FOREWORD

Since 2010, the Central Government has been bringing out an annual Status Paper on public debt that provides a detailed analysis of the overall debt situation of the country. This paper provides a detailed account of debt operations and an assessment of the health of the public debt portfolio. This Status Paper is the eighth in the series.

- 2. Information on Public Debt of Government of India was also being published previously in other annual publications viz., "Handbook of Statistics on Central Government Debt" and "Debt Management Strategy (DMS)". These publications have been combined with the Status Paper, which provides all debt-related information at one place. This publication covers all information on various facets of debt management, Debt Profile of Central Government, Debt Management Strategy (2018-21), trends, composition and features of Central Government liabilities as well as consolidated General Government Debt and State Governments' debt as at end-March, 2018. It also provides a more nuanced assessment on aspects of debt sustainability in the context of internationally accepted debt performance indicators. The Paper also includes developments in public debt management since the last Status Paper, such as, setting up of PDMA for managing the public debt of Central Government, introduction of new FRBM framework, changes in Medium Term framework for investment by FPI's in Government Securities etc.
- 3. Government is primarily resorting to market-linked borrowings for financing its fiscal deficit. Conventional indicators of debt sustainability, i.e., level and cost of debt, indicate that debt profile of Government is comfortably placed in terms of sustainability parameters and is consistently improving. The Government's debt portfolio is characterized by prudent risk profile with low rollover risk as the share of short-term debt in total debt is kept within safe limits. The weighted average maturity of outstanding debt is increasing. India's debt is also characterized by fixed rate coupon instruments, insulating it from interest rate volatility, wide and diverse domestic investor base and market-aligned rates. Public debt is predominantly of domestic origin and denominated in domestic currency, insulating the debt portfolio from currency risk. The low share of external debt, almost entirely from official sources and largely on concessional terms, provides safety from volatility in the international financial markets.
- 4. The DMS for public debt for the next three years revolves around three broad pillars, low cost in medium term, risk mitigation and market development. The scope of DMS has

also been widened to include the external debt and small savings schemes under its ambit. The Government borrowings programme is planned and executed in terms of DMS.

5. This Status Paper is an outcome of the consistent efforts put in by officers working in Public Debt Management Cell (PDMC), Budget Division, Department of Economic Affairs, Ministry of Finance. I hope that this paper is eventually relied upon by academics, policy economists, students, rating agencies and the general public as a comprehensive and reliable source of information on India's public debt.

EXECUTIVE SUMMARY

Since 2010, the Central Government has been bringing out an annual Status Paper on Government Debt that provides a detailed analysis of the overall debt situation of the country, including external debt and State Government's Debt. Since 2015-16, this annual publication also includes, "Handbook of Statistics on Central Government Debt" and "Debt Management Strategy", which were published separately earlier, thus bringing all public debt related information at one place.

2. Government liabilities¹ have been broadly classified as debt contracted against the Consolidated Fund of India (defined as Public Debt) and liabilities in the Public Account, called Other Liabilities. Public debt is further classified into internal and external debt. Internal debt consists of marketable debt and non-marketable debt. Government dated securities and Treasury Bills, issued through auctions, together comprises marketable debt. Intermediate Treasury Bills (14 days ITB) issued to State Governments and select Central Banks, special securities issued to National Small Savings Fund (NSSF), securities issued to international financial institutions, etc., are part of non-marketable internal debt. Other Liabilities include liabilities on account of Provident Funds, Reserve Funds and Deposits, Other Accounts, etc. Total liabilities reported in the budget documents of the Central Government have been adjusted so that the outstanding debt truly reflects the outcome of fiscal operations of the Central Government. A summary of statistics presented in the paper is tabulated as under (various terms are explained in relevant chapters).

| Parameters/ Debt Indicators | 2013-14 | 2015-16 | 2016-17 | 2017-18 | Reference | | | |

Note: This Status Paper covers data from 2011-12 onwards. Data for prior years are available in earlier publications. The data in summary indicates the trend but has been restricted for few years for easy readability.

- 3. Some salient features of Central Government Debt are as under:
- i. Fiscal consolidation effort of the Centre under the umbrella of FRBM Act resulted in reduction of total liabilities from 47.5 per cent of GDP in March, 2014 to 45.9 per cent of GDP in March, 2017. The increase in March, 2018 is primarily on account of special securities issued for recapitalisation of PSBs. However, the increase in General Government Debt (GGD)-GDP ratio from 67.1% (2013-14) to 68.2% (2017-18) is primarily on account of higher borrowing by the States.
- ii. 93.8 per cent of total Central Government debt at end-March 2018 was denominated in Indian currency. External debt constituted 2.9 per cent of GDP at end-March 2018, implying low currency risk to GoI debt portfolio and its impact on balance of payments remains insignificant. The limited external debt is entirely from official sources, providing safety from volatility in the international capital markets.
- iii. The share of marketable securities in total internal debt, which was at 43 per cent of public debt (35.8 per cent of total liabilities) in 2000-01 increased to 93.0 per cent (82.1 per cent of total liabilities) at end-March 2018. The Government has also progressively moved towards alignment of administered interest rates with the market rates; revisions in interest rates on small savings schemes, General Provident Fund and similar funds, etc. are undertaken on a quarterly basis.
- iv. Most of the public debt in India is contracted at fixed interest rates, with only around 1.8 per cent of internal debt being at floating rate at end-March 2018, insulating debt portfolio from interest rate volatility and providing certainty and stability to budget in terms of interest payments.

- v. The Government is continuing with its efforts to elongate the maturity profile of its debt portfolio with a view to reduce the roll-over risk. The weighted average residual maturity of outstanding dated Government securities at end-March 2018 was 10.6 years which is higher compared to international standards with tenure of the longest security issued being 40 years. At end-March 2018, only about 26.1 per cent of outstanding stock of dated government securities had a residual maturity of up to 5 years, indicating a relatively lower roll-over risk in medium-term, which is further supported by active debt management operations in terms of switches and buybacks. This ensures that redemptions are handled smoothly.
- vi. The largely domestic and institutional investor profile contributes to stable demand for government securities. Ownership pattern of dated securities indicates a gradual broadening of market over time. The commercial banks remain the dominant holders even as their share declined from 61 per cent at end-March 2001 to 42.7 per cent at end-March 2018, which may partly be attributed to reduction in SLR requirements (from 25 per cent of NDTL of banks to current requirement of 19.50 per cent). The Insurance Companies and Provident Funds account for 23.5 per cent and 5.9 per cent respectively, of government securities; creating stable demand for long-term securities.
- vii. The debt sustainability indicators point out that debt is sustainable. IP-RR ratio (interest payments to revenue receipts) of Centre has decreased to 35.3 per cent in 2017-18 from about 52 per cent in the beginning of 2000s. Centre's Average Interest Cost (AIC) has declined to 7.2 per cent in 2017-18 from 8.1 per cent in 2000-01. A similar declining trend is also observed for States. The IP- RR ratio and Average Interest Cost (AIC) for States at end-March 2018 stands at 11.9 per cent and 7.7 per cent, respectively. The AIC is stable and well below the nominal GDP growth rate, which indicates that India is comfortably placed in terms of sustainability parameters of public debt.
- 4. Debt Management Strategy (DMS): Government published its first Debt Management Strategy (DMS) (earlier published across various documents of the Government and RBI) on December 31, 2015. Since then, it is being published as a part of this document. The DMS document comprises of three chapters, viz., Objectives and Scope of DMS; Debt Profile of Central Government: Current Status and Strategic Objectives and Medium-Term Debt Strategy (MTDS) [2018-21]
- i. DMS now covers all components of public debt of the Central Government, after inclusion of external debt and small savings schemes as against covering only internal marketable debt of the Central Government earlier. However, only a few aspects of these components are being brought under the scope, given the special nature of these debt/schemes.
- ii. The objective of the DMS is to ensure that the government's funding requirements are met at all times at low cost over the medium /long-term while avoiding excessive risks. The DMS has been articulated for the medium-term for a period of three years and is reviewed annually and rolled over for the next three years. As committed, the Government has made an annual update in the DMS, which is included in the Status Paper.
- iii. The present debt profile of the Central Government is analysed with regard to cost, maturity and potential risk factors. The risk analysis contains metrics such as average time to maturity, analysis of the redemption profile, average time to re-fixing, percentage of outstanding debt maturing in next 12 months, etc. This exercise indicates that the Government of India (GoI)'s debt structure is stable and risks are low.
- iv. The DMS revolves around three broad pillars, viz., low cost, risk mitigation and market development. Low cost objective is attained by planned issuances and offer of appropriate instruments to lower cost in the medium to long-term, taking into account market conditions and preferences of various

- investor segments. Low cost is also attained by improved transparency by way of a detailed issuance calendar for G-Secs and T-Bills.
- v. Scenario analysis, which contains expected cost of debt based on the assumptions of future GDP growth, interest and exchange rates and future borrowing needs, is included in MTDS. Debt sustainability indicators, such as, debt to GDP, average time to maturity and interest expense to GDP are projected under these scenarios. Stress tests of the debt structure on the basis of the economic and financial shocks, to which the government is exposed, are conducted, which indicate a very low level of stress. The analysis confirms that the debt is stable, sustainable over medium to long term.
- vi. The Government's borrowing programme are planned and executed in terms of DMS.

Part I

Status of Government Debt

Introduction

The Government has been publishing an annual Status Paper on Government Debt since 2010-11, which provides a detailed analysis of the Government's debt position. In addition to the debt position of Central Government, the Status Paper covers State Government and General Government Debt in this publication. Since 2016-17, Medium Term Debt Management Strategy has also been made a part of this Paper which provides information on Government's plan to achieve a composition of Government debt portfolio that reflects Government's preferences with respect to cost / risk trade-off.

1.2 The present Status Paper for 2017-18 is eighth in this series and reinforces the Government's commitment to keep the level of public debt within sustainable limits and to follow prudent debt

management practices. The objectives of debt management strategy are to mobilise borrowings at low cost over the medium to long-term, with prudent level of risk and stable debt structure, while also developing a liquid and well-functioning secondary domestic debt market.

Central Government Gross Fiscal Deficit / Liabilities

1.3 Gross fiscal deficit (GFD) as a percentage of GDP has declined from 5.9 per cent in 2011-12 to 3.5 per cent in 2017-18 (RE). The major sources of financing the gross fiscal deficit of the Central Government are market borrowings, small savings, State provident funds, external assistance and short term borrowings. The financing pattern of the GFD has been given in **Table 1.1** (A).

Status of Government Debt

1.4 Central Government liabilities include debt contracted against the guarantee of the Consolidated Fund of India (defined as Public Debt) as well as liabilities in the Public Account. These liabilities, as reported in the budget documents of the Central Government, are shown in Annex I.

Adjustment to Reported Central Government Liabilities

- 1.5 Total liabilities² reported in the budget documents of the Central Government need to be adjusted so that the outstanding liabilities truly reflect the outcome of fiscal operations of the Central Government. The details of these adjustments were discussed in detail in the Status Paper for 2010-11, which are briefly explained below:
- (i) External debt External debt is reported at historical exchange rates in the budget documents which does not capture the impact of exchange rate movements on these liabilities, when reported in domestic currency. Current value/liability of external debt may significantly differ from its historical value in view of movements in exchange rate over the life-cycle of these loans. Therefore, external debt is valued at current (end-of-year) exchange rates to reflect the true value of this liability.
- (ii) Liabilities under National Small Savings Fund (NSSF) - The investment in Central Government Special Securities against outstanding balance as on March 31, 1999, investment in Central Government special securities against collections net of withdrawals and reinvestment in Central Government special securities out of the sums

received on redemption of securities is considered as borrowing from NSSF by the Central Government for financing its deficit and is shown under the head 'Public Debt' of the Central Government. Remaining liabilities of the NSSF (i.e., total liabilities of NSSF netted with investment in special securities issued by the Central Government as explained above) are included under 'Public Account' Liabilities of the Central Government in the Union Budget, which also include borrowings by the States from NSSF against special securities and loans extended to public agencies from the NSSF. These borrowings of States and public agencies from NSSF are netted out from Public Account Liabilities stated in the Union Budget so that total liabilities of the Central Government reflect the outcome of fiscal operations of the Central **Following** Government only. the recommendations of Fourteenth Finance Commission (FFC), since 2016-17, all States/ UTs except four, namely Madhya Pradesh, Kerala, Arunachal Pradesh and UT of Delhi have opted to exclude themselves from borrowings through NSSF investments and hence, NSSF no longer finances their GFD. During 2017-18, loans were given to Food Corporation of India, National Highways Authority of India and Air India from NSSF.

1.6 These adjustments in Central Government debt are shown in **Table 1.1 (B)**. Any reference to total outstanding liabilities of the Central Government in this Paper means total adjusted outstanding liabilities of Central Government, as appearing in Table 1.1 (B).

² 'Liabilities' includes both Public Debt and Public Account liabilities unless specified otherwise. The words government 'liabilities' and 'debt' are used interchangeably in the paper.

^{*} As per CGA

1.7 The liability position of the Central Government, after making the above adjustments to the liability position reported in the Union budget documents, in nominal terms and relative to GDP, is presented in **Table 1.2** and **Table 1.3** respectively.

1.8 Central Government's total outstanding liabilities were ₹77.9 trillion or 46.5 per cent of GDP ³ as at end - March 2018. These liabilities

are broadly classified under two heads, i.e., Public Debt and Public Account Liabilities. Public Debt accounted for 88.3 per cent of total liabilities, while Public Account Liabilities constituted the remaining 11.7 per cent, at the end of March 2018. A brief description of the major components of total liabilities of the Central Government is given below:

³ Figures for end-March 2018 pertain to provisional estimates (PE) for Central Government. GDP at market prices for 2017-18 is based on Second Advance Estimates of National Income and Expenditure on GDP released by CSO on 28th February, 2018.

Public Debt

1.8 Public Debt denotes liabilities payable by the Central Government, which are contracted against the Consolidated Fund of India, as provided under Article 292 of the Constitution of India. Central Government's Public Debt was ₹68.8 trillion (or 41.0 per cent of GDP) as at end-March 2018. It has been further classified under two heads, i.e. Internal Debt and External Debt, with Internal Debt constituting 93.0 per cent of Public Debt at end-March 2018. Details of Public Debt are provided in Chapter II.

Internal Debt

1.9 Internal debt of the Central Government (₹64.0 trillion, 38.2 per cent of GDP at end-March 2018) largely consists of fixed tenor and fixed rate long-term market borrowings through the issuance of dated securities and short-term borrowings through treasury bills. As at end of March 2018, outstanding amounts under dated securities (₹51.2 trillion, 30.6 per cent of GDP) and treasury bills (₹3.8 trillion, 2.3 per cent of GDP) accounted for 74.4 per cent and 5.6 per cent, respectively of Public Debt. The remaining items in internal debt are the Central Government

special securities issued to National Small Savings Fund (NSSF), securities issued to international financial institutions, special securities issued against postal insurance and annuity funds (POLIF and RPOLIF), compensation & other bonds and 14-day Intermediate Treasury Bills issued to State Governments and a few foreign central banks for providing them an avenue to invest their surplus cash, which together constituted around 13.0 per cent of Public Debt.

1.10 While treasury bills are issued to meet short-term cash requirements of the Government, dated securities are issued to mobilise longer term resources to finance the fiscal deficit. All marketable debt is issued through auctions as per the schedule notified through half-yearly / quarterly auction calendars. Issuance of dated securities is planned and conducted taking into account the debt management objectives of keeping cost of debt low, while assuming prudent levels of risk and ensuring market development. An assessment of market liquidity conditions and market appetite for dated securities of different maturities influence the timing and maturity structure of primary issuances of dated securities.

External Debt

External Debt (₹4.83 trillion, 2.9 per cent of GDP as at end-March 2018) constituted 7.0 per cent of the total Public Debt of the Central Government. As State Governments are not empowered to contract external debt, all external loans are contracted by the Central Government and those intended for State Government projects are on-lent to States⁷. Most of the external debt is sourced from multilateral agencies such as International Development Agency (IDA), International Bank for Reconstruction and Development (IBRD), Asian Development Bank (ADB), etc. and official bilateral agencies. There is no borrowing from international capital markets. The entire external debt, in terms of original maturity, is long-term and a major part is at fixed interest rates. A detailed analysis of external debt is covered in Chapter II.

Public Account Liabilities

1.12 Liabilities of ₹9.14 trillion in the 'Public Account' (5.5 per cent of GDP at end-March 2018) include liabilities on account of National Small Saving Fund (NSSF), State Provident Funds, Reserve Funds and Deposits, and Other Accounts. NSSF liabilities accounted for 14.9 per cent of total Public Account Liabilities, while the shares of 'Reserve Funds and Deposits' and 'State Provident Fund' were 27.6 per cent and 21.9 per cent,

respectively. With the adjustment, as explained in para 1.5 (ii), NSSF liabilities in the Public Account represent the total borrowings of NSSF under small savings less the investment of NSSF in special securities issued by the Central Government (which is reckoned in Public Debt), State Governments and loans to public agencies. This net liability of the Central Government towards NSSF represents the net gain/loss in the NSSF accumulated over the years. Liabilities under 'Other Accounts' include, among others, special bonds issued to Oil Marketing Companies (OMC), fertiliser companies and Food Corporation of India (FCI). At end-March 2018, these liabilities under "Other Accounts" accounted for 35.5 per cent of Public Account Liabilities. Details of Public Account Liabilities are discussed in Chapter III.

Fiscal Consolidation

1.13 Central Government is committed towards fiscal consolidation in a phased manner. In India, fiscal consolidation or the fiscal roadmap for the Government is expressed in terms of the targets for fiscal parameters to be realised in successive budgets, as provided in the Fiscal Responsibility and Budget Management (FRBM) Act, 2003. The new FRBM framework has a twin focus on debt and fiscal deficit. The objective is to reach a fiscal deficit target of 3.0 per cent by 2020-21 and to reduce the Central Government Debt to 40 per cent of GDP by 2024-25 (Box 1).

⁷ This would require necessary correction while computing the consolidated debt for the country to remove inter-government transactions.

Box 1: FISCAL RESPONSIBILITY AND BUDGET MANAGEMENT ACT 2003

The Fiscal Responsibility and Budget Management (FRBM) Act, 2003 was enacted with a view to provide a legislative framework for reduction of deficit, and thereby debt, of the Government to sustainable levels over a medium term. The objective of the Act is to ensure inter-generational equity in fiscal management, long term macro-economic stability by achieving sufficient revenue surplus and removing fiscal impediments in the effective conduct of monetary policy and prudential debt management consistent with fiscal sustainability through limits on the Central Government borrowings, debt and deficits, and greater transparency in fiscal operations of the Central Government. Pursuant to the enactment of the Act, the Government framed and notified the FRBM Rules with effect from July 5, 2004.

| | | | |

- 1.14 Under the Medium Term Fiscal Policy (MTFP) Statement presented along with the Union Budget 2018-19, the Government of India is committed to follow the path of fiscal consolidation. The debt-GDP ratio of Central Government is projected at 48.8 per cent at end-March 2019. It is targeted to decline further to 46.7 per cent by end-March 2020 and 44.6 per cent by end -March 2021, restoring the long-term trend of decline in the Debt to GDP ratio.
- 1.15 The MTFP statement also indicates rolling targets for fiscal deficit. The fiscal deficit is budgeted at 3.3 per cent of GDP for the year 2018-19 and projected at 3.1 per cent each for 2019-20 and 2020-21 in accordance with the FRBM guidelines.

General Government Debt

1.16 General Government Debt represents the indebtedness of the Government sector (Central and State Governments). This is arrived at by consolidating the liabilities of the Central Government and the State Governments, netting out inter-governmental transactions viz., (i) investment in T-Bills (14-day ITBs and Auction Treasury Bills (91/182/364-day T-Bills) by States which represents lending by States to the Centre; and (ii) Centre's loans to States. At end-March 2018, General Government Debt worked out to be 68.2 per cent of GDP, representing a marginal increase over the previous year's level of 67.5 per cent (Table 1.5). A detailed analysis of Liabilities of States and General Government Debt has been provided in Chapter IV.

| | Table 1.5: General Government Liabilities | | | | | | | |

Debt Sustainability

1.17 The financial and debt crisis that originated in the developed world has brought into focus the importance of prudent fiscal management as well as debt management strategy in preventing the financial shocks to the country. A sustainability analysis in terms of trends in primary surplus and growth-interest rate differentials provides a broad idea about the fiscal health of Government. In addition, cost and risk characteristics of debt stock are also considered for determining the stability and sustainability of public debt. Thus, maturity profile of debt, its composition, cost, share of

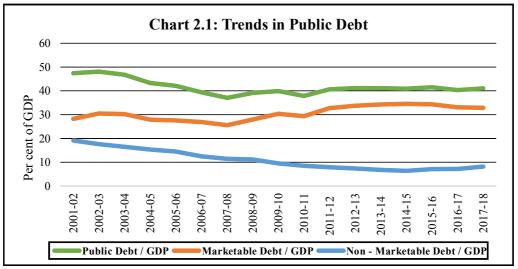

external debt, etc., are important parameters to assess debt sustainability.

1.18 Public debt in India is largely funded through domestic savings, using largely fixed interest rate instruments, and supported by a large domestic institutional investor base. These factors underlie long-term debt sustainability in the Indian context. The long maturity profile of India's debt reduces rollover risk. An assessment of public debt sustainability in India, in terms of some of the parameters, such as debt-GDP ratio, its composition/structure, ownership pattern, cost and other risk parameters, have been discussed in Chapter V.

Public Debt-Central Government

Public Debt, as defined in para 1.9 of this paper, stood at 41.0 per cent of GDP at end-March 2018 as against 40.3 per cent of GDP at end-March 2017 indicating a mild reversal of trend being seen from 2015-16. Chart 2.1 shows that the Public

Debt-GDP ratio recorded a falling trend during 2003-04 to 2007-08 but it rose thereafter till 2009-10. After a fall of 2.1 per cent in 2010-11, a mixed trend of mild rise and fall was observed during 2011-12 to 2017-18.

- **2.2** The composition of Public Debt, as shown in Table 2.1, indicates that it comprises of two broad components i.e. Internal Debt and External Debt. Internal Debt is further classified into marketable and non-marketable securities.
- **2.3** The share of Public Debt in total liabilities has gone up from 85.6 per cent as at end-March 2012 to 88.3 per cent at end-March 2018 largely on account of an increase in the ratio of internal debt to total liabilities. There has been a concomitant

fall in the share of 'other liabilities' in total liabilities during 2013-14 to 2017-18. The emphasis on market-related instruments for financing the gross fiscal deficit (GFD) has remained even as its share in total liabilities declined marginally during 2015-16 to 2017-18. The rise in the share of non-marketable securities is attributable to larger issuance of securities against small savings, compensation and other bonds and special securities issued to public sector banks in 2017-18.

INTERNAL DEBT 8

2.4 Internal debt of the Central Government was at 38.2 per cent of GDP and constituted 93.0 per cent of total public debt at end-March 2018. Marketable instruments constituted 80.0 per cent of Public Debt and 70.6 per cent of Total Liabilities at end-March 2018. Non-marketable securities constituted 12.9 per cent of Public Debt and 11.4 per cent of Total Liabilities at end-March 2018. It comprises of special securities issued against small saving, securities issued to international financial institutions, special securities issued against POLIF, and compensation and other bonds. As standing arrangement, Central Government also issues 14-day Intermediate Treasury Bills to State Governments against their surplus cash on every day end.

MARKETABLE SECURITIES Market Loans – Dated Securities

2.5 Dated securities are the predominant

instrument used for financing the GFD. These are issued as per the borrowing plan announced through half-yearly auction calendars covering April-September and October-March period. These bonds are issued in different maturity profiles and bear fixed/floating interest rate. The share of dated securities in public debt has been gradually increasing over the years, from 73.0 per cent at end-March 2012 to 74.4 per cent at end-March 2018, underscoring the increasing reliance on dated securities to finance the fiscal deficit. In addition, dated securities have also been issued as part of conversion of (i) special securities issued in lieu of ad hoc T-Bills (process completed in 2003-04) and (ii) recapitalisation bonds issued to nationalised banks (completed in 2007-08). A break-up of the stock of dated securities is given in Table 2.2.

| Percentage of GDP | 29.7 | 30.8 | 31.3 | 31.8 | 31.7 | 31.4 | 30.6 |

2.6 During 2017-18, net borrowing through dated securities (adjusted for redemption and buyback of securities) was ₹3,92,176 crore which was less than the revised estimate of ₹4,02,394 crore.

Maturity Profile of Dated Securities

2.7 The tenor of new issuances is a function of acceptable roll-over risk as well as market appetite across various maturity segments. Notwithstanding these determining factors, it has generally been the endeavour to elongate the maturity profile of dated

securities. Issuance of dated securities is planned and conducted, keeping in view the debt management objective of keeping cost of debt low, while assuming prudent levels of risk and promoting market development. Market borrowings through dated securities were broadly undertaken on these lines in 2017-18.

2.8 The proportion of dated securities maturing in less than 5 years witnessed a consistent decline since 2014 and went below 26.16 per cent in FY

⁸Debt contracted under Consolidated Fund of India from domestic lenders i.e., debt excluding MSS issuance, external debt and public account liabilities.

2018, indicating a relatively lower roll-over risk in the medium-term.

The maturity profile of outstanding stock of dated securities at end-March 2018 was tilted towards 5 - 10 year maturity bucket with a share of 32.14 per cent, closely followed by the 10-20 year maturity

bucket having a share of 28.57 per cent at end-March 2018. The shift in the composition of the maturity profile is reflected in the weighted average maturity of the dated securities. The pattern of maturity-wise composition of G-Secs over the last few years are given in Table 2.3.

| 20 years and above | 15.53 | 13.10 | 11.20 | 13.34 | 13.09 | 13.28 | 12.36 | 13.33 |

2.9 The weighted average maturity of outstanding stock of dated securities at end-March 2018 was 10.62 years. The details of maturity and yield on Central Government's dated securities in terms of issuances during the year and on outstanding stock are given in **Table 2.4.** The weighted average maturity of dated securities issued during 2017-18 decreased to 14.13 years from 14.76 years in 2016-17. This decline was due to lower issuances of securities having maturity of more than 15 years

in H2 of FY18. As can be seen, major part of issuances were made in 10-14 years maturity segment because of demand from the market for securities in this bucket. The share of different maturity buckets in the total issuances made in recent years is given in **Table 2.5.** Further details of maturity profile and are given at **Annex III** and **Annex IV** respectively.

2.10 The weighted average yield (WAY) is largely a function of the interest rate environment. The WAY for the issuances made in 2017-18 declined to 6.98 per cent even as the yields hardened during H2 of 2017-18 on account of both domestic and global developments. On the other

hand, the bid-cover ratio indicates the amount of bids received against the notified amount. The annual bid-cover ratio was at 3.27 during 2017-18. The details of Central Government market borrowings are listed in **Annex HB-VII**.

Coupon Rate on Dated Securities

2.11 Most of the dated securities carry fixed rate of interest. However, there is a small proportion of floating rate instruments, such as Floating Rate Bonds (FRBs) and Inflation Indexed Bonds (IIBs) (totalling 2.5 per cent of total outstanding stock of dated securities at end-March 2018), whose coupon is benchmarked to 182-day treasury bill yields and WPI inflation indices, respectively. The weighted average coupon of outstanding dated securities (including variable rate bonds) was 7.85 per cent at end-March 2018, lower from 7.99 per cent at end-March 2017.

2.12 Outstanding dated securities as on March 31, 2018 are listed in Annex V. At the end of March 2018, of the total outstanding dated securities, including FRBs and IIBs, 19.5 per cent have coupon rate up to 7 per cent; 28.5 per cent carry coupon rate of more than 7 per cent and up to 8 per cent; 46.0 per cent carry coupon rate of above 8 per cent and up to 9 per cent; and 6.0 per cent of total dated securities carry coupon rate of more than 9 per cent. As such, only a small portion of outstanding debt carry coupon rate above 9 per cent.

Box 2.1: Buy-back / Switches of Government Securities

The scheme of buy-back of GoI securities was implemented on July 19, 2003 when the Government of India bought back 19 high cost, illiquid securities for a total amount (Face value) of ₹14,434 crore and issued four liquid securities in lieu of these securities. In 2010-11, buy-back of securities as a cash management tool was undertaken through NDS-OM trading platform but was discontinued in view of poor response.

From 2013-14 onwards, buy-back/switches of G-Secs has been a regular feature of cash and debt management operations of the Central Government. These instruments help to manage the debt profile and cash flows in line with the debt management objectives of the Central Government. In this process, the redemption pressure/bunching of repayments in any given year is smoothened while also enabling improvement in secondary market liquidity in G-Secs. The details of repurchase (buy-back) and conversion (switch) operations undertaken during 2013-14 to 2017-18 are given as under:

under: Buy-back (repurchase) and Switch (Conversion) Operations of G-Secs undertaken during 2013-14 to 2017-18

| March 9, 2018 | - | - | 15968 |
| March 15, 2018 | 29249 | 13788 | - |
| March 22, 2018 | - | - | 1509 |
| Total 2017-18 | 89249 | 41555 | 58075 |

While the objective of repurchase operations is to reduce redemption pressure in the immediate following year, the conversion operations help to elongate the maturity profile of outstanding G-Secs. The quantum of repurchase operations depends on the availability of intra-year cash surpluses in the Central Government account. The cash outgo in conversion operations depends on the discount, if any, involved when a shorter tenor security is converted to longer tenor securities and adds to gross fiscal deficit of the Central Government.

2.13 The redemption profile of outstanding government securities at end-March 2018 in the next 5 years i.e., from the year 2018-19 is given in **Table 2.7**. During 2017-18, buy-back and switches were undertaken for an aggregate amount of ₹41,555 crore and ₹58,075 crore with a view to

smoothen the redemption profile for 2018-19. This places the portfolio in a comfortable position in terms of roll-over risk. The redemption profile suggests elevated roll-over risk during 2019-20 to 2022-23, underlying the need for moderation through buy-backs and switches.

[#] More issuances may happen in coming years.

Ownership pattern

2.14 Government securities are primarily held by domestic institutional investors. Ownership pattern of dated securities indicates a gradual broadening of investor base over time. Commercial banks continued to hold more than

40.0 per cent of total outstanding G-Secs, with their share showing an improvement to 42.68 per cent at end-March 2018 from 40.46 in 2017. The share of insurance companies has also increased since FY 14 to 23.49 per cent in FY 18. FPI's share has been growing [Table 2.8 and Box 2.2].

^{*} Outstanding as on March 31, 2018

^{**} As per MTFP statement, nominal GDP growth for 2018-19, 2019-20 and 2020-21 is assumed at 11.5%, 11.8% and 12.3% respectively.

Box 2.2: Investment by Foreign Portfolio Investors in Government Securities- Evolution since the introduction of Medium Term Framework in October 2015

The Medium Term Framework for investment by FPIs in Central Government Securities (G-Secs) and State Government Securities (SDLs) was introduced in October 2015. Under this framework, investment limits for FPIs were stipulated as under:

- Limits were specified as a percentage of outstanding stock at 5% for G-Secs and 2% for SDLs to be achieved by March 31, 2018
- Minimum tenure of investments fixed at 3 years

utilisation.

- FPI investment in any particular security capped at 29%
- Allocation between 'long-term' category and 'general' category to be in the ratio of 60:40
- Unutilised limits in 'Long-Term' category to be transferred to 'General' category.

On a review of the Medium Term Framework in July 2017, the following modifications were made:

- Overall cap of 5% for G-Secs and 2% for SDLs was left unchanged
- Future increases in the limit for FPI investment in G-Secs and SDLs to be allocated between 'long-term' category and 'general' category in the ratio of 75:25
- Practice of transferring unutilised limits of 'long-term' category to 'general' category was done away with.

Limits for investment by FPIs in G-Secs and SDLs for July-September 2017 were increased to ₹100 billion and ₹61 billion, respectively. In April 2018, it was decided to increase the limits for investment in G-Secs by 0.5% each in 2018-19 and 2019-20 to 5.5% of outstanding stock of securities in 2018-19 and 6% of outstanding stock of securities in 2019-20. The allocation of increase in the limit for investment in G-Secs between long-term category and general category has been done in the ratio of 50:50 for the year 2018-19. The revised limit for 'general' category also includes coupon reinvestment of ₹47.60 billion as on March 31, 2018. The limit for investment in SDLs continues to remain unchanged at 2% of outstanding stock of securities. However, out of the existing limit of ₹136 billion for 'long-term' sub-category under SDLs, an amount of ₹65 billion has been transferred to the G-Sec category.

| | | | | | (Am | ount in ₹ | Billion) |
|--|-----------|---------------|------------|----------|---------------|-----------|----------|
| | Central G | overnment | Securities | State De | velopmen | t Loans | Overall |
| | General | Long- Term | Total | General | Long- Term | Total | Total |
| Existing limits | 1,849 | 461 | 2,310 | 270 | - | 270 | 2,580 |
| (As on July 3, 2017) | | | | | | | |
| Revised limits | 1,877 | 543 | 2,420 | 285 | 46 | 331 | 2,751 |
| (From July 4, 2017) | | | | | | | |
| Limits as on April 6, 2018 | 1,913 | 651 | 2,564 | 315 | 136 | 451 | 3,015 |
| Revised limits for H1 of FY 19 (w.e.f April 12) | 2,073* | 787 | 2,860 | 348 | 71 | 419 | 3,279 |
| Revised limits for H2 of FY 19 (w.e.f October 1) | 2,233* | 923 | 3,156 | 381 | 71 | 452 | 3,608 |
| Utilisation as on October 3, 2018 | 1,592.65 | 460.48 | 2,053.13 | 24.18 | 0 | 24.18 | 2,077.31 |

In addition to the upward revision in investment limits under the revised framework for investment by FPIs in G-Secs, operational aspects of FPI investment have also undergone revisions in the FY 19; FPIs have been allowed to invest in securities (G-Secs and SDLs) with residual maturity below one year subject to the condition that such investment shall not exceed, at any point of time, 20% of the total investment of that FPI in that category. The cap on aggregate FPI investments in any Central Government security has been revised to 30% of the outstanding stock (20% earlier) of that security. Investment by any FPI (including investments by related FPIs) in G-Secs and SDLs is subject to 15% and 10% of prevailing investment limit for that category in the case of long-term FPIs and other FPIs, respectively. FPIs are permitted to invest in treasury bills issued by the Central Government.

A proposal to introduced as a separate channel, called the 'Voluntary Retention Route' to enable FPIs to invest in debt securities of any maturity (G-Secs, SDLs and corporate bonds), provided FPIs voluntarily commit to retain a required minimum percentage of their investments in India for a period of their choice is under consideration, which would provide an additional investment limit to the FPIs.

Treasury Bills

2.15 Treasury bills are discounted instruments which help the Government in managing its short-term cash flow mismatches. They also provide short-term investment avenues to the market and play the role of money market benchmarks. Central Government currently issues treasury bills of tenor of 91, 182, and 364 days. While there was a practice to auction 91-day treasury bills every week and 182 and 364-day treasury bills every fortnight, the GoI has started auctioning all 3 tenures treasury bills (91D/ 182D/ 364D) every

week since October 4, 2017. Auction calendars for treasury bills are announced quarterly before the beginning of each quarter.

2.16 Treasury Bills generally have a negligible contribution in financing GFD except in 2008-09 and 2011-12 when the large unanticipated increase in fiscal deficit, compared to budget estimates, necessitated higher use of treasury bills to fund the fiscal deficit. The increase in stock of Treasury bills during 2011-12 to 2017-18 is shown in **Table 2.9**.

| | Tabl | e 2.9: Outsta | anding Stock | of Treasury | Bills | | |
|--|---------|---------------|--------------|-------------|---------|---------|---------------|
| | | | | | | | (in ₹ crore) |
| Components | | | | Actuals | | | |
| | 2011-12 | 2012-13 | 2013-14 | 2014-15 | 2015-16 | 2016-17 | 2017-18 PR |
| 91 Day Treasury Bills | 124656 | 105142 | 125761 | 128961 | 132855 | 106840 | 138726 |
| 182 Day Treasury Bills | 52001 | 64196 | 76417 | 77337 | 77807 | 85436 | 86872 |
| 364 Day Treasury Bills | 90378 | 130467 | 136956 | 143152 | 154033 | 142526 | 159685 |
| Total Outstanding | 267035 | 299805 | 339134 | 349451 | 364695 | 334802 | 385283 |
| Treasury Bills Percentage of Public Debt | 7.5 | 7.3 | 7.3 | 6.8 | 6.4 | 5.4 | 5.6 |
| Percentage of Total | 6.4 | 6.4 | 6.4 | 6.0 | 5.6 | 4.8 | 4.9 |
| Liabilities Percentage of GDP | 3.1 | 3.0 | 3.0 | 2.8 | 2.6 | 2.2 | 2.3 |

2.17 The outstanding stock of treasury bills has stabilised since 2013-14 both in terms of per cent of GDP as well as per cent of total liabilities.

Treasury bills accounted for 4.9 per cent of total liabilities (or 2.3 per cent of GDP and 5.6 per cent of Public Debt) at end-March 2018.

⁹ Refers to all FPIs registered by a non-resident entity.

NON-MARKETABLE SECURITIES 14-Day Intermediate Treasury Bills

2.18 14-day Intermediate Treasury Bills (ITBs) are non-marketable instruments issued to the State Governments and select Central Banks to enable them to deploy their short-term surplus cash at a fixed interest rate. The surplus cash balance of State Governments is automatically invested in these instruments. Conversely, a negative cash position of a State Government is financed first by rediscounting existing investment in these instruments. From January 30, 2017 onwards, implicit yield payable on 14-day ITBs has been linked to Reverse Repo rate announced by RBI and

has been set at Reverse Repo rate minus 200 basis points, subject to an upper ceiling of 5 per cent. The bills can be rediscounted at Reverse Repo minus 150 basis points subject to an upper ceiling of 5.5 per cent. The downward revision in yield on 14-day ITBs is expected to induce States to lower their cash surpluses and resort to just in time borrowing.

2.19 A sharp rise in investments in 14-day ITBs mirrors the impact of accumulation of cash surpluses with States over the years. The total amount outstanding under ITBs and investments of State Governments in these bills are shown in **Table 2.10**.

| | | (At end-March, in ₹ crore) |
|------|-------------------|------------------------------------|
| Year | Total 14-day ITBS | Investment by State Governments |

| 2017 | 156570 | 155250 |
| 2018 | 151038 | 150340 |

Cash Management Bills

2.20 During 2009-10, a new short-term borrowing instrument, known as Cash Management Bill (CMB) was introduced to meet unanticipated cash flow mismatches of the Government. CMBs are non-standard, discounted Treasury bills generally issued with a maturity of less than 91 days. They have the generic character of Treasury bills as these are issued at a discount and redeemed at face value on maturity. The tenor, notified amount and date of issue of this instrument depend upon the cash requirements of the Government. As CMBs are generally repaid in the same financial year, they do not finance the budget

Source: State Finances: A Study of Budgets, 2017-18 & 2018-19, RBI

deficit. CMBs were first issued on May 12, 2010. CMBs are issued at a short notice and investment in these instruments is recognized as an eligible investment for SLR purpose under Section 24 of the Banking Regulation Act, 1949.

2.21 CMBs amounting to an aggregate amount of ₹1,07,195 crore were issued during 2013-14. During the years 2015-16 and 2016-17, resorting to CMBs was not required due to no incidence of unanticipated cash deficit. In 2017-18, CMBs of ₹1,50,000 crore were issued during the first half of the financial year to meet huge but temporary cash flow mismatches in the Government cash account.

| Table 2.11: Amount raised throu | gh Cash Management Bills |

CMBs issued under MSS are separate & are not included here.

Securities issued to International Financial Institutions

- 2.22 These securities are issued to International Monetary Fund, International Bank for Reconstruction and Development, International Development Association, Asian Development Bank, African Development Bank and International Fund for Agricultural Development. These special securities are issued primarily towards
- India's subscriptions/contributions to these institutions;
- ii. Special Drawing Rights (SDRs) for subscribing to increased quota in the IMF; and
- iii. Maintenance of value obligations to IMF.
- 2.23 These liabilities are non-interest bearing in nature. The total outstanding value of these rupee securities issued to international financial institutions as at end-March 2018 is ₹1,04,370 crore or 0.6 per cent of GDP, showing a decline from ₹1,08,740 crore as at end-March 2017. They accounted for 1.5 per cent of Public Debt and 1.3 per cent of total liabilities of the Central Government.

Compensation and other Bonds

2.24 This category includes various types of special purpose bonds such as Relief Bonds, Saving Bonds, and other bonds issued under Sovereign Gold Bond/ Gold Monetisation Schemes by the Central Government. These bonds carry fixed rates of interest and are generally launched for retail subscription. During 2017-18, the outstanding amount under this head more than doubled to ₹51,209 crore at the end of March 2018 (₹25,108 crore at end-March 2017), accounting for 0.3 per cent of GDP and 0.7 per cent of Public Debt.

Sovereign Gold Bond (SGB) is a Government security denominated in grams of gold. SGBs were launched in November 2015 to migrate investment from physical gold to paper gold. One of the major objectives behind launching the scheme was to reduce the pressure on Current Account Deficit and the Rupee, arising partly from heavy imports of gold and consequent forex outflow. The product is targeted at retail investors who generally prefer to invest their savings in physical gold. The investment in gold bonds is at the prevailing price, as notified by the Indian Bullion and Jewellers Association. There are limits placed on the maximum investment that can be made by the retail and other investors allowed to invest in these bonds. The tenure of these bonds is eight years, with provisions of premature redemption and redemption on maturity is at the prevailing gold prices on that date. The investors are also paid interest on the amount invested at the rate of 2.50 per cent per annum, payable semiannually. The Government has issued Gold Bonds worth ₹6,863.19 crore till April 2018.

Securities issued against small savings (National Small Savings Fund)

2.26 All collections under small savings schemes are credited to the National Small Savings Fund (NSSF), established in the Public Account of India since April 1999. The outstanding investments of NSSF in Central Government Special Securities, which are part of Public Debt, fall in three categories. Category I comprises securities which were issued after inception of the NSSF in April 1999 against the outstanding balances under various small savings schemes at the close of March 31, 1999. Category II includes special Central Government securities issued

against net collections in the Fund from April 1, 1999 and Category III comprises of special Central Government securities issued out of the sums received on redemption of old securities.

Accumulated liabilities at the inception of NSSF (₹1,76,221 crore) were taken over by the Central Government, of which ₹64,569 crore (Category I) was outstanding as at end-March 2018. All withdrawals as well as interest payments are made out of the accumulations in this Fund. Pursuant to the recommendation of the Fourteenth Finance Commission, most states (except for Madhya Pradesh, Kerala, Arunachal Pradesh and Delhi) have stopped borrowings from the NSSF, which has increased the availability of funds through net collections under small saving schemes to the Central Government for the purpose of financing its GFD. As detailed in para 1.10 of Chapter I, the borrowings of the Central Government from the NSSF through special securities are part of Public Debt.

2.28 At end-March 2018, the outstanding liabilities of the Central Government to NSSF was ₹4,83,919 crore amounting to 7.0 per cent of public debt and 6.2 per cent of total liabilities. Outstanding securities issued against net collections in different years amounted to ₹66,003 crore (Category II) and securities issued against redemption amounted to ₹2,50,720 crore (Category III) at end-March 2018. The details of existing special securities with applicable interest rates are given in **Annex VI**.

The interest rates on various small saving schemes are provided in **Annex VII**.

2.29 Postal Life Insurance: Government issued Special Securities to Directorate of Postal Life Insurance with a view to convert part of the frozen corpus of Post Office Life Insurance Fund (POLIF) and Rural Post Life Insurance Fund (RPOLIF) into market-linked dated securities. Securities worth ₹7,000 crore each were issued in 2010-11 and 2011-12 while securities worth ₹6,080 crore were issued in 2012-13. The total outstanding amount of these Special securities remained at ₹20,894 crore till end-March, 2018. The liabilities, which were earlier reported under Public Account in the Union Budgets, have become part of Public Debt.

2.30 Issuance of Special Securities to public sector banks: Special non-transferable securities amounting to ₹80,000 crore have been issued to public sector banks towards their recapitalization in 2017-18. The aim is to provide additional capital support to these banks.

EXTERNAL DEBT

2.31 Under Article 292 of the Constitution of India, the Central Government may borrow from within as well as outside the territory of the country¹⁰. External debt at current exchange rates stood at 6.2 per cent of Central Government's total liabilities and 7.0 per cent of Public debt at end-March 2018. The trends in external debt at book value and current exchange rate are shown in **Table 2.12** and detailed in **Annex HB-4**.

| | | | | | | (| in ₹ cror |

| Percentage of Total Liabilities of Centre | 7.8 | 7.1 | 7.0 | 6.2 | 6.2 | 5.8 | ϵ |
| Percentage of GDP | 3.7 | 3.3 | 3.3 | 2.9 | 3.0 | 2.7 | 2 |

¹⁰ Executive power of State Governments extends only to borrowing from within the territory of India as per Article 293 of the Constitution.

- 2.32 External debt (at current exchange rate) as percentage of GDP has moved in a narrow range in the recent period and stood at 2.9 per cent of GDP at end-March 2018. This implies that debt portfolio of Government has low currency risk and its potential impact on balance of payments of the country also remains insignificant.
- **2.33** Additionally, a major portion of external debt is financed by multilateral institutions (68.4

per cent of total external debt at end-March 2018), while bilateral sources account for the remaining 31.6 per cent (**Table 2.13**). Loans from multilateral institutions are long term and largely on concessional terms, further lowering the risk from external borrowings. The Central Government has not resorted to direct borrowing from international capital markets. The details on agency-wise outstanding external loans from 2003-04 onwards are shown in **Annex HB-3**.

2.34 External debt is predominantly denominated in three currencies *viz.*, SDR, USD and Yen which together accounted for 95.1 per

cent of total external debt as at end-March 2018. A small portion (4.8 per cent) was denominated in Euro (Table 2.14).

2.35 To summarise the Chapter, Public Debt as percentage of GDP has moved in a narrow range in recent years. The emphasis continues to be on market-related borrowing instruments for the purpose of financing of GFD, which is evident from the fact that nearly 80.0 per cent of Public Debt was held in marketable debt instruments at end-March 2018. Internal debt constitutes a major part of Public Debt and within the Internal Debt, fixed coupon dated securities constitute a major portion. Maturity profile of outstanding dated securities indicates a relatively low roll-over risk in the debt portfolio. Weighted average yield of primary

issuance of dated securities which is broadly a function of interest rate environment, was lower in 2017-18. The ownership pattern indicates a gradual broadening of investor base with commercial banks and insurance companies being the predominant investor categories. The share of external debt in the total Public Debt has remained low over the years and majority of external debt comprises of long term loans. All these features indicate the soundness of Public Debt portfolio of the Government and no point of concern is exhibited.

Public Account Liabilities-Central Government

All public money received by or on behalf of the Government of India, other than those for credit to the Consolidated Fund of India, are credited to the Public Account of India¹¹. The receipts into the Public Account and disbursements out of it are generally not subject to vote by the Parliament. Receipts under Public Account include NSSF¹², Provident Fund contributions of Central Government employees, security deposits and

other deposits received by the Government, securities issued in lieu of oil/food/fertilizer subsidies, etc. In this respect, the Government is acting as a Banker or Trustee and refunds the money on demand after completion of the implicit contract/ event. The Public Account Liabilities position of the Central Government is presented in **Table 3.1**.

3.1 Public Account liabilities, at ₹9.14 trillion at end-March 2018, constituted 11.7 per cent of total liabilities (12.2 per cent of total liabilities at end-March 2017). The public account liabilities exhibited a steady decline since 2013-14. The major categories under this head are discussed below.

A. National Small Savings Fund (NSSF)

3.2 As mentioned in para 1.5 (ii) and 1.12, only a part of the liabilities under NSSF are utilised for

financing the fiscal deficit of the Central Government through issuances of special securities. That part of liabilities of NSSF is explicitly included in Public debt of the Central Government in the Union Budget as well as in this paper. Similarly, a portion of remaining liabilities, i.e., total liabilities of NSSF netted with special securities issued to Government of India, is utilised for financing State Government fiscal deficits

¹¹ Clause (2) of Article 266 of the Constitution of India.

¹² The gap between total liabilities in respect of small saving collections and investments of NSSF is shown under this head.

Status of Government Debt

(from 2016-17 onwards NSSF fund utilised by only Arunachal Pradesh, Kerala, Madhya Pradesh and UT of Delhi) through issuances of special securities by State Governments, and also for extending loans to public agencies. As this part of NSSF liabilities does not reflect the outcome of fiscal positions of Government of India, this has been netted as explained in para 1.5 (ii). However, there is a gap between total liabilities of NSSF and special securities issued to NSSF by the Government of

India and State Governments together, and investment of NSSF in public agencies. This gap¹³ is the liability of Central Government towards NSSF, representing the net loss in NSSF accumulated over the years. This liability (including cash balance, if any) of the Central Government is included in the Public Account of Government of India under the head 'NSSF'. Trends in assets and liabilities of NSSF are given in **Table 3.2**.

| | Table 3.2 | 2: Liabilities | and Investn | nents of NSS | F | | |

B. State Provident Funds

3.3 The share of accumulated Provident Fund contributions of Central Government employees

under the head 'State Provident Funds' remained unchanged at 2.6 per cent of total liabilities of the Central Government in 2017-18 (**Table 3.3**).

| | Table 3.3: State Provident Funds | | | | | | | | | | | |

| Percentage of GDP | 1.4 | 1.3 | 1.3 | 1.2 | 1.2 | 1.2 | 1.2 | | | | | |

C. Other Accounts

3.4 'Other Accounts' include sundry items such as special deposits by retirement funds with the Central government, securities issued in lieu of subsidies, other deposits, etc. The share of 'other

accounts' in total liabilities maintained its downward trend and stood at 4.2 per cent at end-March 2018.

3.5 Certain subsidy payments were made by the Central Government in the form of special

¹³ Note: Fourteenth Finance Commission Report recommended that State Governments be excluded from the operations of the NSSF, with effect from April 1 2016, even as they should honour the obligations already entered into insofar as servicing and repayment of outstanding debt is concerned

securities issued to Oil Marketing Companies, fertilizers companies and Food Corporation of India in the past. These bonds are part of Public Account liabilities. Liabilities on account of these special securities had increased significantly during

2005-06 to 2008-09. As a result of redemption of some of these securities, there has been a decline in these liabilities in absolute terms and also as a ratio of total liabilities (**Table 3.4**).

| | Table 3.4: Special Securities issued in lieu of subsidies | | | | | | | | | | | |

D. Reserve Funds, Deposits and Advances

3.6 Reserve Funds and Deposits constituted 3.2 per cent of total liabilities as at end-March 2018, higher from 3.0 per cent at end-March 2017 and at par with end-March 2012. At end-March 2018, interest bearing liabilities under 'Reserve Funds and Deposits' constituted 56.9 per cent of total liabilities under this head whereas the non-interest bearing liabilities stood at 43.1 per cent. A more detailed account is given below.

Reserves

3.7 Reserve Funds or Reserves in Public Account are constituted by the Central and State Governments under statutory provisions or otherwise. These funds are created with the objective of expending money for specific purposes for which they have been constituted. Reserve Funds constitute of balance sheet reserves of commercial undertakings such as Railways, grants by other governments and public subscriptions (e.g. relief funds), contributions made by outside agencies to the Central Government and earmarked for specific

institutions e.g. the Indian Council of Agricultural Research, etc.

- **3.8** Reserve Funds are classified into following two categories, based on their interest liability or otherwise:
- (i) Reserve Funds bearing interest such as Development Fund, Capital Reserve Fund, Revenue Reserve Fund, General and other Reserve Fund and Depreciation/Renewal Reserve Fund.
- (ii) Reserve funds not bearing interest such as Famine Relief Fund, National Disaster Relief Fund, Guarantee Redemption Fund, Central Road Fund, Railway Safety Fund, Rural Employment Guarantee Fund, etc.
- 3.9 When reserves are created (either in part or in full) out of the money set aside by the Government from the Consolidated Fund of India, the transfers to and the expenditure from the reserves are required to be voted by the Parliament. This procedure may not apply to certain Reserve Funds which are governed by special arrangements.

| | Table 3.5: Reserve Funds | | | | | | | | | | | |

Deposits

funds to total (%)

3.10 Deposits received by the Government are reckoned in the Public Account. This flow of money as deposit comes as virtue of certain statutory provisions or general/ specific orders of the Government. These deposits may be interest bearing or non-interest bearing. Additionally, the interest rate on these deposits are fixed from time to time and not directly linked to the market rates.

Examples of interest bearing deposits include civil deposits, railway deposits and other deposits. Non-interest bearing deposits largely consist of defence deposits, postal deposits, telecommunication deposits, National Investment Fund, etc. Deposit liabilities as per cent of total liabilities at end-March 2018 increased slightly to 2.7 per cent from the previous year's level as shown below:

| Table 3.6: Deposits - bearing interest and not bearing interest | | | | | | | | | | |

Advances

3.11 Government occasionally makes advances to public and quasi-public bodies and to individuals, under special laws or for special reasons. These majorly fall in the heads of civil, defence, railway, postal and telecom. The

monitoring of repayment of the loans or advances is done, keeping a close watch over the repayment of principal and realization of interest. Under the head 'Advances' in the Public Account, as on March 31st, 2018, there was a balance of (-) ₹701 crore (Table 3.7).

3.12 The declining share of Public Account Liabilities in the total liabilities of the Government till 2017-18 is attributable to decline in the contribution of 'Other Accounts' caused due to

the redemption of these securities. The share of other components of Public Account Liabilities in the total liabilities of the Central Government has broadly remained stable in the recent years.

General Government Debt

General Government debt is the consolidated debt of the Central Government and State Governments. This is important from the point of view of analysing sustainability aspect of consolidated debt position of the Government sector as a whole. Central Government debt position and related aspects have been covered in the previous chapters. This chapter gives a brief account of the debt profile of State Governments, followed by a description of trends and composition of the General Government debt.

State Government Debt14

4.1 The Constitution of India empowers State Governments to borrow only from domestic sources (Article 293(1)). Further, under Article 293(3) of the Constitution of India, "A State may not without the consent of the Government of India raise any loan if there is still outstanding any part of a loan which has been made to the State by the Government of India or by its predecessor Government, or in respect of which a guarantee has been given by the Government of India or its predecessor Government.

Financing of Fiscal Deficit - States

4.2 The major sources of financing of the gross fiscal deficit (GFD) of the State Governments are market borrowings, loans from financial institutions and the

Centre. State Governments also incur liabilities in the public account through provident funds, reserve funds, deposits etc. The composition of financing pattern of budget deficit of state Governments has exhibited a tilt towards market borrowings in the recent period. The share of net market borrowings in GFD financing increased from an average of 48.5 per cent during 2005-2010 to 66.8 per cent during 2010-2016; it increased further to 74.9 per cent of GFD in 2017-18 and is budgeted to finance 90.6 per cent of GFD in 2018-19.

Pursuant to the recommendations of the Fourteenth Finance Commission, all States/UTs, barring Madhya Pradesh, Kerala, Arunachal Pradesh and Delhi, have opted to exclude themselves from borrowings from the National Small Savings Fund with effect from April 1, 2016. As a result, the share of NSSF in financing of GFD of states has turned negative from 2016-17 onwards and is budgeted at 6.8 per cent of GFD in 2018-19.

Financing through 'Deposits and Advances' is also budgeted to increase to 4.3 per cent of GFD in 2018-19 from 2.1 per cent of GFD in 2017-18 (RE). In 2017-18, 24.4 per cent of GFD of States was financed through drawdown in cash balances and withdrawal from cash balance investment account. States' cash balances and withdrawal from cash balance investment account are budgeted to finance 8.2 per cent of GFD in 2018-19 (Table 4.1).

Liabilities of State Governments

4.3 The outstanding liabilities of the State Governments have been consistently registering double digit growth since 2012-13 with the exception of 2014-15. Total liabilities of State

Governments increased to ₹40.2 trillion at end-March 2018 from ₹36.3 trillion at end-March 2017. The annual growth rate as at end-March 2018 stood at 10.8 per cent and is budgeted to increase to 12.9 per cent in 2018-19.

Table 4.2: Outstanding Liabilities of State Governments

(At end-March, in Per cent)

| Year | Amount (₹ Billion) | Annual Growth (in per cent) | Debt/ GDP (in per cent) |
|---------|-----------------------|-----------------------------|----------------------------|

- **4.4** Outstanding liabilities of State Governments have increased sharply during 2015-16 and 2016-17, following the issuance of UDAY bonds in these two years, which was reflected in an increase in liability-GDP ratio from 21.7 per cent at end-March 2015 to 23.4 per cent at end-March 2016 and further to 23.8 per cent at end-March 2017. The total outstanding liabilities as a per cent of GDP stood at 24.0 per cent as at end-March 2018 and is expected to move upward to 24.3 per cent at end-March 2019.
- **4.5** Consistent with the classification of Central Government liabilities, State Government debt is discussed under two broad categories viz., public debt and other liabilities. The component-wise liability position of State Governments is presented in Table 4.3 while Table 4.4 presents the same information as a ratio to GDP. A graphical representation of the State Government liabilities is given in **Chart 4.1.**

Public Debt

- 4.6 Public debt at ₹32.3 trillion at end-March 2018, constituted 80.3 per cent of total liabilities of State Governments (19.3 per cent of GDP). While its contribution to total liabilities had remained largely stable till 2013-14, its composition has seen a significant change reflected in a sharp increase in the share of market loans vis-à-vis all other components. Market loans (dated securities) constituted 54.7 per cent of total liabilities at end-March 2018, up from 42.5 per cent at end-March 2014. The share of NSSF has been steadily decreasing over the years. Borrowings from the NSSF accounted for 11.8 per cent of total liabilities at end-March 2018, down from 14.0 per cent at end-March 2017.
- 4.7 Loans from the Centre, which have also been decreasing over the years, accounted for only 4.1 per cent of total liabilities at end-March 2018. State Governments also take negotiated loans from banks, Life Insurance Corporation of India, General Insurance Corporation, National Bank for Agriculture & Rural Development, National Cooperative Development Corporation and other financial institutions. At end-March 2018, these loans constituted 4.0 per cent of total liabilities as against 3.9 per cent at end-March 2017 (Table 4.3).

Increasing share of market loans as per cent of GDP in the States' borrowing is a reflection of greater recourse to market by the States to finance their fiscal deficit replacing other components of financing of GFD (**Table 4.4**).

Maturity Profile of State Development Loans (SDLs)

- **4.8** The maturity of the outstanding stock of State Government securities has remained largely concentrated in the tenor of 6 to 10 years since the last decade. The downward trend has been observed since 2011-12 with a shift in maturity to short term borrowing of 1 to 5 years. Since 2015-16, State Governments have shown a renewed interest in borrowing using securities having maturity above 10 years. The maturity profile indicates medium term redemption pressure for State Governments.
- 4.9 The weighted average yield for State Government securities on primary issuances shows an upward trend from 2008-09 and peaked to 9.18 per cent in 2013-14. Thereafter the trend shows a reversal with a decline to 7.67 per cent in 2017-18. The details of the maturity profile for State Government securities is given in **Table 4.5** while the weighted average yield is given in **Table 4.6**.

Status of Government Debt

Other Liabilities

4.10 'Other liabilities' of State Governments stood at ₹7.9 trillion at end-March 2018, up from ₹7.4 trillion at end-March 2017. However, relative to GDP, there has been a marginal reduction over the same period from 4.9 per cent to 4.7 per cent. The share of 'other liabilities' in total liabilities has been declining since 2013-14 and constituted 19.7 per cent of total liabilities at end-March 2018. The major constituent of 'other liabilities' is State Provident Fund at 48.7 per cent of other liabilities (and 9.6 per cent of total liabilities) at end-March 2018. 'Deposits and Advances' and 'Reserve Funds' are the other components accounting for 40.3 per cent and 10.4 per cent respectively, of other liabilities at end-March 2018. Contingency Fund constituted 0.6 per cent of other liabilities at end-March 2018 (Table 4.7).

State Governments as a group have 4.11 exhibited a tendency to hold large cash surpluses/ investments in Cash Balance Investment Account on a consistent basis while at the same time resorting to market borrowings to finance their GFD. This indicates scope for reducing the quantum of market borrowings by State Governments in case they bring down their cash surpluses (parked as investment in treasury bills of the Central Government). An adjustment made to this effect shows that total liabilities of State Governments could have been lower at 22.7 per cent of GDP against 24.0 per cent without adjustment, at end-March 2018 (Table 4.8). This factor, however, does not affect consolidated General Government Debt, as investment in treasury bills by States is an inter-Government transaction that is netted out of consolidated General Government Debt position.

General Government Debt

- 4.12 General Government liabilities are arrived at by consolidating liabilities of the Central Government and State Governments. General Government liabilities are divided in two broad components viz., public debt and other liabilities. As General Government Debt represents the liability of the Government sector as a whole, the following inter-Government transactions are netted out to derive General Government Debt.
 - (i) Investment of State Governments in treasury bills issued by the Central Government;

- (ii) Loans from the Central Government to States.
- **4.13** After making these adjustments, the consolidated 'public debt' of the General Government at ₹97.40 trillion works out to 58.1 per cent of GDP at end-March 2018, higher than 57.0 per cent at end-March 2017. 'Other liabilities' in General Government debt constituted 10.2 per cent of GDP at end-March 2018. Total liabilities of the General Government at end-March 2018 amounted to 68.2 per cent of GDP. (**Table 4.9**).

GDP Figures are based on the Second Advance Estimates 2018-19 released by CSO

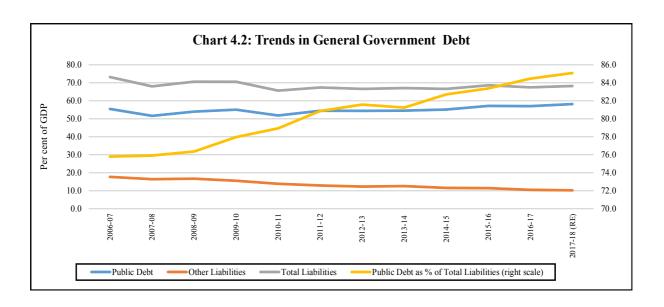

^{*}Figure for Public Debt of Centre is based on actuals

[^]Figures from year 2015-16 onwards have been taken from the Receipts Budget 2018-19

Status of Government Debt

- **4.14** Total general Government liabilities, as per cent of GDP, have moved in a narrow range during 2011-12 to 2017-18 (**Chart 4.2**). The share of public debt in total liabilities has increased with a corresponding decline in the share of other liabilities. At end-March 2018, public debt accounted for 85.1 per cent of total liabilities as against 80.9 per cent at end-March 2012. The decline in the share of 'Other Liabilities' is attributed primarily to greater reliance on market borrowings by both the Central and State Governments.
- **4.15** To sum up, the State Governments' debt-GDP ratio stood at 24.0 per cent at end-March 2018

and is budgeted to marginally increase to 24.3 per cent by end-March 2019. The share of public debt has increased while that of other liabilities has declined within the overall debt portfolio of the State Governments. Within the public debt, the share of market borrowings has increased while that of borrowings from the NSSF has exhibited a steady decline to 14.7 per cent at end-March 2018 from a high of 34.3 per cent at end-March 2007. Taking the Central and State Governments together, the ratio of General Government liabilities to GDP was in the range of 66.6 per cent to 68.6 per cent during 2011-12 to 2017-18.

Assessment, Emerging Issues and Road Ahead

This chapter provides an assessment of the debt profile of the Government in terms of cost and risk characteristics. Sustainability of sovereign debt has always been an important indicator of overall macroeconomic health of a country. This parameter has become all the more relevant in the context of happenings around the globe, particularly since the global financial crisis. Most of the economies of the world had undertaken fiscal expansionary measures starting from 2008 to reduce the impact of the global financial crisis. These measures had helped global economy to move towards recovery but in turn led to significant increase in the level of public debt and liabilities as percentage of GDP for most of the countries, bringing other risks associated with large public debt. Debt sustainability is in great part a function of the level of debt and fiscal discipline. In the case of India, the gradually declining level of General Government debt over the medium term does answer the sustainability issue positively. The characteristics of existing debt stock (long residual maturity of dated securities, fixed rate of interest, higher proportion of domestic currency denominated Government debt) and economic parameters such as high economic growth rate, high domestic savings rate, put India in a better position when compared to equally or even lower indebted economies. The risk profile of India's Government debt stands out as safe and prudent in terms of accepted parameters of indicator-based approach for debt sustainability analysis (DSA) as detailed in the following paragraphs.

5.1 Institutionally, the Government has decided to setup a statutory Public Debt Management Agency (PDMA) to bring both, India's external and domestic debt under one roof. The first step towards this direction was the establishment of a Public Debt Management Cell (PDMC) within Budget Division, Ministry of Finance in 2016, subsuming the erstwhile Middle Office. Considering the extant legal provisions, the role of PDMC is in advisory capacity for the Central Government debt management operations. The PDMC has since been working in the Budget Division discharging its responsibilities and moving forward towards establishing a PDMA.

Maturity of Debt

5.2 In the absence of information regarding residual maturity on the entire debt stock of the Government, particularly regarding liabilities under Public Account, maturity analysis of debt in

this Chapter is confined to the 'Public Debt' ¹⁶ component of the total liabilities for both, Centre and States.

Short-term Debt

Central Government

5.3 Short-term debt¹⁷ of the Central Government on a residual maturity basis includes 14-day intermediate treasury bills, regular treasury bills, dated securities maturing in the ensuing year and external debt with remaining maturity of less than one year. The short-term debt which had declined noticeably in 2003-04 and 2004-05 rose thereafter with its share in the Public Debt increasing to 13.8 per cent in 2008-09. Since then it has generally been moving in a narrow range with a share of 10.6 per cent of public debt and 4.3 per cent of GDP at end-March 2018 (Table 5.1).

5.4 Treasury bills (other than 14-day ITBs)

Maturity profile is available for marketable debt, external debt and 14-day ITBs, which together account for more than 89.2 per cent of public debt. Of the remaining items, securities issued to NSSF (2.0 per cent of public debt) and securities issued to international financial institutions (1.5 per cent of public debt) are not significant from a roll-over risk perspective. Compensation bonds at 0.7 per cent of public debt, is too low to affect the conclusions.

¹⁷ Short-term debt is defined as debt with maturity of one year or less. Total short-term debt is, thus, the sum of outstanding treasury bills at end-March and repayments of dated securities due in the ensuing financial year.

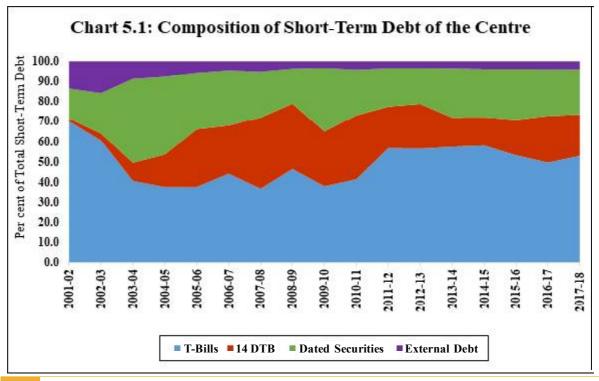

Status of Government Debt

accounted for 52.9 per cent of total short-term debt of Central Government while dated securities constituted 22.4 per cent at end-March 2018. On the other hand, 14 day Intermediate Treasury Bills

(ITBs) and external debt stood at 20.7 per cent and 4.0 per cent of total short term debt respectively. Share of short-term external debt at 4.0 per cent was relatively insignificant (Chart 5.1).

5.5 Issuance of Treasury bills is an integral part of financing short-term mismatches in cash receipts and payments of the Central Government and are being rolled over continuously. At the same time, the yields on Treasury bills serve as benchmarks for pricing of money market instruments and help towards development of money market. Short-term dated securities remained around one per cent of GDP during the

2000s, barring 2009-10 when it had reached 1.7 per cent of GDP due to de-sequestering of MSS securities. However, since then, the share of dated securities with residual maturity of less than one year has declined and remained quite stable in recent years. At end-March 2018, dated securities maturing within a year amounted to 1.0 per cent of GDP, 2.4 per cent of Public Debt, and 3.2 per cent of total outstanding dated securities (Chart 5.2).

State Governments

5.6 Short-term debt of State Governments comprises internal debt including market loans maturing within next one year, WMA and repayment of loans to the Centre due in the ensuing year. It constituted 6.3 per cent of their Public Debt at end-March 2018 (Table 5.2). State Governments do not issue treasury bills. Besides, as market loans constitute the dominant part of Public Debt of State Governments and as States largely issue securities with 10-year maturity¹⁸, the share of short-term debt of States on a residual maturity basis has been relatively low *vis-a-vis* Public Debt of States and GDP.

Source: State Finances: A Study of Budgets, RBI

¹⁸ Since 2012-13, State Governments have been allowed to issue securities with shorter maturities of less than 10 years and also re-issue existing securities.

Status of Government Debt

5.7 Over the years, there has been a shift in the composition of short-term debt of State Governments. A major change is the reduction in WMA¹⁹ from RBI to just 0.5 per cent at end-March 2018 (30.5 per cent of short-term public debt at

end-March 2002). With a gradual decline in the share of loans from the Centre in total liabilities of State Governments, the short-term component in the form of repayment of loans from the Centre (on a residual maturity basis) also declined (**Chart 5.3**).

General Government Debt

5.8 Short-term debt of the General Government²⁰ comprises short-term debt of Central Government and States after netting out inter-Governmental debt such as States' investment in

Centre's Treasury Bills (ITBs and ATBs) and repayment of Central Government loans by States. While it has increased in absolute terms, its share as a percentage of public debt of General Government declined steadily from 2011-12 onwards to 7.3 per cent in 2017-18 (**Table 5.3**).

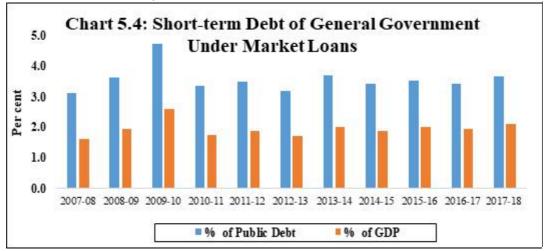

| Table 5.3: Short-term Debt of General Government | | | | | | | |
|--|---------------------|---|-----------------|--|--|--|--|
| Year | Amount (₹ crore) | Per cent of Public Debt of General Government | Per cent of GDP | | | | |

| 2014-15 | 576120 | 8.4 | 4.6 | | | | |
| 2015-16 | 629744 | 8.0 | 4.6 | | | | |
| 2016-17 | 624375 | 7.2 | 4.1 | | | | |
| 2017-18 | 711894 | 7.3 | 4.2 | | | | |

¹⁹ Ways and Means Advances (WMA) is short-term borrowing facility made available by RBI.

²⁰ Inter-governmental debt such as treasury bills held by State Governments and repayments of Central Government Loans by States are netted out.

5.9 Short-term debt under market loans²¹ has remained more or less stable during 2010-11 to 2017-18. At end-March 2018, short-term debt

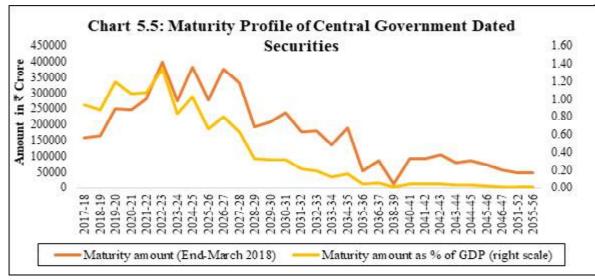

under market loans represented 3.7 per cent of General Government Public Debt and 2.1 per cent of GDP (Chart 5.4).

Annual Repayment Burden of Government of India Dated Securities

The annual repayment burden (ARB) of 5.10 dated securities issued by the Central Government is shown in Chart 5.5 (position as at end-March for later years based on outstanding GoI dated securities as at end-March 2018). An increase in ARB is visible from 2019-20 onwards both in absolute terms as well as relative to estimated GDP. A high ARB may result in roll-over risk to the Government of India (GoI). GoI is aware of this risk and has taken a number of steps to keep ARB under check. Government has been using marketoriented active debt management instruments since 2013-14 in the form of buyback and switching of shorter tenor G-securities with longer tenors Gsecurities, with an objective to spread the

redemption pressure evenly, reduce roll-over risk as well as utilise the surplus cash balances available during the second half of financial year for buy-back operations. During 2017-18, Government carried out buyback of G-securities worth ₹41,555.07 crore and switches worth ₹58,075 crore as against buyback worth ₹64,133.0 crore and switches worth ₹40,510.0 crore, conducted in 2016-17. In the Budget for 2018-19, the Government has proposed switches of Gsecurities worth ₹28,059.0 crore and buyback worth ₹71,941.0 crore, to reduce the roll-over risk. Continuance of this strategy will enable the Government to reduce redemption pressure in the coming years. Elongation of maturity profile of debt portfolio is another strategy being used by the Government to reduce the roll-over risk.

Note: In Chart 5.5, nominal GDP growth rate is taken as 11.5% for 2018-19, 11.8% for 2019-20 and 12.3% for 2020-21 as per MTFP statement of Union Budget 2018-19 and from 2021-22 onwards it has been assumed at uniform rate of 12.3%.

²¹ Includes repayment of market loans in case of Central government as well as repayment of market loans and other items in internal debt, in case of State governments.

Floating Rate Debt

5.11 Government of India debt is predominantly at fixed coupon rate with small percentage being issued at floating rate. State Governments do not issue any floating rate debt. At end-March 2018, outstanding floating rate debt issued domestically by the Central Government amounted to ₹ 1,25,621 crore constituting 1.8 per cent of Public Debt and

0.7 per cent of GDP (**Table 5.4**). A part of external debt is also at floating rates. At end-March 2018, such external debt stood at ₹1,39,984 crore, constituting 2.0 per cent of Public Debt and 0.8 per cent of GDP. Taking both components together, total floating rate debt works out to be 1.5 per cent of GDP at end-March 2018. The share of floating rate debt in Central Government Public Debt was 3.8 per cent at end-March 2018.

| | Table 5.4: Floating Rate Debt of Central Government | | | | | | | | | |

Source: Reserve Bank of India and Aid, Accounts and Audit Division, DEA, MoF

5.12 The low share of floating rate debt insulates the debt portfolio from interest rate risk and imparts stability to the budget. Nevertheless, for development of the Government securities market and given the Government's responsibility to provide investors with a diversified range of credit risk-free instruments, floating rate bonds are being issued. A related instrument is the inflation indexed bond (IIB) which has a fixed real rate of interest but whose nominal interest payments vary with inflation. During 2013-14, the Government had issued IIBs for institutional investors, linked to Wholesale Price Index (WPI), and for retail investors, linked to Consumer Price Index (CPI)

(called Inflation-Indexed National Saving Securities- Cumulative).

Sources of Borrowing – Domestic and External

5.13 As discussed earlier in the chapter on Public Debt, the Government debt in India is raised from a predominantly domestic investor base. The share of external debt has seen a secular decline from 10.8 per cent of General Government Debt at end-March 2002 to 4.2 per cent at end-March 2018. As per cent of GDP, external debt declined from 8.5 per cent to 2.9 per cent over the same period (Chart 5.6). The low share of external debt insulates the debt portfolio of the Government from currency risk.

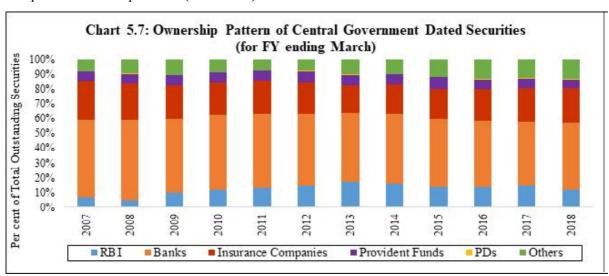

Ownership Pattern

5.14 Historically, commercial banks have been the predominant investor category in Central Government dated securities. Over time, while remaining the largest investor class, their share has declined. At end-March 2018, their share was, however, higher at 42.7 per cent, as compared to 40.5 per cent as at end-March 2017.

5.15 The shares of insurance and provident funds have increased over the years. Over end-March 2001 to end-March 2018, the share of insurance companies have increased from 18.6 per cent to 23.5 per cent and of provident funds from 2.3 per cent to 5.9 per cent (Chart 5.7). Since

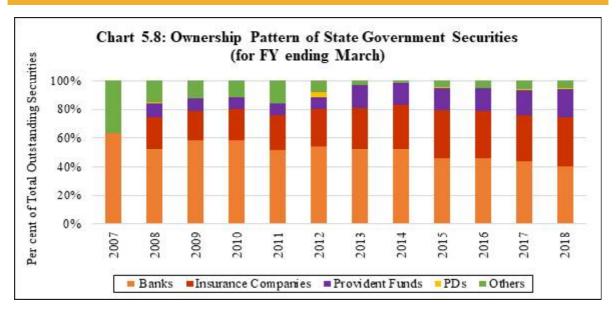

insurance companies and provident funds are longterm investors, a secular increase in their share complements Government's endeavour to lengthen the maturity profile of its debt portfolio without undue pressure on yields, along with diversification of investor base. The share of FPIs in Central Government securities was higher at 4.4 per cent at end-March 2018 (3.5 per cent at end-March 2017). However, the share of RBI holding in Central Government securities declined to 11.6 per cent at end-March 2018, attributable to open market operations (sale) undertaken by RBI during 2017-18.

Source: Handbook of Statistics on Indian Economy; RBI and RBI Bulletin

5.16 The ownership pattern for State Government securities indicates that these securities are largely held by banks even as their share has declined from 63.1 per cent in 2007 to 40.6 per cent in 2018. This is on account of the

fact that the ownership pattern of State Government securities has become more diversified since 2008 with increasing participation of insurance companies and provident funds (Chart 5.8).

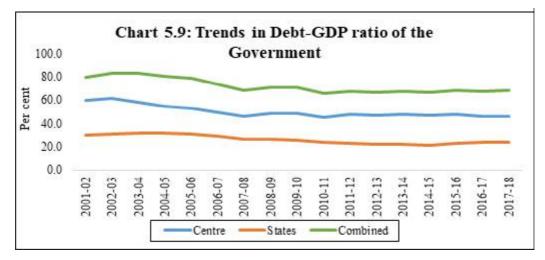

Sustainability Indicators of Debt

Traditionally, debt sustainability is 5.17 assessed in terms of primary deficit and interest cost, relative to nominal GDP growth rate. There is little consensus with regard to a level of debt that may be considered unsustainable. There are countries with debt-GDP ratios close to or higher than 100 per cent without doubt on their ability to service debt while a relatively low debt-GDP ratio can be considered unsustainable for some countries. A secularly rising debt-GDP ratio may nonetheless be considered as leading towards unsustainability and vice versa. In this chapter, an assessment of sustainability of Government debt, based on an indicator-based DSA approach, is made using trends observed in critical variables.

Debt-GDP ratio

5.18 The trend in level of debt is the first such indicator which points toward long and mediumterm sustainability of the Government debt in India. The level of debt reflects the cumulative effect of

Government borrowings over time, which tends to be higher for a developing economy due to the need for creating adequate infrastructure and limited revenues. The trend in General Government Debt (GGD) to GDP ratio has been depicted in Chart 5.9. India's debt level went up consistently during 1980s and 1990s and the combined debt-GDP ratio of the Centre and States reached a peak of 83.3 per cent by the end of 2003-04. Thereafter, the debt-GDP ratio has shown a broadly declining trend. The marginal increase during 2008-09 to 2011-12 was mainly on account of global factors and the increase was significantly lower than what many other countries had witnessed during that turbulent period. Reduction in debt-GDP ratio took place at the level of both Centre and States. The debt to GDP ratio for the Central Government declined from 58.4 per cent in 2003-04 to 46.5 per cent in 2017-18. Similarly for States, debt to GDP ratio declined from 31.8 per cent in 2003-04 to 24.0 per cent in 2017-18. GGD to GDP ratio stood at 68.2 per cent at end-March 2018.

5.19 With commitment shown by both Central and State Governments, the debt-GDP ratio is likely to continue to trend downwards in the years ahead. The estimates for debt-GDP ratio up to

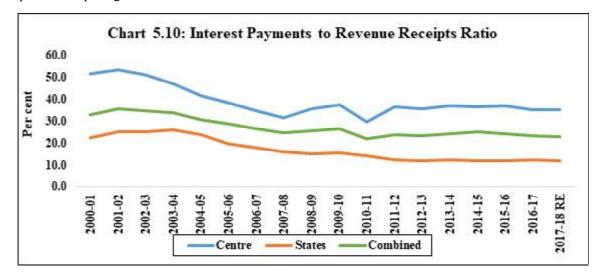

2020-21 for the Central Government, provided in the Medium Term Fiscal Policy Statement (MTFP), underscore the commitment to sustainable debt trajectory (**Table 5.5**).

| Table 5.5: Debt-GDP Ratio (per cent) of the Centre | | | | | | | | |
|--|---------|---------|---------|----------|--|--|--|--|
| Estimates | 2017-18 | 2018-19 | 2019-20 | 2020-21 | | | | |
| | RE | BE | Pro | jections | | | | |
| MTFP | 50.1 | 48.8 | 46.7 | 44.6 | | | | |

Interest Payments to Revenue Receipts

5.20 The interest cost of debt is another crucial indicator of the sustainability of Government debt. The ratio of interest payments to revenue receipts (IP-RR) shows a secular decline for both the Central and State Governments (**Chart 5.10**), notwithstanding the higher levels during 2011-12 to 2015-16 due to increased borrowing requirements post-global financial crisis of 2008.

5.21 Centre's IP-RR ratio was placed at 35.3 per cent in 2017-18, significantly lower than 53.4 per cent in 2001-02. Similarly, States' IP/RR ratio has secularly declined to 11.9 per cent in 2017-18 from 25.1 per cent in 2001-02. Combined IP-RR ratio of Centre and States in 2017-18 was placed at 22.7 per cent as compared to 35.6 per cent in 2001-02.

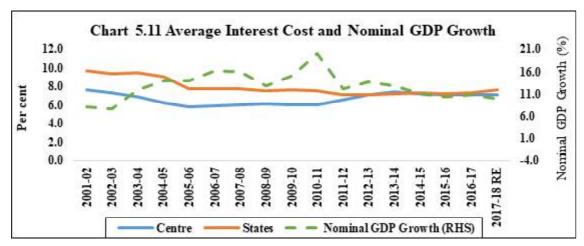

Average Interest Cost

5.22 Average interest cost (AIC) is arrived at by dividing interest payments during a year with average debt stock²². A continuously declining average interest cost augurs well for the stability of Government debt. Trend in average interest cost of both the Centre and States showed a downward movement since 2000. Centre's AIC declined to 7.2 per cent in 2017-18 from 7.7 per cent in 2001-02, while States' AIC declined to 7.7 per cent from 9.7 per cent over the same period (Chart 5.11).

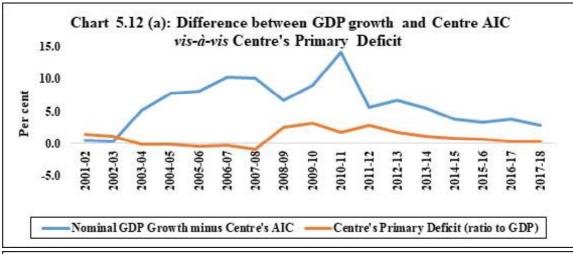

5.23 A comparison of AIC with nominal GDP growth rate reinforces the sustainability of Central Government debt. Nominal growth rate of GDP has been well above the average interest cost, implying that the growth in revenue generation through higher GDP is likely to exceed the growth in interest obligations. This is likely to further push down the IP/RR ratio providing more fiscal space for other expenditures of the Central government.

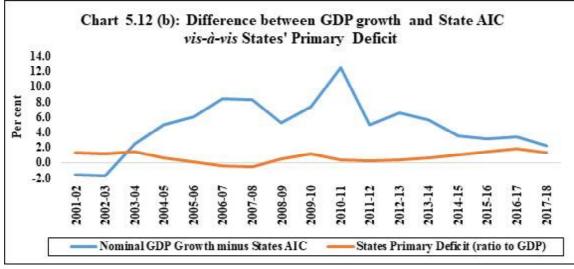

²² Average debt stock is a simple average of outstanding debt at the beginning and at the end of the year.

5.24 Similarly, a comparison between the difference in the average interest cost and nominal GDP growth *vis-a-vis* the primary deficit (as a ratio

of the nominal GDP) over the same period also supports the sustainability of Centre's Debt (**Chart 5.12**).

5.25 To sum up, Government's debt portfolio is characterised by favourable sustainability indicators. The share of short-term debt is within safe limits and has stabilised after some rise during 2005 to 2012. Most of the Government debt is at fixed interest rates which minimises the impact of interest rate volatility on the budget. Debt is mostly

of domestic origin implying that currency risk and the likely impact of volatile international capital markets on the debt portfolio is insignificant. Conventional indicators of debt sustainability, *viz.*, debt-GDP ratio and cost of debt, indicate that debt profile of Government is within sustainable limits, and consistently improving.

Part II

Debt Management Strategy of Central Government

Objectives and Scope of Debt Management Strategy

Introduction

Public debt management plays an important role in macro-economic policy of a country. It essays a significant role in easing financing constraint for a capital scarce country as lack of capital could impede implementation of development plans. Productive use of public debt contributes to economic growth and welfare of society at large. At the same time, public debt because of its size, if not managed well, could become a source of financial instability. Thus, establishing and executing a strategy for managing Government's debt in order to raise the required amount of funds at low cost over the medium to long run, consistent with a prudent degree of risk is essential.

2. Medium-Term Debt Management Strategy (MTDS) is a plan that the Government intends to implement over the medium term (three to five years) in order to achieve a composition of the Government debt portfolio that captures the Government's preferences with regard to the costrisk trade-off. The risks include refinancing/ rollover risk, market risk, currency risk, credit concentration risk, commodity price risk, etc. MTDS provides a framework within which the debt management authorities can make informed choices on how the Government's financing requirements should be met, while taking due account of constraints and potential risks. MTDS comprising of objectives, various benchmarks and portfolio indicators along with issuance plan and alternate borrowing strategies provide requisite direction to the debt management operations. Its

articulation imparts information, transparency and certainty and enables investors to plan their investments.

3. In emerging market and developing economies (EMDEs), the Government is generally the largest borrower in its currency and remains continuously in the market. Therefore, it needs to avoid any opportunistic and time inconsistent strategy that may succeed in lowering the cost of borrowings in the short run but may end up increasing the cost of borrowings in the long-run. The transparency in Government's market borrowing operations is an important factor that determines its cost of borrowing and hence, maintaining continuous communication with the market becomes critical. The strategy also focuses on appropriate consultative process among debt management, monetary, fiscal, and financial regulatory authorities to facilitate proper functioning of public debt market.

Objectives of Debt Management Strategy

4. Debt Management Strategy seeks to ensure that debt levels remain sustainable, debt structure remains stable and contributes to broader objective of financial stability. The main objective of the Government debt management policy is to raise funds for the Government at low cost while keeping the risks at prudent levels and also support development of a well-functioning, vibrant, deep and liquid domestic bond market which helps in pricing the Government debt efficiently. These objectives are / may be modulated so as to maintain

²³ International Monetary Fund and The World Bank; Developing a Medium-Term Debt Management Strategy (MTDS)- Guidance Note for Country Authorities.

Debt Management Strategy of Central Government

consistency with other macro-economic policies, including monetary policy.

Indian approach

- 5. Prior to the maiden release of DMS on December 31, 2015, India's debt management strategy used to be articulated and disclosed in Reserve Bank's Annual Report and in the Status Paper on Government Debt, released by the Ministry of Finance. In line with international sound practices, DMS for Indian economy was prepared for a period of three years, i.e. 2015-16 to 2017-18 and it was delineated that it will be reviewed annually and its projections will be carried forward on a rolling basis for the ensuing three years. The present document updates the DMS and projections have been carried forward on a rolling basis for the ensuing three years i.e. 2018-19 to 2020-21.
- 6. The organisation of DMS document is as follows: Chapter II provides details of various risks associated with debt portfolio and Chapter III

consists of measures taken to contain these risks and MTDS for 2018-19 to 2020-21, keeping in view the risks associated and measures proposed to contain these risks. Chapter III also provides status of compliance to DMS. Scenario analysis is provided in the Appendix.

Scope of DMS

7. About 93 percent of outstanding public debt of the Government of India is domestic and within this, a very large part consists of marketable debt. Accordingly, major focus of DMS is on active element of domestic debt of the Central Government, i.e., marketable debt. Government Small Savings Schemes, which have started playing a major role in financing a significant portion of borrowing requirements of Government, are also now covered under DMS. Although sovereign external debt is primarily negotiated bilateral and multilateral debt, certain aspects, such as tenure, currency of loan, repayment terms, etc. of external loans are also brought under the scope of DMS so as to borrow at the best possible terms.

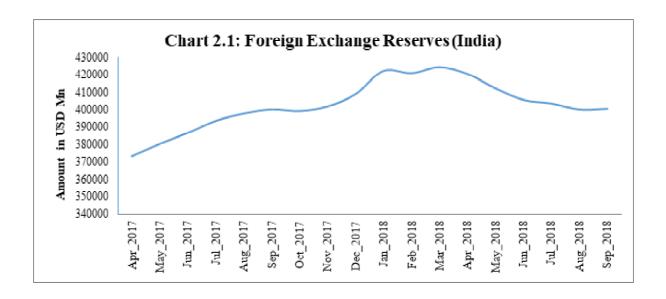

Risk Assessment of Public Debt Profile of Central Government Macroeconomic Environment

The World Economic Outlook by IMF in April 2018 projected a global growth of 3.9 per cent for 2018 and 2019 but the expansion is becoming less even and risks to the outlook are mounting. Owing to growing uncertainties, coming from rising trade tensions and reversal of capital flows to emerging market economies, the global growth projection has been lowered to 3.7 per cent in October 2018. IMF forecasts that about 45 emerging market and developing economies (constituting 10 percent of world GDP in purchasing-power-parity terms) are projected to slow down than advanced economies during 2018-23. The trade war started by USA with China, Canada, Europe, etc. is going to have an adverse impact on global growth.

- 2. Global investments recorded the highest increase for advanced economies in 2017 since the beginning of the decade. This trend is about to experience a change in 2018 and 2019 with modest growth in investments in the medium term. In fact following the rising trade worries, it would mean reduced capital spending and hence lower investments. In contrast, the projection of investment growth for emerging market economies will remain strong over the medium term despite a mild weaker projection for 2018-19.
- 3. In 2018, higher inflation rate as well as pressure on currency has signalled for higher policy rates across the world. Among the advanced economies, sharp improvement in GDP growth rate of USA for the quarter ended June 2018 (4.1% vs. 2.80% in March 2018) strengthened the case for gradual rate hikes and end of easy monetary policy. US Federal Reserve signalled two additional rate hikes in 2018 and three in 2019, in line with the market expectations. Both, the Bank of England and the

Bank of Canada raised the policy rates in 2018. In Japan, the Central Bank has allowed wider deviation on the 10 year benchmark yield without any change in the policy rate. Among emerging market economies such as China, Central Banks lowered the reserve requirements in order to support lending. Central Banks in India, Indonesia, Mexico and Philippines have raised the policy rates mid-year in 2018.

- 4. Amidst the global imbalances, India continued to maintain strong growth fuelled by domestic demand. As per Central Statistics Office (CSO), the GDP growth rate in 2017-18 stood at 6.6 per cent in comparison to 7.1 per cent in 2016-17. The growth rate improved to 7.7 per cent in Q4 of 2017-18 and climbed to a record high of 8.2 per cent in Q1 of 2018-19. Retail inflation excluding food and fuel remained above 5.0 per cent at the beginning of 2018 after increasing from June 2017. It gradually declined to 4.6 per cent in April and then to 3.7 per cent in August 2018.
- 5. Rupee has weakened against the US Dollar and touched a life time low of ₹74.39 per USD in October 2018, a decrease of 14.14 per cent since beginning of the year (₹63.87/USD in Jan 2018), main reasons being the rise in crude prices and rise in treasury yields in US.
- 6. India's international trade deficit in July 2018 was recorded at \$18 billion which is over 5 year high raising concerns on depletion of forex reserves on external front and Rupee depreciation on domestic front. The forex reserves, which touched an all-time high of over \$424 billion in April 2018, fell subsequently to \$393.13 billion by November 2, 2018 (Chart 2.1):

Central Government Liability Profile

7. Central Government's Public Debt profile and other liabilities have been elaborated in Chapters 1 and 2 of the Status Paper. Public debt increased by 11.9 per cent in 2017-18 (Table 2.1). It can be

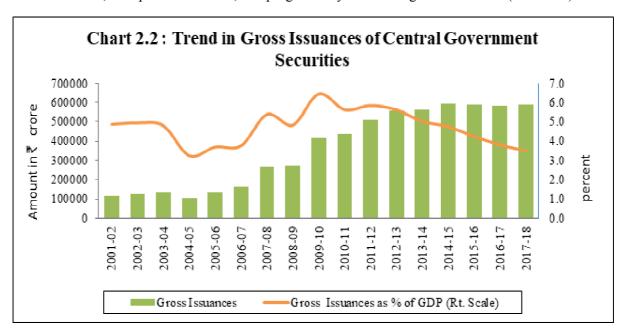

seen that nearly 93 per cent of the Government's public debt is internal reflecting stable and adequate domestic sources of financing. Around 86 per cent of the internal debt is marketable, representing borrowings at market-determined cost.

Table 2.1: Debt Position of the Central Government
(in ₹ crore)

| Marketable Debt to Public Debt ratio | 80.5 | 82.0 | 83.5 | 84.4 | 82.8 | 82.1 | 80.0 |
| External Debt as % of GDP | 3.7 | 3.3 | 3.3 | 2.9 | 3.0 | 2.7 | 2.9 |

²⁴ The external debt figures at current exchange rates are taken from Aid, Accounts and Audit Division, Ministry of Finance and includes SDR allocation by IMF.

8. Notwithstanding growing issuance size of dated securities, gross issuance of Central Government dated securities, as a per cent of GDP, has progressively been falling since 2011-12 (Chart 2.1).

External Debt

9. Soverign External Debt constituted 7.0 per cent of the Public Debt of the Central Government at end-March 2018. Most of the External Debt is from multilateral agencies (such as IDA, IBRD, ADB, etc.) and the balance is from official bilateral sources. Currency composition and other details of external debt of Government of India have been elaborated in Chapter 2 of the Status Paper.

Cost of Borrowings

10. The weighted average coupon on outstanding stock of dated securities has remained broadly stable in the range of 7.81 - 8.23 per cent in the last 10 years and was at 7.85 per cent at end-March 2018. The ratio of interest payments (IPs) to revenue receipts (RRs) has also shown a secular decline. The Centre's IP/ RR ratio was placed at 35.3 per cent during 2017-18 as compared to 53.4 per cent during 2001-02.

11. It is the endeavour of the debt manager to reduce cost over the medium to long-term as cost minimization attempted through issuance of short-term securities may create sub-optimal debt structure including elevated refinancing risks. Steps taken to lower cost of borrowings include transparent issuance mechanism and offer of

appropriate mix of instruments to cater to investors' preferences. In line with the international best practice, transparency and predictability in borrowing plans, issuance calendar for market borrowings with details of the quantum to be borrowed each week, maturity buckets, etc. is announced in advance for each half year; it ensures cost effectiveness by giving enough time to market players to plan their investments. Implications of large amounts becoming due for redemption on a single day and also in a year are also kept in view while planning the issuances. These limits are reviewed on an ongoing basis. To prevent any interest rate arbitrage in different maturity buckets, the Government has started to exercise Green Shoe option.

Risk Analysis of Central Government Debt

12. The sovereign debt portfolio is exposed to rollover risk, interest rate risk, creditor-concentration risk and currency/exchange rate risk, which needs to be identified, analysed and managed.

Roll-over Risk

13. The roll-over risk mainly encompasses the possibility of rolling over debt at relatively high cost and in extreme circumstances, failure to roll-over debt completely/partially. The roll-over risk

Debt Management Strategy of Central Government

becomes critical when market conditions are fragile and large amounts are to be rolled over. Indicators such as increasing share of short-term debt to the total debt reflect the rise in roll-over risk.

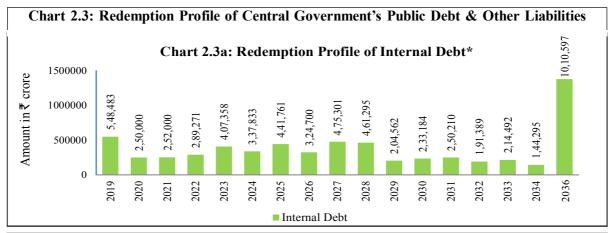

14. In India, the roll-over risk is managed by elongating maturity, limiting short-term debt issuances and placing limits on issuances under an individual security as well as all securities maturing in a year. Such limits are periodically reviewed keeping in view the macroeconomic environment, variations in cash inflows and cash

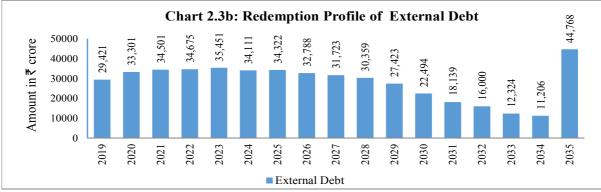

management considerations of the Government.

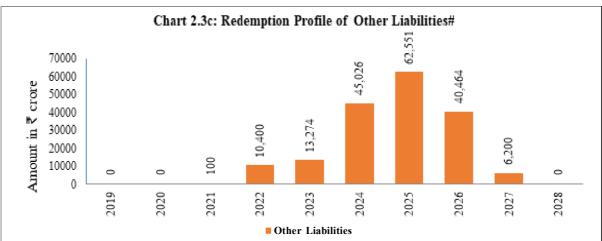

15. The roll-over risk could be gauged by analysing metrics such as redemption profile, residual maturity and average time to maturity.

Redemption Profile

16. Redemption profile of the Central Government's public debt and other liabilities reveals that redemptions are at elevated level, in nominal value, in less than 10 years' maturity buckets (Annex V of the report and Chart 2.3).

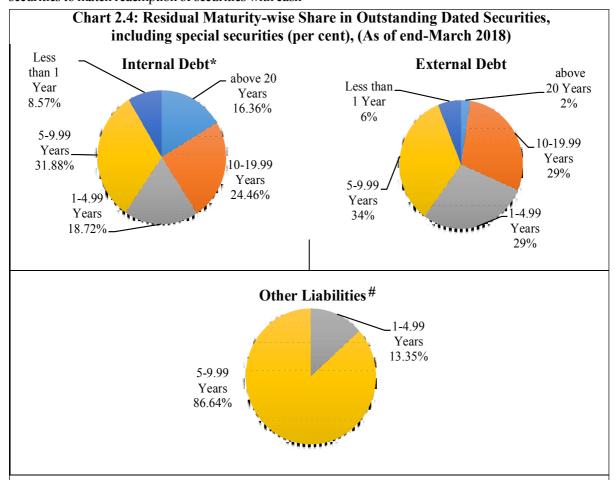

*Including Dated securities, T-Bills (₹3,85,283 crore due for redemption during 2018-19), SGBs & Non-Marketable Debt (excluding compensation bonds, Securities issued to IFIs and a part of securities issued to NSSF)
Outstanding amount of Special Securities issued in lieu of Subsidies to PSUs (FCI, OMC and Fertiliser Companies).
Chart 2.2c does not contain data regarding NSSF, SPF, Other Accounts and Reserve Funds and Deposits.

17. Maturity profile of the outstanding central government dated securities are detailed in para 2.9 and table 2.4 of part I of the Status Report. Outstanding dated securities continued to be concentrated in 5-9.99 years' bucket, which at end of March 2018 [maturities 2018-19 onwards] constituted 31.88 per cent of total outstanding stock of dated securities (including Special Securities) portfolio. However, Government and RBI have made concerted efforts towards elongation of maturity profile by issuing longer tenor papers, issuing non-standard securities to match redemption of securities with cash

flows, etc. Securities maturing in 1-9.99 years' maturity buckets constituted 59.18 per cent of the total portfolio as at end-March 2018 as compared with 57.23 per cent as at end-March 2017.

18. As a result of the strategy of elongating the maturity profile of outstanding debt, the share of 10-20 years' maturity bucket has increased from 21.42 per cent in 2011 to 24.46 per cent in 2018. During 2015-16, the objective of elongation of maturity got a fillip when the Government of India issued forty-year tenor security for the first time.

*Including Dated securities, T-Bills, SGB & Non Marketable Debt (excluding compensation bonds, IFIs and a small portion of securities issued to NSSF)

Outstanding amount of Special Securities issued in lieu of subsidies to PSUs (FCI, OMC and Fertiliser Companies). Chart does not contain data regarding NSSF, SPF, Other Accounts and Reserve Funds and Deposits.

19. High concentration of outstanding debt in less than 10 years' maturity bucket can be attributed to: (i) large issuance of short-term securities during the crisis period (2008-10) when market conditions turned fragile and demand for long-term securities dwindled significantly; (ii) a major part of the market borrowing programme being completed through issuance of 10 years' security over the years as this

maturity point is the most liquid point on the yield curve, and (iii) less appetite in the market for longer term securities. In the year 2018-19, issuances under longer maturity buckets have been increased further to elongate the maturity profile.

20. Residual maturity analysis of marketable debt under internal debt shows that the share of short-term

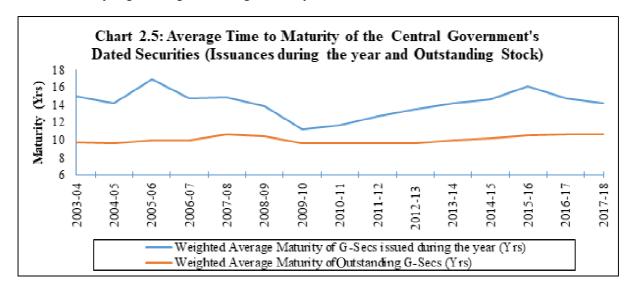

Debt Management Strategy of Central Government

debt (less than 1 year) in Government of India's outstanding dated securities (including TBs) is at 9.95 per cent as at end-March 2018. At the same time, the share of securities maturing between 1-5 years in total outstanding dated securities has fallen from about 26 per cent as at end-March 2011 to about 22.98 per cent as at end-March 2018, reflecting the efforts taken with regard to elongation of the maturity profile of securities.

Weighted Average Maturity/Average Time to Maturity

21. A relatively higher weighted average maturity

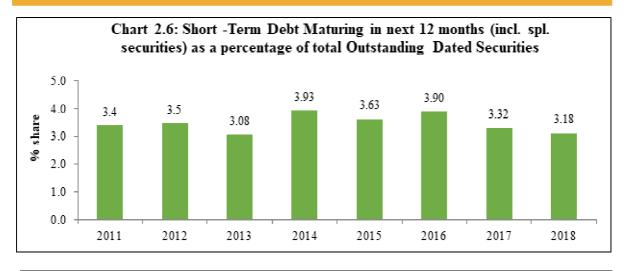

(WAM) of debt [also referred to as average time to maturity (ATM)] implies a lower share of debt rolled over in a year. Elongation of maturity of the debt portfolio coupled with issuances across the yield curve is a preferred strategy to limit roll-over risk which has been followed since 2010-11. The WAM of outstanding stock of dated securities of the Central Government has been hovering around 10 years (Chart 2.5) indicating low/very modest roll-over risk. The WAM of fresh issuances during 2017-18 fell to 14.13 years from 14.76 years in 2016-17.

22. International comparison shows that India is among the group of countries having high ATM of domestic debt. For instance, among major developed and EMDEs²⁵, only UK had longer ATM at 14.90 years than India (10.65 years) in 2017. The ATM of external debt of India was also on the higher side at 15.30 years. Many other countries have ATM of external debt at more than 10 years (Brazil 20.74 years). Broadly it is observed that developed countries have shorter ATM for both domestic and external debt even as they have exhibited a tendency to raise funds through issuance of ultra-long sovereign bonds in the recent period.

23. Thus, it may be concluded that the average time to maturity (ATM) has remained close to 10-11 years suggesting that the roll-over risk does not pose a challenge. However, the analysis of the redemption profile and residual maturity shows increased concentration in less than 10 years' maturity buckets. Going forward, this could create some stress in terms of cost of funds. The concentration risk may be addressed through switches in a phased manner replacing the securities in the near term with long term securities and buy-back of securities maturing in near term, which is being done presently.

^{*}Excluding Suspense.

Share of Short-term Debt

- 24. The percentage share of short-term debt²⁶ in outstanding dated securities decreased to 3.18 per cent at end-March 2018 from 3.32 per cent at end-March 2017 (Chart 2.6).
- 25. With the inclusion of T-Bills [i.e. the short-term securities (91D/ 182D/ 364D TBs)], the percentage of total debt maturing in the next 12 months stands at 9.95 per cent in 2017-18. (Table 2.2). The share of short-term debt to total debt is not high and poses low roll-over risk.

Market Risks

26. Market risks are generally associated with movements in interest rates and exchange rates,

which impact debt servicing costs. Market risks related to outstanding debt of the Central Government have been analysed with respect to interest rate changes and cost of market borrowings through indicators such as fixed to floating rate debt ratio, average-time to re-fixing, percentage of debt maturing in next 12 months and percentage of re-fixing in next 12 months.

27. Fixed-Floating Rate Debt Ratio: Floating rate bonds are issued to meet the demand of banks for duration management. However, these bonds carry interest rate risks on re-fixing. In India, though a variety of instruments, such as, fixed rate conventional bonds, Floating Rate Bonds, Inflation Indexed Bonds have been issued, the contribution

²⁶ Short-term debt is defined as the debt maturing in next 12 months.

Debt Management Strategy of Central Government

of linkers (FRBs and IIBs) has remained small. Floating rate debt constituted only 2.46 per cent of outstanding dated securities at end-March, 2018,

thereby limiting interest rate risk in the debt portfolio (Table 2.3).

| Table 2.3: Market borrowings through Floating Rate Instruments | | | | | | | | |
|--|--------------|---------------|-------|--|--|--|--|--|
| (₹crore) | | | | | | | | |

| 2017-18 | 5,88,000 | 67,235* | 0 | | | | | |

^{*}Including Switches

Average Time to Re-fixing (ATR)

28. The average time to re-fixing is a measure of weighted average time until which all the principal payments in the debt portfolio of a country become subject to a new interest rate. ATR indicates the exposure of outstanding portfolio to interest rate changes. The ATR of the Central Government's market debt increased from 9.95 years as at end-March 2014 to 10.48 years as at end-March 2018, indicating moderation in interest rate risk.

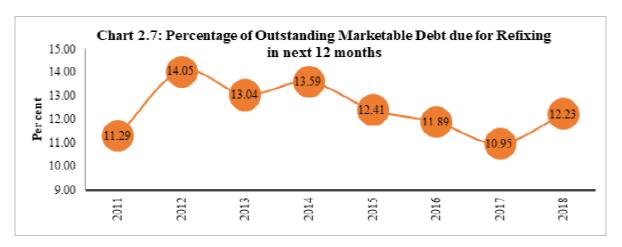

Percentage of outstanding debt due for re-fixing

29. Another measure of interest rate risk is the share of debt maturing in the next 12 months as percentage of outstanding debt. As mentioned earlier, the percentage of outstanding dated securities maturing in next 12 months has remained

broadly stable at low levels. This indicates that the magnitude of debt that needs to be re-financed at current interest rates is low. This indicator is further expanded by including the FRBs and IIBs in the maturity amount to compute the percentage of outstanding debt due for re-fixing in the next 12 months. The percentage of outstanding dated securities (including special securities) due for re-fixing in next 12 months has come down from 5.38 per cent at end-March 2011 to 5.24 per cent at end-March 2018.

30. With the inclusion of treasury bills, the percentage of outstanding debt (including special securities and Treasury Bills) exposed to the interest rate risk has decreased from 14.05 per cent as at end-March 2012 to 12.23 per cent as at end-March 2018 (Table 2.4 and Chart 2.7).

| Table 2.4: Percentage of Outstanding Debt due for Re-fixing in next 12 Months | | | | | | | | |
|---|---|-------------------------|--|--|--|--|--|--|
| Year | Securities due for re-fixing (dated Sec+ FRBs +IIBs+ special Securities) (Amount in ₹Crore) | Dated Securities | Securities due for re-fixing (including T-Bills) (Amount in ₹Crore) | As per cent of total Outstanding Marketable Debt | | | | |
| 1 | 2 | 3 | 4 | 5 | | | | |
| 2010-11 | 122931 | 5.38 | 257800 | 11.29 | | | | |
| 2011-12 | 134971 | 4.72 | 402006 | 14.05 | | | | |
| 2012-13 | 138359 | 4.12 | 438164 | 13.04 | | | | |
| 2013-14 | 184645 | 4.79 | 523779 | 13.59 | | | | |
| 2014-15 | 185216 | 4.30 | 534667 | 12.41 | | | | |
| 2015-16 | 197458 | 4.18 | 562153 | 11.89 | | | | |
| 2016-17 | 217992 | 4.32 | 552794 | 10.95 | | | | |
| 2017-18 | 288821 | 5.24 | 674104 | 12.23 | | | | |

Creditor-Concentration Risk

31. An important feature of investor profile of the G-Sec market is the dominance of domestic investors and limited foreign investor participation. The ability of domestic market to finance government operations is a source of strength of the debt portfolio, which also insulates it from the currency risk. The Debt Management Strategy framework is geared towards continued issuance of debt to domestic investors while focusing on widening of the investor base. Investment limits for the Foreign Portfolio Investors (FPIs) have been enhanced in a phased manner to ₹3.16 lakh crore in G-Secs and ₹0.45 lakh crore for SDLs (all Govt. debt at ₹3.61 lakh crore) (applicable till March 2019) in a 2-step hike for H1 and H2 of 2018-19.

RBI further liberalised the operational guidelines relating to FPI investment on April 27, 2018 and May 1, 2018; the details of which are given in Box 2.2, Chapter II, part I of the Status Paper.

32. Ownership pattern of Government of India dated securities has been discussed in detail in the main report (para 2.14 and 5.14-17). The domestic investor base is dominated by commercial banks in short to medium-tenor securities and by insurance companies and provident funds at the longer-end. However, the share of commercial banks has been declining over the years. With the entry of mutual funds, co-operative banks, regional rural banks, non-banking finance companies, pension funds, the institutional investor base has got diversified reasonably. Mutual funds prefer

Debt Management Strategy of Central Government

short-term and liquid securities, co-operative banks prefer short to medium term securities while pension and provident funds prefer longer tenor securities due to longer time horizon of their liabilities.

33. For further diversification of the investor base, especially in the context of calibrated reduction in mandated investments in the form of Statutory Liquidity Ratio (SLR), efforts to improve demand from new investors such as, pension funds and retail investors are being undertaken. Several steps have been taken to promote retail participation such as, enabling non-competitive bidding (5 per cent of notified amount for G-Secs and T-Bills, 10 per cent in SDLs) in primary auctions to enable noninstitutional investors to participate in these auctions, introduction of odd lot trading, improving trading of G-Secs on stock exchanges; mandating retail / mid-segment targets for primary dealers, enabling web-based trading access to gilt account holders, etc. The process of developing the retail and mid-segment investor base will be continued to maintain stable demand for G-Secs from varied investor groups so that investor base is wide and is not impacted due to loss of demand from any particular segment.

Currency/Foreign Exchange Risk

34. Currency/ Foreign exchange risk relates to vulnerability of the debt portfolio to depreciation in the value of the domestic currency vis-à-vis the currency of denomination in external loans and the associated increase in the Government's debt servicing cost. Achieving appropriate and stable

mix of domestic and foreign currency debt in portfolio is desirable for stability of debt portfolio. Raising debt in foreign currency could be costeffective (subject to fulfilment of some conditions like stability/appreciation of Rupee against currency/currencies of debt, stability of interest rate regime in host markets, etc.) and provide a wide and varied investor base. A country with large foreign currency denominated liabilities is, however, exposed to currency/exchange rate risks, which could impact macroeconomic stability. Further, the dependence on foreign currency debt could mean sharp volatility in interest rate and market volumes linked to the uncertainty of external events. As a conscious strategy, sovereign external debt (denominated in foreign currency) is kept very low in India and its share in Central Government's public debt has come down from around 9.1 per cent of public debt in 2011-12 to 7.0 per cent during 2017-18 (Table 2.1). The sovereign external debt in the Indian context is entirely from multilateral and bilateral sources and is largely on concessional terms.

Commodity / Price Risk

35. Since November 2015, the Government has been issuing Sovereign Gold Bonds (SGBs) to divert the demand from physical gold to paper/digital gold in the country. These bonds are issued to the investors at the average closing price of last week as published by India Bullion and Jewellers Association (IBJA) (changed to that of last 3 trading days since October 2017). SGBs are redeemable after 8 years at the then prevailing gold rate. These bonds can also be redeemed after 5th

²⁷ Transactions of any value other than the standard market lot size of ₹5 crore are referred to as odd lot. Generally the value is less than the ₹5 crore with a minimum of ₹10,000/-. Odd lot transactions are generally done by the retail and small participants in the market.

²⁸ Retail category of investors are generally defined as Individuals, Hindu Undivided Family (HUF), Charitable Institutions registered under Section 25 of the Indian Companies Act and Universities incorporated by Central, State or Provincial Act or declared to be a university under Section 3 of the University Grants Commission Act, 1956 (3 of 1956).

²⁹ Mid-segment category of investors are generally defined as firms, companies, corporate bodies, institutions, provident funds, trusts, RRBs, co-operative banks and any other entity as may be specified by RBI.

Risk Assessment of Public Debt Profile of Central Government

year at the option of the holder. Thus, SGBs are prone to market risk as the liability of the Government is linked to the prevailing price of gold at the time of redemption. Government has issued SGBs worth ₹ 6,661.42 crore (22.88 Tonnes) till March 2018. The year-wise collections under SGBs are detailed below in Table 2.5.

| Table 2.5: Issuance of Sovereign Gold Bonds | | | | | |
|---|----------|-----------|--|--|--|
| Year Amount (₹ Crore) Quantity in Kg. | | | | | |
| 2015-16 | 1,318.13 | 4,905.50 | | | |
| 2016-17 | 3,470.39 | 11,449.14 | | | |
| 2017-18 1,872.90 6,524.93 | | | | | |
| Grand Total | 6,661.42 | 22,879.57 | | | |

36. Interest is payable on the face value of the bonds at 2.75 per cent on SGBs issued in 2015-16 and at 2.5 per cent on the SGBs issued in subsequent years. It may not be possible to quantify the price risk linked to issuance of these bonds; it is not possible to estimate the market rate that will be prevailing at the time of redemption. To take care of the commodity price risk to certain extent, a Gold Reserve Fund has been created wherein an amount equal to the difference in interest rate on SGBs and

weighted average interest rate of dated securities issued during the relevant year, is transferred.

37. To sum up, risk analysis reveals that the public debt structure of the country is placed prudently on various risk parameters. Investor base is stable and well-diversified. To continue with the low risk debt structure and to attain the debt management objectives of low cost and prudent level of risk, the MTDS needs to be adopted, which is detailed in the next chapter.

Medium Term Debt Management Strategy [2018-21]

In the backdrop of a low risk structure of the public debt portfolio with reasonable borrowing cost, MTDS will continue the strategy being followed hitherto, for maintaining low risk and stable debt structure while ensuring that Government of India's financing needs are appropriately met in the years to come. Given the importance of developed G-securities market for ensuring the above objectives, development of the G-securities market will continue to be an important strategic objective in medium term. Debt management strategy would be based on three broad pillars viz., low cost of borrowing, risk mitigation and market development.

2. As regards debt strategy for next three years i.e. 2018-19 to 2020-21, it is assumed that economy will record reasonably strong growth (7.40 per cent for 2019 as per IMF World Economic Outlook-Oct 2018); a moderate level of inflation as per the path mandated for Reserve Bank of India (4 per cent ±2 per cent) and financial stability will continue. Notwithstanding global uncertainties, Indian economy is expected to remain resilient due to favourable domestic macroeconomic factors backed by broadly stable and higher growth (India is among top 3 fastest growing economies) with low inflation. It is also assumed that the process of fiscal prudence and debt consolidation will continue in the wake of the Central Government's adherence to the roadmap under the Medium Term Fiscal Policy Statement for 2018-19 to 2020-21. Scenario analysis about the projected debt structure in the medium-term as per baseline scenario is presented in the Appendix along with results of stress test on the baseline scenario.

Raising Debt at Low Cost

3. Reduction in cost of debt is sought to be achieved over medium to long run by formulating an appropriate issuance strategy while developing the Government securities market. Borrowing requirements for the year are estimated and distributed over different segments of maturity buckets depending upon the portfolio structuring needs and market appetite, and are notified through an advance borrowing calendar for each half of the fiscal year (H1 and H2). Borrowings are generally made as per the notified calendar thereby reducing uncertainty for the market. Proper demand estimation in different segments, planned issuances and offer of appropriate instruments would aid in lowering costs.

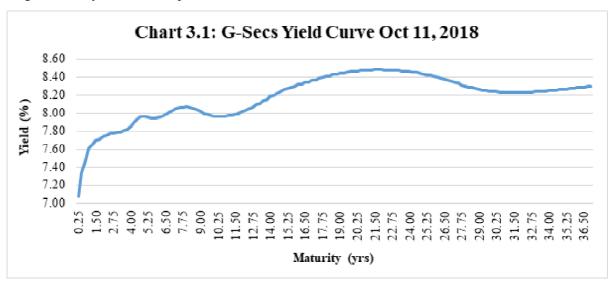

- 4. In India, the issuance calendar for market borrowings is announced in advance for H1 and H2 of the fiscal year which provides details of the quantum to be borrowed each week, maturity buckets and total borrowings for the given period, etc. Around four days prior to the auction, individual securities along with their issuance size are notified to public (generally on Monday after trading hours for auction on coming Friday). This strategy of sharing information about market borrowings has enhanced transparency of debt management operations and ensured successful completion of borrowings in non-disruptive manner and at a reasonable cost. This practice will be continued.
- 5. In order to meet the varied demand of different segments of investors, market borrowings are planned keeping in view the investment preferences/ horizons of various investors. Although the share of commercial banks has declined in recent years (from 47 per cent in 2009 to 42.7 per cent at end-March 2018), they remain predominant investors in G-Secs and are interested in short/medium tenor bonds, substantial issuances are therefore made in these tenors. Longer tenor bonds are issued keeping in view the demand from insurance companies, Pension Funds and Provident Funds. Recognizing the need for an appropriate structure of debt portfolio

Debt Management Strategy of Central Government

and to mitigate roll-over risk, the issuance of securities maturing in less than 10 years was significantly moderated in the past. However, in view of demand for 2-year benchmark security, issuance under short-term buckets has gone up in the year 2018-19 which would continue. This will lead to roll-over risk but increased issuances under longest maturity bucket are expected to balance this

risk and work towards the objective of elongation of maturity. The strategy to elongate maturity will also take into account the shape of the yield curve and the Government would modulate the issuances based on cost-risk trade-off and changes in yield curve (Chart 3.1).

6. Investor Relations: Investor relations assume

critical importance in the successful completion of market borrowing programme. The emphasis on investor relations for policy transparency and ensuring proactive dialogue between sovereign debt issuers and investors is a fundamental prerequisite for a sound debt management architecture. Regular proactive investor meetings (primary dealers and other institutional investors) and market consultations have enabled the Government and Reserve Bank of India to understand ground realities and communicate better with the investors. address their concerns, while also obtaining valuable inputs for the sovereign debt management. This has made it possible for investors to become better informed about the Government's debt management strategy. This consultative process and proactive investor relations would continue during the MTDS period.

7. Risk Mitigation: The debt portfolio, which is exposed to roll-over risk, currency/exchange rate risks, sudden-stop risks (sudden loss of demand for Government securities) and interest rate risks,

needs to be monitored and managed.

8. Roll-over/ Refinancing Risk: A conscious strategy of elongating maturity with a view to reduce roll-over risk has been adopted so far. To alleviate the redemption pressures in less than 10 years' maturity buckets in future and further moderate roll-over risk, the share of securities having residual maturity of less than 10 years would be brought down to 55 per cent from the present level of about 58 per cent (including special securities) by the fiscal year 2020-21. This will be achieved by issuing more long-term securities and undertaking switches/buybacks from less than 10 years' maturity buckets. The issuance strategy with a focus on moderating issuances in less than 10 years' maturity buckets while increasing issuances in 10-14 years' maturity bucket, which is quite popular due to robust demand from banks and other market participants, and increased issuances of bonds in tenors of more than 15 years to cater to needs of insurance companies and provident funds, would continue. During 2017-18, switch

transactions amounting to ₹ 58,075 crore and buy-back transactions worth ₹ 41,555 crore were conducted. For the fiscal year 2018-19, the Government has budgeted ₹ 71,941 crore for buy-back and ₹ 28,059 crore for switches to reduce redemption pressure from the proximate maturities of G-Secs. This strategy will be continued in the near future as well to reduce the redemption concentration. Switch operations involving switching of short-tenor bonds with long-tenor bonds would be conducted in consultation with market participants with a focus on effective liability management.

9. Currency Risk: Achieving an appropriate mix of domestic and foreign currency debt portfolio is desirable under favourable circumstances. However, India being a comparatively higher inflation country, the Rupee generally remains a depreciating currency. Presently almost all sovereign external loans are availed from multilateral and bilateral sources and are long-term loans. Majority of such loans are for infrastructure/ social sector projects. Improving access to foreign investors in domestic G-Sec market would be guided by the need to widen the investor base while also considering the policy stance of using a calibrated approach to capital account convertibility which helps to minimise the potential risk of interest rate and exchange rate volatility arising as a result of unfavourable global developments.

10. Interest Rate Risk: Issuance of a variety of instruments of varying features and maturities such as floating rate bonds (FRBs), fixed coupon bonds, inflation indexed bonds (IIBs) and sovereign gold bonds to cater to the preferences of different investors would continue to create wide and well-diversified investor base for G-Secs. In India, although instruments such as, FRBs and IIBs have been issued, the contribution of such linker bonds has remained small, thereby limiting interest rate risk in the debt portfolio. For the issuer, floating rate instruments carry interest rate risks on re-fixing

while they enable market participants to diversify their portfolio. To meet the market demand while also taking into account the interest rate risk associated with these bonds, the issuance of floating rate instruments will be taken up depending on the market conditions.

11. Commodity Price Risk: During Nov 2015, the Central Government launched the Sovereign Gold Bonds Scheme (SGB) to reduce demand for physical gold by providing an alternative investment instrument linked to gold prices. The bond's redemption price is linked to price of gold on maturity. The investment limit was enhanced to 4 Kg per fiscal year for individuals and Hindu Undivided Family (HUF) and 20 Kg per fiscal year for Trusts and similar entities during 2017-18. Notwithstanding several positive features of SGBs, the Government is exposed to market/price risk on these bonds due to gold price movements. The Gold Reserve Fund has been created to provide a cushion to insulate the Government in a limited way from increase in gold prices at the time of redemption. However, the size of the Fund may be inadequate, as a cushion against price volatility in exceptional circumstances. Keeping in view the need to minimise potential price risk in a situation of higher gold price at the time of redemption, SGB issuances are limited to 2 per cent of annual gross issuance size of Government debt subject to an absolute limit of about 1 per cent of total outstanding G-Secs (at the end of preceding fiscal year) which will be adhered to.

Strategic Benchmark indicators of debt portfolio

12. A strategic benchmark represents the desired structure or composition of a debt portfolio in terms of characteristics such as interest rate, currency mix, overall maturity, etc. It is a management tool for the Government to evaluate its risk tolerance and clarify its portfolio preferences with regard to expected cost, market risk, roll-over risk and investor concentration risk. The current debt

Debt Management Strategy of Central Government

structure which has been created over time is low on risk. The benchmarks that are set for the current MTDS period are designed to ensure that the debt structure risk remains low while cost is minimised. The strategic benchmarks set are as under:

a) Share of Short -Term Debt30

13. The share of short-term debt will be kept within 10 per cent of total debt. As there may be unforeseen developments which could necessitate higher issuance of short-term paper, a leeway of \pm 3 per cent has been maintained (Table 3.1).

| Table 3.1: Benchmark share of Domestic Market Short-Term Debt | | | | |
|---|----------------------|-----|--|--|
| Indicator | Leeway (in per cent) | | | |
| 1 | 2 | 3 | | |
| Domestic Marketable Debt- Short-term | 10 | ± 3 | | |

b) Average Maturity of Debt

14. In line with the strategy of elongating maturity,

after considering the risk-cost associated with it, the proposed benchmark for average maturity of the debt portfolio is given in Table 3.2.

| Table 3.2: Benchmark of Weighted Average Maturity of Debt | | | | |
|---|---------------|----------------------|--|--|
| Indicator | Benchmark (in | Leeway (in years) | | |
| 1 | years) | (in years) | | |
| Weighted Average Maturity of Debt | 10 | ± 2 | | |

c) Issuance Limits

15. To ensure that debt roll-over is within manageable levels every year, the upper issuance limits for maturity buckets and also for an individual security in a particular maturity bucket during the year are capped. This limit is calculated on the basis of a sustainable debt trajectory, projected increase in debt stock, Government's cash flow imperatives, etc. The limits are reviewed periodically keeping in view the macroeconomic environment and repaying capacity of the Government. In view of large borrowing

programme and to ensure supply of securities across the yield curve, the limits could be enhanced incrementally in a calibrated manner.

d) Indexed and Floating Debt

16. Keeping in view the portfolio diversification benefits associated with issuance of IIBs and FRBs and also to cater to the market demand, a target share of indexed debt and FRBs has been fixed, subject to market conditions and emergent demand for better investor participation. The targeted benchmark share is as given in Table 3.3.

| Table 3.3: Benchmark Share of FRBs and Inflation Indexed Bonds | | | | | |
|--|----------------------|-----|--|--|--|
| Indicator | Leeway (in per cent) | | | | |
| 1 | 2 | 3 | | | |
| Indexed and Floating Debt | 7 | ± 4 | | | |

³⁰ Short-term is defined as the debt maturing in next 12 months.

e) Share of External Debt in total debt

17. Low share of external debt in total debt portfolio insulates the sovereign debt from currency risks. External debt can be a cheaper source of funds and can reduce the overall interest

burden of the Government. However, the risks associated with it need to be analysed before taking any final decision in the matter. The benchmark for external debt is as given in Table 3.4.

| Table 3.4: Benchmark Share of External Debt | | | | | |
|---|---|---|--|--|--|
| Indicator | Leeway (in per cent of total public debt) | | | | |
| 1 | 2 | 3 | | | |
| External debt 7 ±3 | | | | | |

Compliance to DMS

18. The market borrowing program during 2017-18 was planned and executed in terms of Debt Management Strategy (DMS) published in February 2018, the evolving market conditions and shape of yield curve. An analysis of debt structure and risk parameters indicates that the short-term debt, average maturity of debt, and the ratio of domestic to external debt remained within the limits set by DMS document while the share of indexed and floating debt was slightly higher than the upper limit set for this benchmark. The details, as on March 31, 2018, are given in the Table 3.5 below.

| Table 3.5: Current S | Table 3.5: Current Status <i>vis-à-vis</i> Benchmarks | | | | | | |
|--|---|-----------------|-----------------|--|--|--|--|
| | Benchmark | Leeway | Current status | | | | |
| Share of Domestic Short-Term Marketable | | | | | | | |
| Debt to Outstanding Internal Marketable | 10 per cent | +/-3 per cent | 9.80 per cent | | | | |
| Debt stock | | | | | | | |
| Weighted Average Maturity of Outstanding | 10 years | + / -3 years | 10.62 years | | | | |
| Stock of Dated Securities | 10 years | 1 / -3 years | 10.02 years | | | | |
| Share of Indexed and Floating Debt in total | 7 per cent ** | + / -2 per cent | 11.44 per cent# | | | | |
| marketable debt issued during FY 18 | / per cent | 1 / -2 per cent | 11.44 per cent# | | | | |
| Share of External Debt in total outstanding | 8 per cent | + / -3 per cent | 7.01 per cent | | | | |

| # including issuance through switch transaction | | | | | | | |

Market Development

19. A well-developed G-Sec market is essential for the successful borrowing programme of the Government. A well-developed market would price debt efficiently i.e., at the lowest possible cost thus helping the Government to reduce its borrowing cost in the long run. Given this, the development of G-Sec market remains a major debt management objective. Building benchmark securities across the yield curve helps towards the development of G-Sec market. Towards this objective, the

Government has launched 2 and 5-year benchmark securities in the year 2018-19. Issuance of more benchmarks will be explored in due course, in consultation with the market participants. These benchmark securities also provide reference yields to other segments of the debt market.

20. Market liquidity impacts the yields in the market and thus poses interest rate risk for the Government as borrowing towards financing gross fiscal deficit (GFD) and roll-over of the redemption amount happen at the prevailing market yields. The

liquidity in the G-Sec market had improved significantly in the last few years as can be seen from the higher trading volumes, low impact cost and improvement in turnover ratios. However, since August 2017, there has been some stress in the market which has affected the trading volumes as well as demand across the securities. Other factors, both external and internal, have also affected the G-Sec market.

21. Going forward, it would be desirable to improve the liquidity in G-Sec market and also broad-base the same in order to minimise the interest rate risk emanating from illiquidity premium for Government debt. Measures to improve the liquidity in G-Sec market would include steps to consolidate issuances, further enhance transparency in issuance process to enable investors plan their investments, building critical mass or sufficient outstanding stock under a given security to enable a healthy trading in G-Secs Strategically, Primary Dealer system will be effectively used for both primary and secondary market development. Market-making in identified semi-liquid securities, initiated in 2016, will be further expanded to improve liquidity in more securities.

22. The MTDS faces risks, both on demand and supply fronts. On the supply side, the Government may be required to borrow more in case of unforseen shortfall in revenues on account of slowdown in economy due to global factors. This may keep market borrowings at elevated levels. Increased reliance on market borrowings by States is also adding to the supply of G-Secs to the market. However, the growth in the banks' deposits has not been high enough to absorb higher supply smoothly. But the commitment shown by the Government to adhere to FRBM limits will keep the supplies under check. On the demand side, the phased reduction in SLR requirements for the banks may cast an adverse influence on demand for G-Secs from the banking sector. A gradual increase in Liquidity Coverage Ratio (LCR) requirements was expected to create more demand for G-Secs. However, the RBI has been allowing increased carving out of SLR securities for computing their LCR requirements which will affect the additional demand from the banking system. The framework to gradually increase limits for FPIs in G-Secs through a predictable mechanism wherein the limits are linked to outstanding stock of G-Secs is expected to support Government borrowings. Notwithstanding the demand side concerns, it may be mentioned that the institutional investor base for G-Secs has diversified reasonably in the last few years with the entry of co-operative banks, regional rural banks, pension funds, mutual funds and nonbanking finance companies. Furthermore, recent measures to augment investor base by promoting retail participation in Government securities, announcement of clear roadmap for FPIs and enhancement of limits for FPIs, enabling noninstitutional investors to participate in primary auctions through non-competitive route, introduction of odd-lot trading, improved trading of G-Secs on stock exchanges; mandating retail/ mid-segment targets for primary dealers, webbased trading access to gilt account holders are expected to enhance the demand for Government securities. Frictions arising from demand and supply imbalances would be appropriately addressed by modulating the issuance strategy during the MTDS period while adhering to the broad pillars of low cost, risk mitigation and market development.

Actions to be taken for implementing the Strategy objectives

- 23. In order to achieve the objectives of MTDS for 2018-19 to 2020-21, the following actions will be taken.
- a) Carry forward transparent issuance process by providing predictable borrowing programme to investors;
- b) Having continuous investor interaction and

- consultations with other stakeholders to keep their views and suggestions in view while finalising borrowing programme;
- c) To build more benchmarks of commonly desired tenors like 7 years and 12 years by issuing sizeable volumes under them and in the process also take advantage of liquidity premium;
- d) Elongate the maturity of the debt portfolio;
- e) Build a balanced maturity profile and supply along the yield curve with a view to have a smooth and slightly upward rising yield curve.
- f) To issue a variety of instruments such as inflation linked bonds, floating rate bonds that would help the investors to manage their portfolio more efficiently;
- g) To continue with rationalisation of interest rates on small savings schemes and other instruments like PF, special securities, etc. in line with the interest rates prevailing in the

- economy
- h) Continue development of domestic investor base and calibrated opening of the Government securities market to foreign investors and retail investors;
- Continue passive consolidation with large benchmark issuances and active consolidation through buy-backs/switches/conversions for effective liability management;
- Economic Affairs, engaged in the negotiations of external loans as regards cost, tenure, currency, etc. with a view to help them arrive at the best terms of external loans and monitor developments in both domestic and global foreign exchange markets;
- k) Diversify the investor base and encourage retail and mid-segment investors' participation in G-Sec market.

Appendix

MTDS SCENARIO ANALYSIS

Assumptions

Scenario analysis for the MTDS is worked out for the period 2018-19 to 2020-21 based on the outstanding Govt. debt stock as on end-March 2018 and likely path of debt management operations. The key assumptions are as follows:

- a) External debt forms only 7.01 per cent of public debt at end-March 2018. It represents liabilities mostly from multilateral and bilateral agencies which are contracted at reasonable/ low rates and have long tenure. Besides, the present level of international foreign exchange reserves provides adequate cushion to meet external funding needs in extreme cases.
- b) The Union Budget for 2018-19, through the Medium-Term Fiscal Policy Statement (MTFPS), has provided that Government of India (GoI) would be on the fiscal consolidation path by gradually reducing the Gross Fiscal Deficit (GFD). As per the MTFPS, GFD is estimated to decline to 3.3 per cent, 3.1 per cent and 3.0 per cent for 2018-19, 2019-20, and 2020-21, respectively. Nominal GDP is expected to grow by 11.6 per cent in 2018-19. With gradual growth acceleration and under the assumption of continuing price stability, the growth rate of GDP at current market prices during 2019-20 and 2020-21 is estimated to be 11.8 per cent and 12.3 per cent, respectively (MTFPS, Union Budget 2018-19).

- c) Domestic inflation, as measured by combined CPI inflation, is expected to follow the inflation targeting path adopted by the Reserve Bank. For 2018-19, the CPI inflation (excluding the HRA impact) is estimated at 3.7 per cent in Q2 and in the range of 3.8-4.5 per cent in the second half of FY 2018-19, as per the 4th bi-monthly monetary policy statement of RBI released on Oct 5, 2018. (Source: RBI Bi-Monthly monetary policy statement, October 2018).
- 2. Borrowing cost in the domestic market remained high during the current FY 19 till October, 2018, reflecting the impact of both domestic and global factors, which among others included, rising crude oil prices, rising US treasury yields, hike in the policy rate by the Reserve Bank of India, depreciating rupee and FPI outflows. However, a correction in crude oil prices and domestic inflation rate is expected to have a moderating effect on G-Sec yields in the remaining part of FY 19. The Government has already decided to reduce its gross market borrowings by ₹70,000 crore in FY 2018-19.
- 3. With these assumptions acting as the base for a baseline scenario, net market borrowings as a proportion of GDP is expected to fall from 2.34 per cent in 2017-18 to 1.99 per cent in 2020-21 reflecting the impact of fiscal consolidation as envisaged in the MTFPS (Table A1). Average Time to Maturity (ATM) is expected to increase from 10.6 years in 2017-18 to 12.45 years in 2020-21. The weighted average interest cost of outstanding debed securities is expected to increase from 7.85 per cent in 2017-18 to 7.97 per cent in 2020-21 under the Baseline Scenario.

Table A1: Baseline Projections for Fiscal Deficit, Cost, ATM, Borrowings and Repayment

| Year | GDP Growth (%) | GFD/ GDP (%) | Weighted Average Interest Cost (%) | ATM (years) | Gross Borrowings (₹ crore) | Repayments (₹ crore) | Net Market Borrowings (₹ crore) |
|---------|----------------------|--------------------|------------------------------------|-------------|----------------------------------|-------------------------|---------------------------------------|
| 2015-16 | 8.71 | 3.90 | 8.08 | 10.5 | 585000 | 144375 | 403099 |
| 2016-17 | 10.8 | 3.50 | 7.99 | 10.65 | 582000 | 174846 | 347497 |
| 2017-18 | 10.0 | 3.50 | 7.85 | 10.62 | 588000 | 156606 | 392176 |
| 2018-19 | 11.60 | 3.30 | 7.86 | 10.80 | 535000 | 163200 | 371800 |
| 2019-20 | 11.80 | 3.10 | 7.93 | 11.70 | 674068 | 250000 | 424068 |
| 2020-21 | 12.30 | 3.00 | 7.97 | 12.45 | 714789 | 248000 | 466789 |

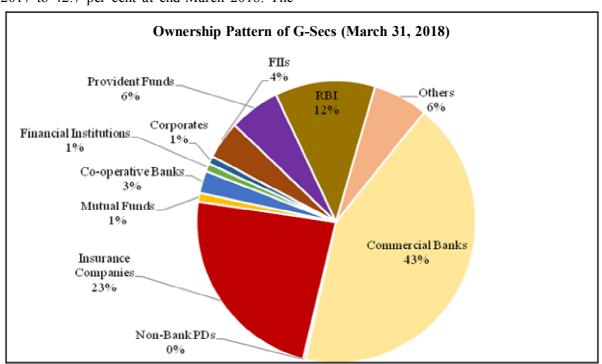

Note:

- (1) Data till 2017-18 are actual values while data for subsequent years are estimates.
- (2) Market borrowings are through issuance of dated G-Secs of more than one year tenor.
- (3) In line with the Union Budget 2018-19 estimates and Medium Term Fiscal Policy Statement (MTFPS), 2018-19, GDP at current market prices is assumed to grow by 11.6 per cent, 11.8 per cent and 12.3 per cent during 2018-19, 2019-20 and 2020-21, respectively.
- (4) Gross market borrowings are calculated based on the fiscal deficit target envisaged in the MTFPS.
- (5) Projections relate to 2018-19, 2019-20 and 2020-21.
- (6) Weighted average cost and maturity has been estimated based on the outstanding stock of dated securities and projected fresh market borrowings in line with the assumptions given above.

Demand Assessment

4. Banking sector holds the largest share of the total outstanding Government dated securities. The holding pattern of Central Government securities indicates an improvement in the share of commercial banks from 40.5 per cent at end-March 2017 to 42.7 per cent at end-March 2018. The

holding pattern of G-Secs as on March 31, 2018 is given in the Chart below. Gradual reduction in SLR requirement for the banks and allowing them to reckon a higher percentage of securities from their SLR portfolio towards their LCR requirements will have a bearing on the demand for G-Secs from the banking sector.

Debt Management Strategy of Central Government

5. Notwithstanding a slowdown in first-year premium collections, life insurers will continue to be a major investor segment from the demand side. As the growth process is likely to remain strong, it is expected that there will be more investible surplus with other investor-categories like provident funds, mutual funds, corporates, retail investors, etc. While the shares of RBI, Mutual funds and Provident funds in G-Secs decreased during 2017-18, the RBI's share is expected to go up as it undertakes a large number of Open Market (purchase) Operations in 2018-19 in view of tight liquidity conditions prevailing in the market, besides leading to replacement demand from other sectors.

Borrowing Strategy

6. Borrowing strategy has been prepared in such a manner that the maturity profile is elongated to reduce redemption pressures in the near term, while meeting the market demand for G-Secs of different maturities. Due to demand from market and also

to provide proper short-term benchmarks for other segments of debt market, bonds of 2 and 5-years tenor are being issued in FY 19, which will have an effect on the maturity profile of the G-Sec portfolio. There is high demand for securities in the '10-14 years' bucket, the proportion of borrowing in this bucket will continue to be high (Table A2) even as its share in total issuances of dated securities during FY 19 so far has declined relative to that in the previous years. Based on the evolving market conditions and the shape of yield curve, the issuances of longer-tenor securities will be marginally raised in 2018-19 and beyond. The shares of short-tenor (less than 5 years, 5-9 years) and medium-tenor (10-14 years) securities have been appropriately adjusted within the overall strategy of elongation of maturity while also issuing short-term benchmark securities. Depending upon the evolving market conditions and GoI's requirements, the strategy of elongation of maturity would be furthered.

| Table A2: Borrowing Strategy for G-Secs | | | | | | | |
|---|-----------------------------|---------|---------|---------|---------|--|--|
| (per cent to total) | | | | | | | |
| Actual Estimates | | | | | | | |
| Maturity Bucket | 2016-17 | 2017-18 | 2018-19 | 2019-20 | 2020-21 | | |
| Less than 5 years | 0.0 | 0.0 | 8.6 | 9.0 | 9.0 | | |
| 5-9 years | 18.6 | 19.7 | 21.5 | 21.0 | 21.0 | | |
| 10-14 years | 52.1 | 50.4 | 29.9 | 30.0 | 30.0 | | |
| 15-19 years | 14.1 | 13.5 | 15.3 | 15.0 | 15.0 | | |
| 20 years and above | re 15.3 16.5 24.7 25.0 25.0 | | | | | | |
| Total | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 | | |

Public Debt Profile under different scenarios

7. Under the Baseline Scenario, 'Market Debt-to-GDP (dated securities)' and 'Total Public Debt-GDP' ratios would fall from 30.64 per cent and 41.04 per cent in 2017-18 to 27.24 per cent and 38.06 per cent, respectively in 2020-21. The ratio

of interest expense to GDP for market borrowings and gross borrowings³² are projected to decline from 2.40 per cent and 3.16 per cent in 2017-18 to 2.17 per cent and 2.86 per cent, respectively in 2020-21. If the MTFP path announced in the budget 2018-19 is adhered to, there would be an improvement in the debt sustainability indicators.

³¹ Includes GFD+ repayment of debt during the year.

| Table A3: Debt Sustainability Indicators (Baseline Scenario) | | | | | | |
|--|---|----------------------------------|--|---|--|--|
| (in per cent) | | | | | | |
| Year | Market Debt (dated securities) / GDP | Total Public Debt / GDP | Interest (Market Borrowings / GDP | Interest (Gross Borrowings / GDP | | |
| 2016-17 | 30.91 | 40.32 | 2.47 | 3.17 | | |
| 2017-18 | 30.64 | 41.04 | 2.40 | 3.16 | | |
| 2018-19 | 29.44 | 39.38 | 2.31 | 3.08 | | |
| 2019-20 | 28.36 | 38.50 | 2.25 | 2.97 | | |
| 2020-21 | 27.24 | 38.06 | 2.17 | 2.86 | | |

8. Two alternate scenarios have been envisaged. The first scenario assumes adverse economic conditions where economic growth slips below the projections given in the MTFPS. Such a scenario may lead to slippage

in the fiscal correction path from that envisaged in the MTFPS. In the first scenario, nominal GDP is assumed to grow at the rate of 11.0 per cent, 11.2 per cent and 11.5 per cent during 2018-19, 2019-20 and 2020-21, respectively (Table A4).

SCENARIO I:

| Table A | Table A4: Scenario I: Projections for Fiscal Deficit, Cost, ATM, Borrowing and repayment | | | | | | |
|---------|--|------------------------------|--|----------------|--|----------------------------|---------------------------------------|
| Year | GDP Growth (per cent) | GFD /GDP (per cent) | Weighted Average Interest Cost of outstand ing dated securities (per cent) | ATM (years) | Gross Market Borrowings (₹ crore) | Repay ment (₹ crore) | Net Market Borrowings (₹ crore) |
| 2016-17 | 10.80 | 3.5 | 7.99 | 10.65 | 582000 | 174846 | 407154 |
| 2017-18 | 10.00 | 3.5 | 7.85 | 10.62 | 588000 | 156606 | 431394 |
| 2018-19 | 11.00 | 3.5 | 7.87 | 10.87 | 613293 | 163200 | 450093 |
| 2019-20 | 11.20 | 3.8 | 8.00 | 11.80 | 780162 | 250000 | 530162 |
| 2020-21 | 11.50 | 4.0 | 8.12 | 12.59 | 881598 | 248000 | 633598 |

 $Weighted\ average\ cost\ and\ maturity\ relate\ to\ outstanding\ stock\ of\ dated\ securities.$

9. In case of lower than the projected GDP growth in the MTFPS, the GFD is likely to go up as revenues will be lower than the estimates with gap to be bridged by higher borrowings. Under this scenario, the GFD-GDP ratios for 2018-19, 2019-20 and 2020-21 have been assumed at 3.5 per cent, 3.8 per cent and 4.0 per cent, respectively. Higher market borrowings may lead, other things remaining unchanged, to increase in interest rates. It is assumed that interest rate would increase by 40 bps and 30 bps on fresh market borrowings in 2019-20 and 2020-21, respectively. As a result, the weighted average cost of borrowing increases to 8.12 per cent in 2020-21 as compared to 7.97 per

cent in the same year under the Baseline Scenario. Average time to maturity is also expected to increase to 12.59 years in 2020-21 as compared to 12.45 years in the Baseline scenario (Table A4). However, borrowing strategy is assumed to be the same as envisaged in the Baseline Scenario.

10. Under Scenario I, 'Debt-to-GDP (dated security)' and 'Total Public Debt-GDP ratio' would be higher at 28.73 per cent and 38.44 per cent as compared to 27.24 per cent and 38.06 per cent under the Baseline Scenario for the year 2020-21, reflecting the adverse effect of higher borrowings. The ratio of interest expense to GDP for market borrowings and gross borrowings are projected to

Debt Management Strategy of Central Government

increase from 2.17 per cent and 2.86 per cent in and 2.91 per cent in the same year under 2020-21 in the Baseline Scenario to 2.24 per cent Scenario I (Table A5).

| Table A5: Scenario I: Debt Sustainability Indicators | | | | | |
|--|----------------------|----------------------------|---|---------------------------------------|--|
| | | | | (in per cent) | |
| Year | Market debt / GDP | Total Public Debt / GDP | Interest (Market Borrowings/ GDP | Interest (Gross Borrowings/ GDP | |
| 2016-17 | 30.91 | 40.32 | 2.38 | 3.17 | |
| 2017-18 | 30.64 | 41.04 | 2.30 | 3.16 | |
| 2018-19 | 29.86 | 39.49 | 2.26 | 3.08 | |
| 2019-20 | 29.24 | 39.20 | 2.25 | 2.99 | |
| 2020-21 | 28.73 | 38.44 | 2.24 | 2.91 | |

SCENARIO II:

11. In the second scenario, the impact of interest rate risk has been analysed while keeping the GDP growth rates at the levels equal to those in the scenario I. Interest rates for fresh borrowings for 2019-20 and 2020-21 have been assumed 110 bps and 140 bps higher than the Baseline Scenario. Increase in cost of fresh borrowings will also lead

to increase in GFD. It is assumed that GFD-GDP ratios for 2019-20, 2020-21 will marginally increase to 3.85 per cent and 4.1 per cent, respectively. Under the Scenario II, the ratios of interest expense to GDP for market borrowings and gross borrowings are projected to increase to 2.35 per cent and 2.94 per cent, respectively in 2020-21 from 2.17 per cent and 2.86 per cent given under the Baseline Scenario. (Table A6).

| Table A6: Scenario II: Debt Sustainability Indicators | | | | | |
|---|---|-------|------|---------------|--|
| | | | | (in per cent) | |
| Year | Year Market Debt / GDP Total Public (Market Borrowings / GDP) | | | | |
| 2016-17 | 30.91 | 40.32 | 2.38 | 3.17 | |
| 2017-18 | 30.64 | 41.04 | 2.30 | 3.16 | |
| 2018-19 | 30.06 | 39.67 | 2.28 | 3.08 | |
| 2019-20 | 29.70 | 39.28 | 2.31 | 3.03 | |
| 2020-21 | 29.46 | 38.50 | 2.35 | 2.94 | |

12. As can be seen, there will be an adverse effect on debt portfolio in case there is a slowdown in the GDP growth and resultant rise in GFD. Similarly, increase in interest rate in the market will make the borrowing costly for the Government with higher interest payments in future, which will again give rise to higher borrowings in the coming years. However, the Baseline scenario is expected to be somewhat closer to the reality.

Annex 1: Debt Position of the Central Government
