposit facilities to the range of financial services offered to its rural clients.

Major reform elements

The reform of BAAC was characterized by a number of specific elements which can be summarized as follows :

First, the operational autonomy of the bank has been safeguarded and respected by the government. Directives and interventions by the government mainly applied to the policy level. Second BAAC has developed a corporate culture that recognizes costeffectiveness, productivity and efficiency as major guiding principles, despite government ownership and BAAC's status as a state-owned enterprise. This was largely achieved by the "privatization" of the organization and the internal procedures, such as the delegation of authority and responsibility to managers at different levels, the organization of the branches as profit centres and the recruitment of staff carefully tuned to workload, to name a few examples.

Third, the expansion of the branch network and the decentralization of operations which greatly increased the physical proximity and convenience and reduced the transaction costs for its clients. This was particularly important for savings mobilization as the number and volume of deposits grew proportionately with the number of outlets. Fourth, BAAC developed and perfected a particular financial technology and delivery mechanism, i.e. individual lending to members of joint liability groups, which specifically suits the rural Thai context. At the same time, BAAC reduced its engagement in the field which was less successful, i.e. wholesale lending to agricultural cooperatives.

Sixth, BAAC actively engaged in rural savings mobilization which led to a radical change in the financial resource base. Savings mobilization became a realistic option after two pre-requisites were fulfilled: first, the loan portfolio quality significantly improved in the early 1990s which sent an important signal to depositors concerning the safety of their deposits, and second, the expansion of the branch network reduced the depositors transaction costs which allowed low-income clients to deposit small amounts in a savings account with BAAC.

Seventhly, in view of the political constraints in its lending policy, BAAC's management has successfully pursued a strategy of negotiating privileges and compensations against government interventions and restrictions. While such compromises represent second-best solutions from a strictly economic viewpoint, BAAC was able to protect its financial viability in a politically constrained environment.

3. Indonesian Experience

a) Bank Rakyat Indonesia (BRI's) experience shows what can be achieved under deregulation. Since 1984, BRI has been a major provider of microfinance, mobilizing microsavings and offering small and micro loans to individuals and groups at the village level. By 1989, BRI was able to fully finance its village lending activities from locally mobilized savings. Since then, the growth of savings has outpaced that of loans, testifying to a strong demand by the rural poor for deposit services. By 1999, its 3,700 rural subbranches had 2.5 million active borrowers and some 20 million savings accounts. Among the three leading rural financial institutions in Indonesia, BRI accounts for 78 percent of savings account deposits and 52.2 percent of all loan accounts.

By implementing sound policies, including a massive staff retraining program, this formerly frail government-owned agricultural development bank made its microfinancing unit a tremendous success. Part of this success stems from the bank's recognition of the need to reach out to the rural poor as well as to wealthier clients. BRI benefited from interest rate deregulation and a management initiative to commercialize operations by transforming its subbranches into self-sustaining profit centers. For example, it offered its

staff profit-sharing incentives. The bank covers its costs from the interest rate margin and finances expansion from its profits; its long-term loss ratio is only 2.1 percent.

b) Bank Shinta Daya :The Indonesian Experience shows that the establishment of microfinance institutions (MFIs) and the outreach of existing financial institutions to the poor has been greatly influenced by the deregulation of interest rates in 1983 which led to a surge in national resource mobilization and a multitude of financial innovations, and bank deregulation in 1988, which led to a rapid increase in the number of village banks and the transformation of small institutions into rural formal sector banks. Both have greatly eased access of the poor to banking services and contributed to the reduction of poverty in Indonesia.

With 43,000 accounts and a clientele of over 30,000 comprising 30,340 savers and 12,656 borrowers, Bank Shinta Daya has shown that privately owned village banks can have a considerable outreach at the local level without being subsidised. Moreover, as it records 69 percent of its borrowers and 85 percent of its savers as poor, it has also demonstrated that financial services to the poor by private banks can be profitable and self-sustained. The main emphasis of any further attempt at poverty alleviation must concentrate on institution building : the establishment and upgrading of institutions owned by the poor, and of institutions providing services for a clientele that includes the poor.

For the further development of microfinance institutions and microfinancial services for the poorer segments of the populations, four policy measures are of particular importance according to the Indonesian experience:

- Deregulation of interest rates of permit institutions to pay interest rates with positive real returns to savers and to charge interest rates on loans that cover their costs and permit profits from which their expansion is financed and owners are rewarded. They also allow a given institution to differentiate their interest rates according to loan product, depending on loan size, maturity and collection service. Bank Shinta Daya has used the opportunities offered by deregulation in varying ways, offering an average deposit rate of 14.7 percent and charging an average lending rate of 27.4 percent.
- Bank deregulation to ease the establishment of new banks, branching out, taking the bank to the people, and to allow for the establishment of local MFIs with equity capital requirements that substantially differ from those for national banks.

- Provision of adequate forms of governance and legal status for MFIs that may be owned by members, communities and stockholders, as in the case of Bank Shinta Daya. There is still a need for adequate forms of non-bank status for small and very small MFIs such as financial self-help groups (i.e. genuine micro-institutions).
- Establishment of second-tier regulatory authorities which guide and supervise large numbers of small financial institutions that cannot be effectively controlled by the central bank. This is still largely a task of the future.
- informal financial institutions to upgrade their financial operations and acquire an appropriate legal status, thus evolving into semi-financial institutions with deepened services and increased outreach.
- semiformal financial institutions to upgrade their financial operations and evolve, where feasible, into village banks (BPR).
- informal semiformal and formal MFIs to link up with banks as refinancing institutions, thus strengthening their financial service capacity and deepened outreach.
- the poor to organise themselves in self-help groups and to upgrade their activities and gain access to the financial services of banks.
- MFIs to open a window for targeting the poor through the group approach, linking the MFI to existing self-help groups
- poverty alleviation projects in increasing women's participation and in transforming their local financial 1 operations into autonomous local MFIs owned and run by women.
- rural and commercial banks in establishing business relations with MFIs to refinance their activities, thus strengthening their financial deepening and outreach.

Recapitalisation, Change of Sponsor bank, Amalgamation and Liquidation of RRBs Legal position and possibilities

1. Capital Structure

1.1.Authorised Capital

The authorized capital of a Regional Rural Bank under Section 5 of the Regional Rural Banks Act (the Act) is Rs. 5 crores. The Central Government may, in consultation with the National Bank and the Sponsor bank increase or reduce the authorized capital (not below Rs. 25 laks).

1.2. Issued Capital

Under Section 6 of the Act, the issued capital of each Regional Rural Bank is required to be fixed by the Central Government in the first instance such that it shall not be less than Rs.25 lakhs and not more than Rs. one crore. The issued capital has to be subscribed by the Central Government, the State Government and the Sponsor bank in the proportion of 50%, 15%, 35% respectively.

Section 6 (3) of the Act authorises the Board of a Regional Rural Bank to increase the issued capital in consultation with the National Bank, the State Government and the Sponsor bank and with the prior approval of the Central Government. This is subject to the further condition that such capital has to be subscribed in the same proportion as the initial capital by the Central Government, the State Government and the Sponsor bank. 1.3. Increase in capital – issues and possibilities

- It is open to the Central Government to raise the authorized capital of any Regional Rural Bank as and when considered necessary after consulting the National Bank and the Sponsor bank concerned as the Act authorizes Central Government to raise the upper limit (of Rs. 5 crores) of authorised capital without any specified limit, in consultation with the National Bank and the Sponsor bank.
- The issued capital can be raised from the present limit of Rs. 1 crore fixed by the Government initially to the current upper limit of authorized capital being Rs. 5 crores by the Board of a Regional Rural Bank. The Board of the Regional Rural Bank has to obtain for this purpose, the approval of the Central Government and has also to consult the National Bank, the State Government and the Sponsor bank. However, the increase in capital is subject to the further condition that the *increased capital has to be subscribed in the same proportion* as the existing capital. This implies that if any of the shareholders, like the State Government or Sponsor bank is not inclined to subscribe to further capital, increase in subscribed capital will not be possible.
- If any one of the three entities holding shares has to *subscribe to capital in excess* of the specified proportion, amendment to the Act would become necessary. This is for the reason that the Act does not have any provision enabling the shareholders to transfer their shares or relinquish their rights over increased capital to or in favour of any of the other share holders or any other person.
- It will be open to the Regional Rural Banks to raise debt capital by way of bonds or debentures as they are authorized to undertake any business specified under Section 6(1) of the B.R. Act in addition to banking like the other banks.

2. Change of Sponsor banks

A Regional Rural Bank may be established by the Central Government under Section 3 of the Act by Notification in the Official Gazette only if requested so to do by a Sponsor bank. A Sponsor bank is defined to mean *a bank* by which such Regional Rural Bank has been sponsored. 'Bank' is not defined in the Regional Rural Banks Act. As such, a Sponsor bank can be any bank coming within the purview of the Banking Regulation Act. It could be a private sector bank or a public sector bank or a co-operative bank. There is no provision in the Act for transfer of sponsorship from one Sponsor bank to another. Change of Sponsor bank by transfer of shares is also not envisaged as there is no provision in the Act for transfer of shares. However, change of sponsor bank can be achieved as a result of amalgamation (See Para 3).

3. Amalgamation

3.1 **Power to order amalgamation**

Specific provisions have been made under Section 23 A of the Act for the Central government to effect amalgamation of Regional Rural Banks. Accordingly, the Central Government, may, after consultation with the National Bank, the State Government concerned and the Sponsor bank amalgamate two or more Regional Rural Banks into a single Regional Rural Bank in public interest or in the interest of development of the area served by the Regional Rural Banks or in the interest of Regional Rural Banks themselves by notification in the Official Gazette. The constitution, property, powers, rights and liabilities of the transferee RRB shall all be as specified in the Notification. The provisions of Section 23A relating to amalgamation leave the details of amalgamation to the Central Government (in all matters except for certain staff matters) which may be specified in the Notification. Thus, the Act empowers the Central Government to amalgamate any two or more Regional Rural Banks into a single RRB after consultation with the State Government, the National Bank and the Sponsor bank.

3.2 RRBs with Common Sponsor bank

Amalgamation of two Regional Rural Banks sponsored by the same bank will not affect the interests of the Sponsor bank or State Government and involve only the integration of the business of two banks. The area of operation will have to be redefined to cover that of both the erstwhile banks. Accordingly, this would be the easiest option available for merger of two or more RRBs.

3.3 RRBs with different Sponsor Banks

Where Regional Rural Banks sponsored by two different banks are sought to be merged within the same State, the shareholding of one of the Sponsor banks will have to be vested in the other under the Notification and the directors appointed by that Sponsor bank will have to be withdrawn (as there is no provision for two Sponsor banks). The issue of any compensation to the outgoing Sponsor bank will have to be settled in consultation with the Sponsor bank and specified in the Notification. As the Central Government has only a duty to consult and concurrence of the Sponsor banks is not a statutory requirement, it will be open to the Central Government to decide the matter of compensation and provide for in the Notification, although it would be advisable to act on consensus to avoid any dispute or litigation.

3.4 Regional Rural Banks in different States

Regional Rural Banks, under Section 3 of the Act, are required to be established 'in a State or Union Territory' and operate within the local limits specified in the Notification. Consequently, the area of operation of a Regional Rural Bank has to be confined to a State and interstate Regional Rural Banks are not envisaged. The State Government apart from holding 15% of the share capital has also the power to appoint two directors on the Board of a Regional Rural Bank. Further, in inter- state merger, the transfer of shares held by one State Government to the other will be involved, as the Act does not envisage more than one State Government to be the shareholder of a Regional Rural Bank. Hence, in the absence of specific provisions in the Act, the merger of Regional Rural Banks located in two different States may not be envisaged under Section 23A. However, if a view is taken that Section 3 of the Act deals only with the initial establishment of a Regional Rural Bank to be located in one State or Union Territory and that while exercising powers under Section 23A, the provisions of section 3 are not applicable, it would be possible to merge two banks with contiguous areas of operation situated in different states. As the transfer of shares of one of the State Governments to the other becomes necessary, the shares may be transferred to/vested in the State where the Regional Rural Bank has its headquarters. Further, the directors appointed by the outgoing State Government will also have to be excluded from the merged entity. In that case, the two State Governments have to agree to the deal as in the absence of concurrence any Notification merging the banks might lead to dispute/litigation. In this circumstances, it would be advisable that the mergers may be limited to RRBs located within the same state.

4. Liquidation

The provisions relating to winding up of companies does not apply to Regional Rural Banks. Under Section 26, any Regional Rural Bank can be liquidated by the Central Government by an order directing liquidation and specifying the manner of such liquidation. The power of the Central Government relating to liquidation are very wide as the details are left to be decided by the Government.

5. Conclusion :

Options Available

In short, for recapitalisation and restructuring of the RRBs within the existing legal framework, the options available are to -

• increase the issued capital if the existing shareholders, the Centre, the State and the sponsor bank are willing to subscribe thereto

or

raise debt capital by way of bonds / debentures;

- amalgamate weak / uneconomic RRBs under the same sponsor bank or under different sponsor banks with other RRBs within the same State
- liquidate unviable RRBs when other options are not feasible.

Annexure VI

Road map for Regional Rural Banks

Introduction

Regional Rural Banks (RRBs) were conceived as vehicles which would blend the professionalism of commercial banks' with the local touch to take care of the various financial needs of the target group in the rural sector. However, RRBs as a credit delivery channel to the targeted rural poor seems to be less successful. At present, 40 of the 196 RRBs are in losses and the gross NPAs are at 12.63 per cent, aggregating around Rs. 3,300 crores at the end of 31.3.2004; portraying a none too healthy position.

The other prerequisites for repositioning / reviving RRBs are improving their efficiency by suitably calibrating the business model – governance, operational and supervisory practices, supported by well trained / motivated staff with the right attitude.

2. Targetted approach

State-wise analysis indicates that the maximum number of loss incurring RRBs are situated predominantly in the States of Bihar (9 out of 16), Jharkhand (3 out of 6) and Orissa (4 out of 9). Likewise, sponsor bank-wise analysis reveals that the maximum number of loss incurring RRBs are accounted for by SBI and Central Bank of India.

If the aforementioned loss-incurring RRBs are tackled, the overall picture of RRBs in the country would dramatically improve.

3. Framework for Re-organising and revitalising RRBs

The objective of the exercise is to ensure that no weak RRBs would exist at the end of a reasonable period say 4 years.

The roadmap for repositioning RRBs can be drawn in two phases. In the first phase, a time limit of say upto 1 - 2 years may be given for the market forces to restructure the RRBs. Thereafter, in the second phase, RBI may directly intervene to correct the situation. HR issues may well turn out to be the biggest stumbling block in the path of consolidation.

3.1. First Phase

In the first phase, the RRBs mentioned at para 2 above need to be tackled invariably to improve the overall scenario. The respective sponsor banks and the State Governments may be asked to actively consider merger of the RRBs, preferably in contiguous districts, to reap the benefits of economies of scale / scope. The mergers may be between RRBs of the same sponsor bank or different banks and left purely to the participants to be considered on the merits of each case. The mergers between RRBs of two different banks would involve change of the sponsor bank and when contiguous districts are involved, it may also involve merger of RRBs in two states as per extant legal provisions. RBI and NABARD would play a pro-active role during this period.

During the first phase involving consolidation of the sector through merger of RRBs and for at least a couple of years after merger, the new RRBs (merged entities) would pass through a turbulent period. This would arise basically due to the cultural and HR issues emanating out of merger of different entities. Suitable administrative and operational planning, before each case of merger would be vital, to avoid / minimize issues / tensions arising out of either initial resistance or agitations subsequent to the merger, which may torpedo such consolidation efforts. Para 5.1 below details some of these aspects.

3.2 Second Phase

In the second phase, in respect of all weak RRBs, RBI may enter into an agreement with the respective sponsor banks and rope in the concerned State Government, if feasible. The agreements should involve **annual action plans** on the lines of those which were entered into in the case of weak public sector banks in the early 1990s, containing certain specific parameters in respect of which improvement has to be brought about.

In case the RRBs do not turnaround within a specified pre-set time limit, the same may be liquidated, subject to extant legal provisions. The fact that such RRBs would be liquidated needs to be made explicit, ex ante i.e., before each merger, so that all the stakeholders, especially the staff are aware. It is also felt that such a message would goad the staff in particular, in going all-out to put their best efforts to turn around the concerned RRBs. In case any of the State Government wants to opt out of any RRB, it may be

allowed to do and its share may be picked up either by another State Government / Central Government or sponsor bank, subject to extant legal provisions.

At the end of phase I, after RRBs would have achieved the critical size, a Standing Committee may be constituted, to function initially for atleast a year or so, in each of the State headed by RD of RBI Regional Office and members from NABARD and the concerned departments in State Government, to devise strategies for ensuring continued sustainability of RRBs through regulatory strengthening and business development, keeping in view the unique characteristics of the concerned states. After the functioning of RRBs stabilizes, the Committee's future role could be decided.

4. Governance and Regulatory issues

The Board of Directors of RRBs needs to be broadbased and professionalised by including experts from the fields of accountancy, rural / micro finance areas besides those who have specialized knowledge in the small / cottage / tiny industries / specialized agricultural and allied activities thriving in the area of operation of a given RRB. Hence, the composition of the Board should be RRB-specific, such that the members could really be of value addition to the concerned RRB, to function innovatively in its area of operation.

- Sponsor banks should be asked to maintain arms length distance with the RRBs to avoid any potential conflict of interest.
- After the first phase, compulsory licensing of RRBs by RBI may be used a regulatory tool to strengthen the system.
- The authorized and paid up capital of RRBs may be augmented from Rs.1 crore to Rs. 25 crores respectively, on a need-based case-to-case basis, by proportionately increasing the share/s of Central Government, State Government and sponsor bank.
- Since capital adequacy requirements ensure minimum balance sheet strength, appropriate CRAR may be prescribed for RRBs. To start with, it may be fixed at 8% as per Basle I norms.
- The sponsor bank as well as Central and State Governments may be allowed to issue recapitalization bonds on the lines of those issued for PSBs. This may be an acceptable measure to the respective Governments, from a fiscal point of view.

- To diversify the sources of funds available, RRBs which fulfill certain minimum criteria may be allowed to issue bonds which could be given SLR status to promote subscription thereto by the various players.
- NABARD may be advised to explore the feasibility of reducing the rate of interest charged on refinance. This would improve the profitability of RRBs.

5. Business Development

Rural India does provide ample opportunities for profitable banking. For instance, several creative ways of doing business in rural areas in India for the under privileged sections of the society have been highlighted by C.K. Prahalad in the book "The Fortune At The Bottom Of The Pyramid". ICICI Bank's example of its social initiative programme in carrying forward the Rural Development Initiative of the erstwhile Bank of Madura, after its merger with the former, provides an appropriate example to prove that financing the poor represents profitable banking. Since the target group for financing by RRBs is predominantly the segment representing the "bottom of the pyramid;" financing it can be done profitably. Likewise, two volumes published by the National Innovation Foundation, 'India Innovates' and `Down to Earth' magazine of The Centre for Science and Environment contain numerous examples of innovations and examples in rural India; which do provide reasonably good opportunities for financing by RRBs, apart the normal farming / other allied activities carried on in the rural areas. In the circumstances, in order to reposition the RRBs to take advantage of such latent opportunities, the primary prerequisite would be a paradigm shift in the mind set of all concerned, to the fact that financing of the poor is a profitable activity.

5.1 <u>HR issues</u>

As already stated, HR issues are critical in the entire exercise and the following are a few suggestions in this regard.

- The sponsor bank should be granted full autonomy in all areas relating to HRM viz., recruitment, posting, transfer, etc., in order to be able to deal with all situations arising out of mergers mentioned above.
- Sponsor bank should be mandated to post appropriate number of specialized staff to help the RRBs in professionalizing their advances portfolio, ALM etc.

- The Chairman and other officials posted to RRBs should have a fixed tenure of 3 / 5 years, after which they are to be repatriated to the sponsor bank. Instances have been cited where officials from sponsor banks were posted successively from one RRB to the other, thereby adversely affecting their morale and motivation levels.
- The quality and skill sets of RRB staff, in general, are widely held to be rather poor. Training is crucial in this context. Training institutions like CAB, NIRD etc. should develop dedicated programmes on business development, risk management, etc,. Certain factors mentioned at paragraph 5 also need to be highlighted in such courses.
- as a measure of staff motivation, awards may be instituted in each state for the best run RRBs, the criteria and the modalities of which could be worked out.

5.2 General

- To increase the non interest income, RRBs may be asked to actively consider distribution of mutual fund / insurance etc. products and also participate in referral arrangement therefor.
- The ceiling of 5% on housing loans for RRBs needs to be revised upwards, say upto 10%, because some of them faced problems in Gujarat in the wake of earthquake tragedy. Further, this measure would also go to alleviate, in a certain measure, the shortage of dwelling units in rural India.
- With a view to increasing the avenues for credit deployment, RRBs may be allowed to participate in consortium lending.
- The provisions of SRAEFESI Act, 2002 may be extended to RRBs, to bring about the necessary discipline in credit areas, as they are expected to increase in size and play an enhanced role in credit deployment.
- > State Governments may empower RRBs to collect their taxes.
- RRBs subject to certain set criteria can be considered for currency chest facility; which has its own advantages in terms of business development and visibility to RRBs in predominantly rural areas.
- Sponsor banks may be advised to improve the visibility of RRBs sponsored by them, wherever required, in a suitable manner. Sponsor banks may be asked to foot the bill in this regard.

- The sponsor bank should foster RRBs to specialize in financing of those activities which are most important in their respective command areas. NABARD may be advised that their Potential Linked Plans(PLPs) for the each district, should incorporate the details thereof including those mentioned at paragraph 5 above. If possible, a separate chapter pertaining to RRBs detailing the potential areas of economic activities, which can be financed by them in the district may be included in the PLP, to be of real guide to RRBs in lending activities.
- RRBs may also be asked to actively consider ways and means fostering organic links with organizations which are active in rural development like ITC, Jain Irrigation, etc., local associations representing the interests of the local manufacturers/producers etc, which would help improve their business potential. Several successful initiatives in rural India like ITC's e-choupal, Hindusthan Lever's soap market initiatives and Annapurna success story, etc., provide avenues for innovative financing.
- At the national level, a policy may be thought of with the concurrence of Central Government to close commercial bank branches (including that of the sponsor bank) in those rural areas where RRBs are present. This would increase the business potential of the RRBs. However, such closures should be done only after RRBs are suitably strengthened to take on the increased business workload.
- RRBs, to be on a sustainable business model in the long run, need risk management (including ALM), albeit on a less sophisticated scale as compared to commercial banks. Hence, certain basic guidelines on risk management may be made applicable to them. Further, to improve the tools available for their balance sheet management, RRBs may be encouraged to employ certain instruments like CDs / IBPCs, etc., to give the latitude required in such an exercise.

6. Conclusion

International experience of restructuring rural financial institutions indicate that only viable financial institutions with sustainable financial services can increase their outreach. The issue of viability is thus not only of relevance to the health and survival of the institutions but to the poor themselves. Accordingly, since repositioning of RRBs in Indian financial system would warrant major initiatives to be taken to improve their financial viability and sustainability, the suggestions above reflect the same. International

experience of various countries with regard to this segment is being looked into, for identifying new ideas / methods, which could be employed in the Indian context with suitable modifications. However, resolving HR issues would be the key to such an exercise.

Suggestions received during Governor's meetings with Chairmen/Nominee Directors of RRBs

- Wherever there are two or more RRBs sponsored by the same bank in contiguous regions, the feasibility of merging the same should be examined. Some proposals have already been forwarded to Central Government for merging of RRBs sponsored by the same bank in a few States.
- RDs to constitute in each State, a small Group comprising the RD of RBI, Officer in-Charge of NABARD, a senior representative each of the Sponsor Banks and the convener bank of SLBC, to monitor the flow of agricultural advances and advances granted by RRBs on a monthly basis. Empowered Committees for monitoring the performance of RRBs have been constituted in all Regional Offices.
- The feasibility of revising the statutory ceiling of rupees one crore on the authorized capital of the RRBs prescribed under the provisions of the RRB Act, 1976, by issuing an ordinance by the Government of India should be examined expeditiously.
- The management of the investment portfolio of the RRBs could be entrusted to the sponsor banks for improving the returns, for which, if necessary, appropriate service charges could be levied by the sponsor banks.
- The scale of finance permissible for RRBs was determined as per 1997 circular of RBI, which should be reviewed urgently. NABARD has already issued revised guidelines on the scale of finance.
- The RRBs which have exceeded the investment ceiling of 40% should be asked to submit action plan to bring the investments within the prescribed limits.
- RRBs may formulate a scheme to introduce rural Credit Card, on experimental basis, following a simplified procedure, with deregulated rate of interest and a prescription for minimum monthly repayment without undue emphasis on the end use of funds.
- RRBs should formulate credit plans for each year within 3 year rolling plan specifying agriculture component of the plan.
- RRBs should take lead in extending credit in those areas where DCCBs are weak/closed.
- State Governments should not discriminate between RRBs and Cooperative Banks in respect of stamp duty, mortgage fee, taxes, etc. besides documentation.
- RRBs should devise innovative credit products like General credit Card to suit requirement of rural clientele. They should adopt a holistic approach in fixing the credit limits of the rural farmers taking care of the consumption needs of their family. Formulation of new schemes should be done on an ongoing basis.

- Documentation may be simplified and the best RRBs experience be extended to other RRBs.
- Government may extend relaxation to RRBs from Limitation Act as is the case with cooperatives.
- A relook is necessary on the issue of supervision of RRBs.
